EXECUTIVE SUMMARY

A Level I contamination analysis has been performed and a Contamination Screening Evaluation Report has been prepared in accordance with the Florida Department of Transportation's (FDOT) Project Development and Environment (PD&E) Manual, Part 2, Chapter 22, dated February 8, 1994.

Roadway improvements are proposed for the project corridor, a distance of approximately 11.5 miles. Nineteen (19) sites within the project corridor were identified as having the potential for contamination impacts to the planned project. These sites were evaluated and rated either **No**, **Low**, **Medium** or **High** for having potential petroleum or hazardous materials contamination. Ten (10) sites were rated **No**, five (5) sites were rated **Low**, and four (4) sites were rated **Medium**.

A total of 19 facilities have been identified as potential pollution sources within the limits of the project corridor. Of these 19 facilities, only 9 facilities were determined to have potential or documented discharges, and/or received violations by a regulatory agency. The remaining 10 facilities were determined to pose no threat of environmental impacts to the project corridor based on the absence of documented discharges, no violations reported, the documented discharge has been cleaned up and/or are located >500 feet from the project corridor. These 10 facilities have been assigned a rating of **No**, in accordance with the rating definitions. Five of the sites rated **Low**, four of the sites rated **Medium**, and no sites rated **High**, based on the information reviewed. The 9 sites that had documented discharges and/or violations were assigned a **Low** or **Medium** rating and are not likely to cause any contamination impacts to the project corridor. Based on the information identified and discussed in this report, no additional assessments or recommendations are warranted at this time.

1.0 INTRODUCTION

The objective of this report is to present information collected during file, literature and aerial photography reviews, regulatory database reviews and site investigations to determine the potential for encountering contamination within the proposed right-of-way (ROW) of Cobb Road from SR 50 north to US 98, then west on US 98 to the Suncoast Parkway. This report consists of detailed site data for known and potential hazardous/petroleum contamination sites along the roadway, presents recommendations regarding these sites, and discusses the potential impact of these sites on the selection of a recommended alternative for the project.

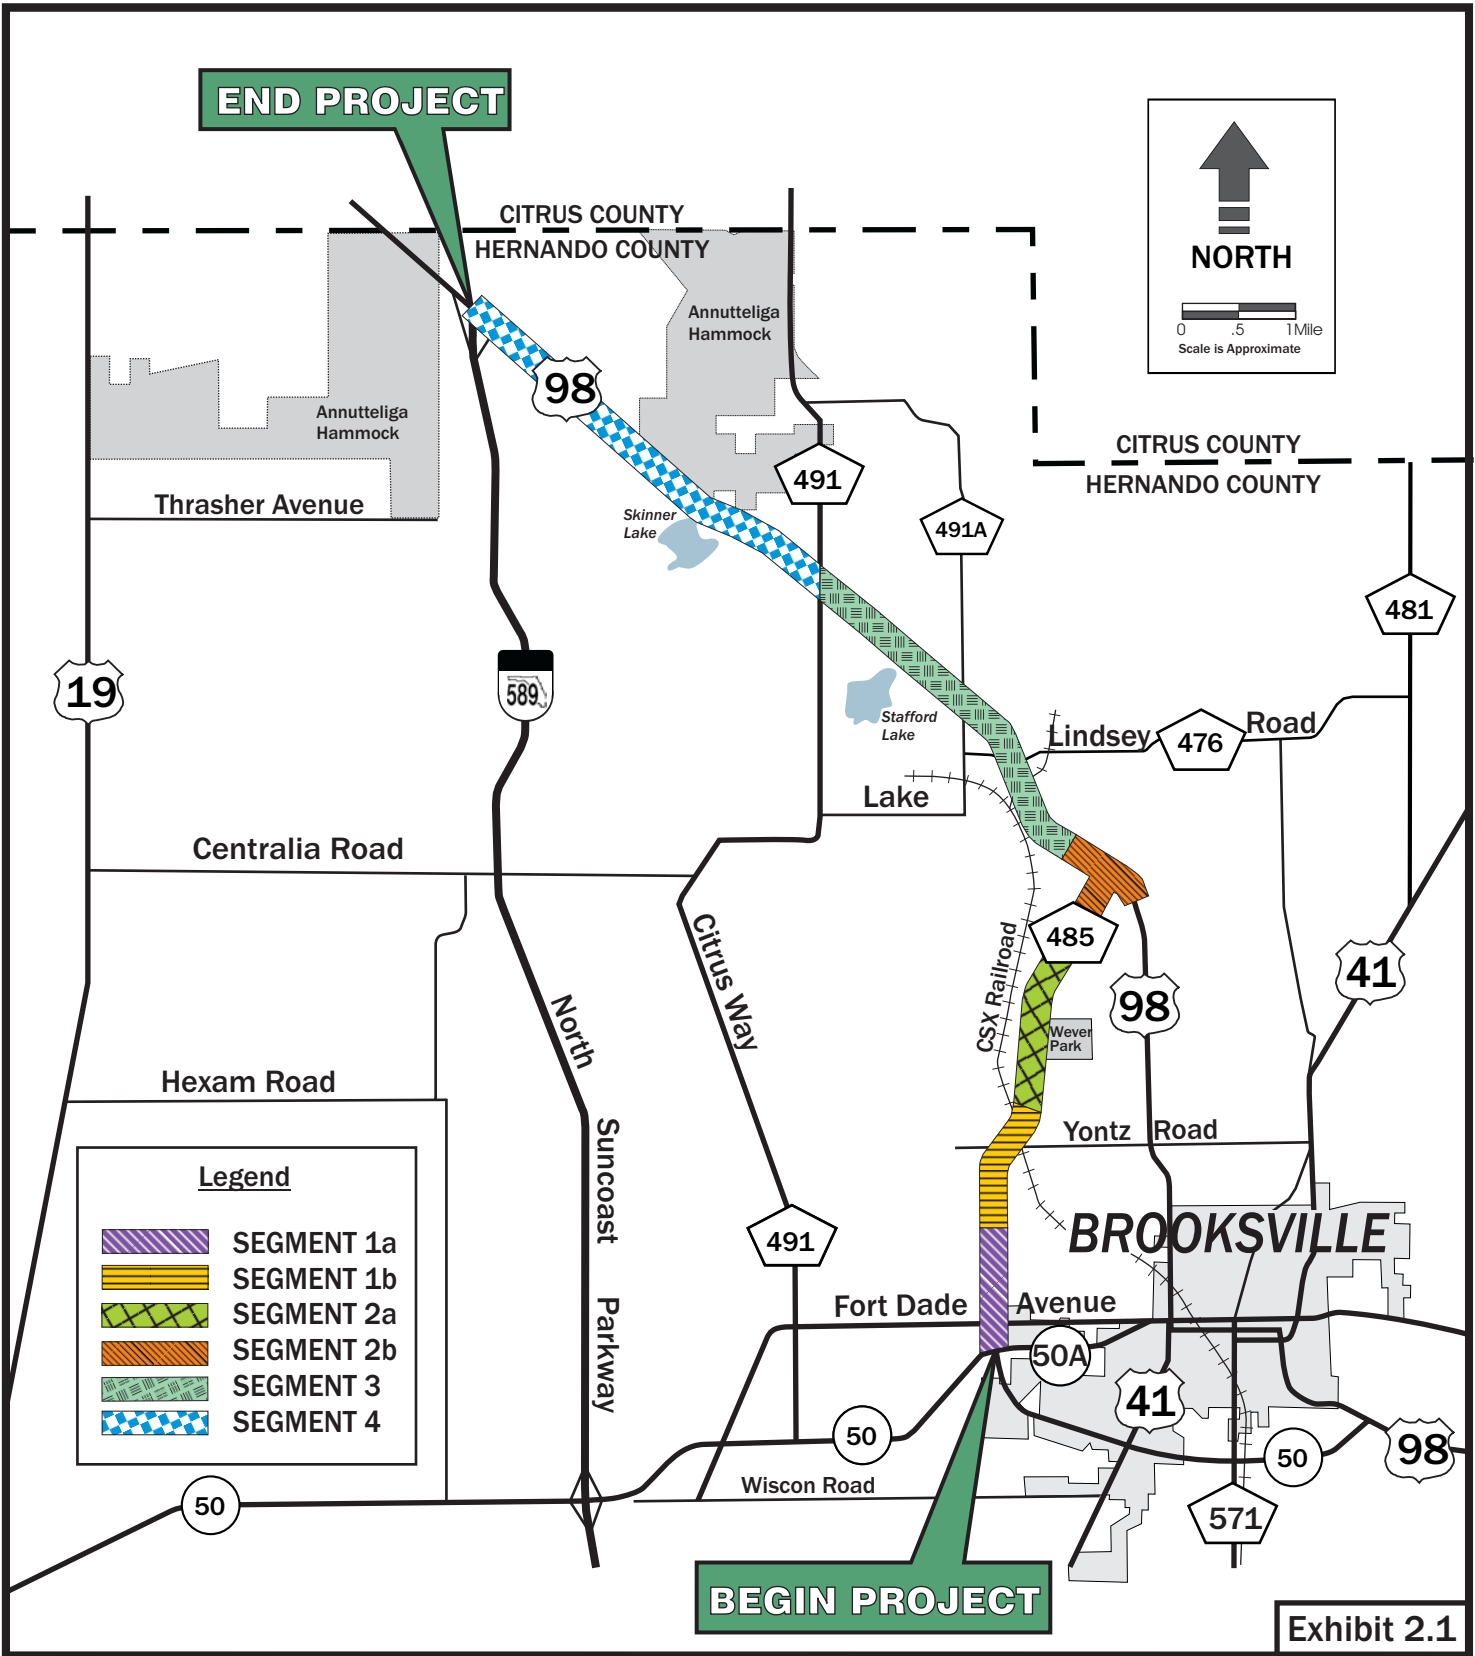

Roadway improvements are proposed for the project corridor, a distance of approximately 11.5 miles. Nineteen (19) sites within the project corridor were identified as having the potential for contamination impacts to the planned project. These sites were evaluated and rated either **No**, **Low**, **Medium** or **High** for having potential petroleum or hazardous materials contamination. Ten (10) sites were rated **No**, five (5) sites were rated **Low**, and four (4) sites were rated **Medium**.

2.0 PROJECT DESCRIPTION

The planned project will improve the capacity and safety of the existing two-lane Cobb Road (CR 485) and a portion of US 98 in Hernando County, Florida. The project study area begins on Cobb Road at SR 50 in the city of Brooksville and extends northward 4.5 miles to US 98. The study area then proceeds 7 miles westward along US 98 to the Suncoast Parkway. These segments of Cobb Road and US 98 are currently two-lane undivided rural arterials. The total length of the planned project is approximately 11.5 miles. **Exhibit 2.1** presents the location and segmentation of the project.

The existing Cobb Road / US 98 corridor provides traffic flow around the west side of the city of Brooksville, ultimately connecting SR 50 with the Suncoast Parkway (SR 589). Traffic growth in Hernando County and in the vicinity of the city of Brooksville will cause Cobb Road and US 98 to become congested if traffic capacity is not added to the system. The need to provide a safer designated bypass route around the city of Brooksville is vital, particularly for the large volume of truck traffic associated with three major rock mines and other industrial facilities situated along the project corridor.

Capacity and safety improvements to Cobb Road and US 98, along with the designation of Cobb Road as US 98, represents a long-standing goal of the City of Brooksville and Hernando County. This goal has been incorporated into the Hernando County Metropolitan Planning Organization's (MPO) *2025 Long Range Transportation Plan*, which calls for widening the existing roadways to a continuous four-lane divided, controlled access facility.

Project Location Map

Cobb Road (CR 485) / US 98 PD&E Study

WPI Segment Nos: 257299 1 & 405017 1
FAP Nos: 2891 007 P & 2891 008 P

3.0 STUDY ALTERNATIVES

3.1 Project Segmentation

For this PD&E Study, the project was divided into segments for analysis. The segments of Cobb Road were chosen based on surrounding characteristics such as land use and environmental constraints, as well as the potential need for realignments. The segments of US 98 were chosen to match FDOT resurfacing project limits for consistency. The project segmentation is shown on the Project Location Map presented previously in **Exhibit 2.1**. The segments of the project are identified as follows:

- Segment 1a: Cobb Road from north of SR 50 to north of the Brooksville Water Reclamation Facility (WRF) driveway
- Segment 1b: Cobb Road from north of the Brooksville WRF driveway to north of Yontz Road
- Segment 2a: Cobb Road from north of Yontz Road to south of US 98
- Segment 2b: Cobb Road/US 98 Intersection
- Segment 3: US 98 from north of Cobb Road to CR 491
- Segment 4: US 98 from CR 491 to Suncoast Parkway

3.2 Recommended Build Alternative

3.2.1 Segment 1a – Urban, Fit within Existing Right-of-Way

The proposed typical section for Segment 1a is an urban typical section consisting of two 12-ft. travel lanes in each direction, a 6-ft. sidewalk on the left (west) side and a 12-ft. shared use path on the right (east) side. This typical section utilizes a 17.5-ft. median and fits within the existing right-of-way width (minimum 100 ft.). The proposed design speed is 45 mph.

3.2.2 Segment 1b – Suburban Left

The proposed typical section for Segment 1b is a suburban typical section consisting of two 12-ft. travel lanes in each direction with 8-ft. outside shoulders (5 ft. paved) and a 12-ft. shared use path on the right (east) side. This typical section utilizes a 30-ft. median (22-ft. curb to curb and 4-ft. offsets to edge of inside travel lanes). The proposed minimum right-of-way width required is 158 ft. The proposed design speed is 55 mph. A left alignment is proposed for this segment.

3.2.3 Segment 2a – Suburban Left Transitioning to Rural Left

Two typical sections are proposed for Segment 2a. The proposed typical section for the portion of Segment 2a south of Youth Drive is a suburban typical section as described above in **Section 3.2.2**. North of Youth Drive, a transition would take place to a rural typical section consisting of two 12-ft. travel lanes, 8-ft. outside shoulders (5-ft. paved) and 6-ft. inside shoulders (4-ft. paved) in each direction and a 12-ft. shared use path on the right (east) side. The proposed minimum right-of-way width required is 240 ft. The proposed design speed is 70 mph. A left alignment is proposed for this segment.

3.2.4 Segment 2b – Rural Realign

The proposed typical section for Segment 2b is a rural typical section as described above in **Section 3.2.3**. This proposed rural typical section would be utilized on a new alignment to create a through movement between Cobb Road and US 98 to the north. The existing US 98 to the south would be realigned to a “T” intersection with the new alignment.

3.2.5 Segment 3 – Rural Left

The proposed typical section for Segment 3 is a rural typical section as described above in **Section 3.2.3**. A left alignment is proposed for this segment.

3.2.6 Segment 4 – Rural Left

The proposed typical section for Segment 4 is a rural typical section as described above in **Section 3.2.3**. A left alignment is proposed for this segment.

3.3 No Build Alternative

Under the No Build Alternative, no action would be taken with respect to improving Cobb Road and US 98 within the limits of the project study area. Based on the No Build Alternative having major deficiencies, it is not recommended.

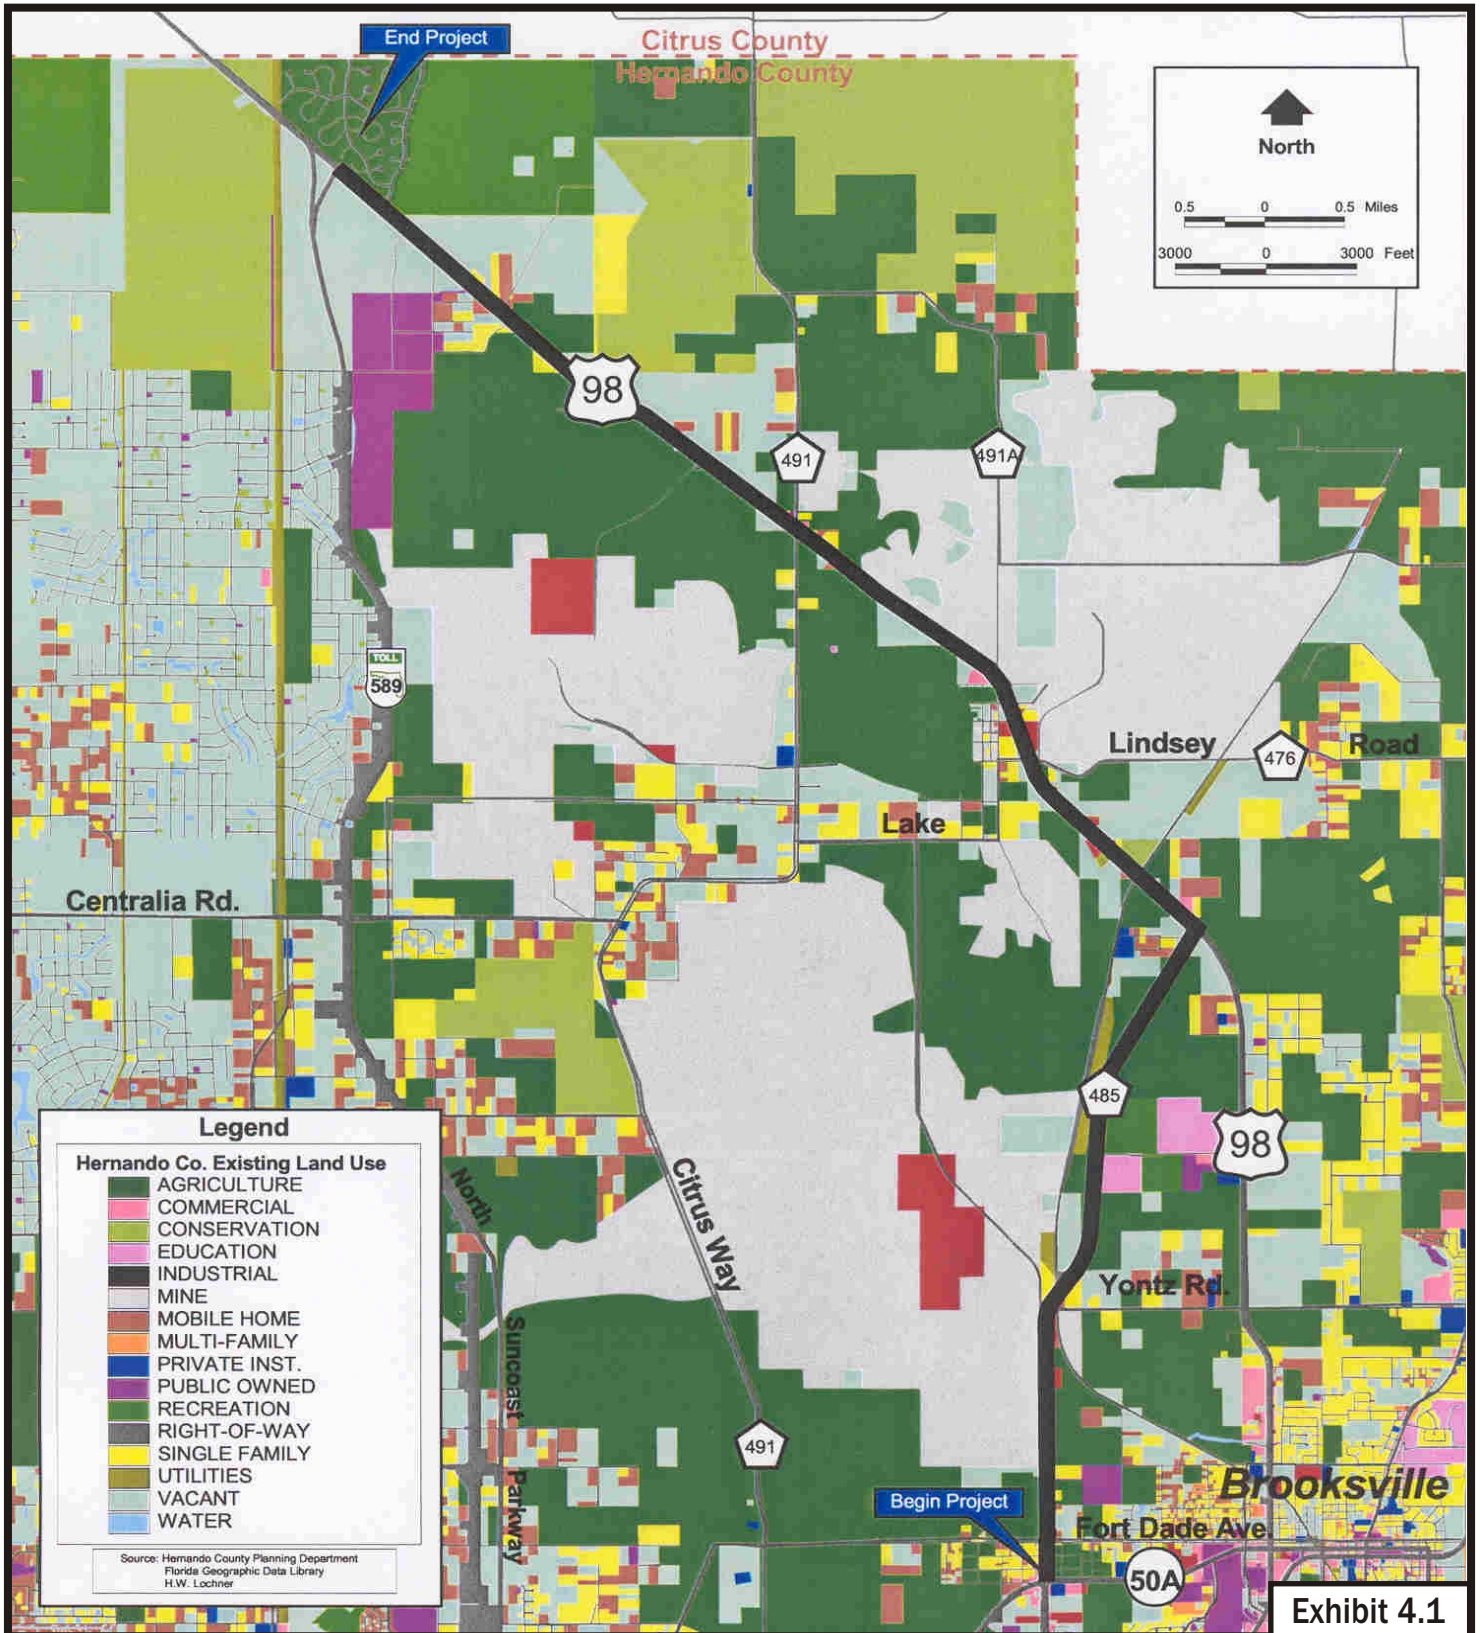

4.0 LAND USE

4.1 EXISTING LAND USE

The Hernando County Planning Department's existing land use map is presented in **Exhibit 4.1**. The predominant existing land uses in the study area are agricultural and mining. Agricultural designations are representative of large hay fields and active cattle pastures. Mining designations are representative of three major mining facilities located along the project corridor, including Florida Mining & Materials Corporation, Florida Crushed Stone Company and Florida Rock Industries, Inc. Industrial land uses also exist along the project corridor, representing several notable facilities, including Flagstone Pavers, Ewell Industries, Grubbs Construction, and Florida Concrete and Stone. Some scattered single-family residential and commercial uses are situated along the corridor, particularly in the southern portion. Vacant lands are also found along the project corridor. Recreational land uses include the Ernie Wever Youth Park adjacent to the D.S. Parrot Middle School and the private World Woods Golf course at the northern end of the project. Lands associated with the Annutteliga Hammock Conservation and Recreation Lands (CARL) on the north side of US 98 are designated as conservation lands in the County's land use mapping.

4.2 FUTURE LAND USE

The Hernando County Comprehensive Plan's future land use map is presented in **Exhibit 4.2**. The study area immediately adjacent to the Cobb Road segment of the project corridor is anticipated to undergo a developing transition towards industrial and residential land uses. This transition is underway with the plot approvals of a proposed industrial park just south of the D.S. Parrot Middle School. The majority of the study area along US 98 will remain as mining and rural land uses in the future, with commercial nodes at Lake Lindsay Road (CR 476), Citrus Way (CR 491), and the Suncoast Parkway. Residential land use is also anticipated near the Suncoast Parkway.

5.0 HYDROGEOLOGIC FEATURES

Hernando County is divided into four major physiographic regions. These regions include the Coastal Swamps, the Gulf Coastal Lowlands, the Brooksville Ridge and the Tsala-Apopka Plain. These physiographic areas are mainly a reflection of topographic relief and underlying sediments. The project corridor lies entirely within the Brooksville Ridge. The ridge area soils are a mixture of poorly drained to well drained, sandy to clayey soils. The Brooksville Ridge area overlies a clayey unit that varies between 10 and 30 feet in thickness, but allows good hydraulic connection to the underlying Floridan aquifer system by means of solution features and fractures. The depth to the water table varies throughout the Brooksville Ridge area, however, along the project corridor the depth to the water table likely ranges from approximately 20 feet to greater than 70 feet. Upon review of the topographic maps for the project corridor (“Brooksville, Fla.” and “Brooksville NW, Fla.”), the depth to the water table is likely to be the greatest near the intersection of Cobb Road and Yontz Road, where the topographic relief is highest (195 ft.). The topography of the project corridor can be seen in the EDR Report Site Map, **Appendix A**. The surface topography slopes downhill from Yontz Road south along Cobb Road to Fort Dade Avenue and gradually slopes down north from Yontz Road to Ponce De Leon Boulevard. The topography gently undulates west along Ponce De Leon Boulevard to the project end. The groundwater flow direction within the Upper Floridan Aquifer across the project corridor is to the northwest.

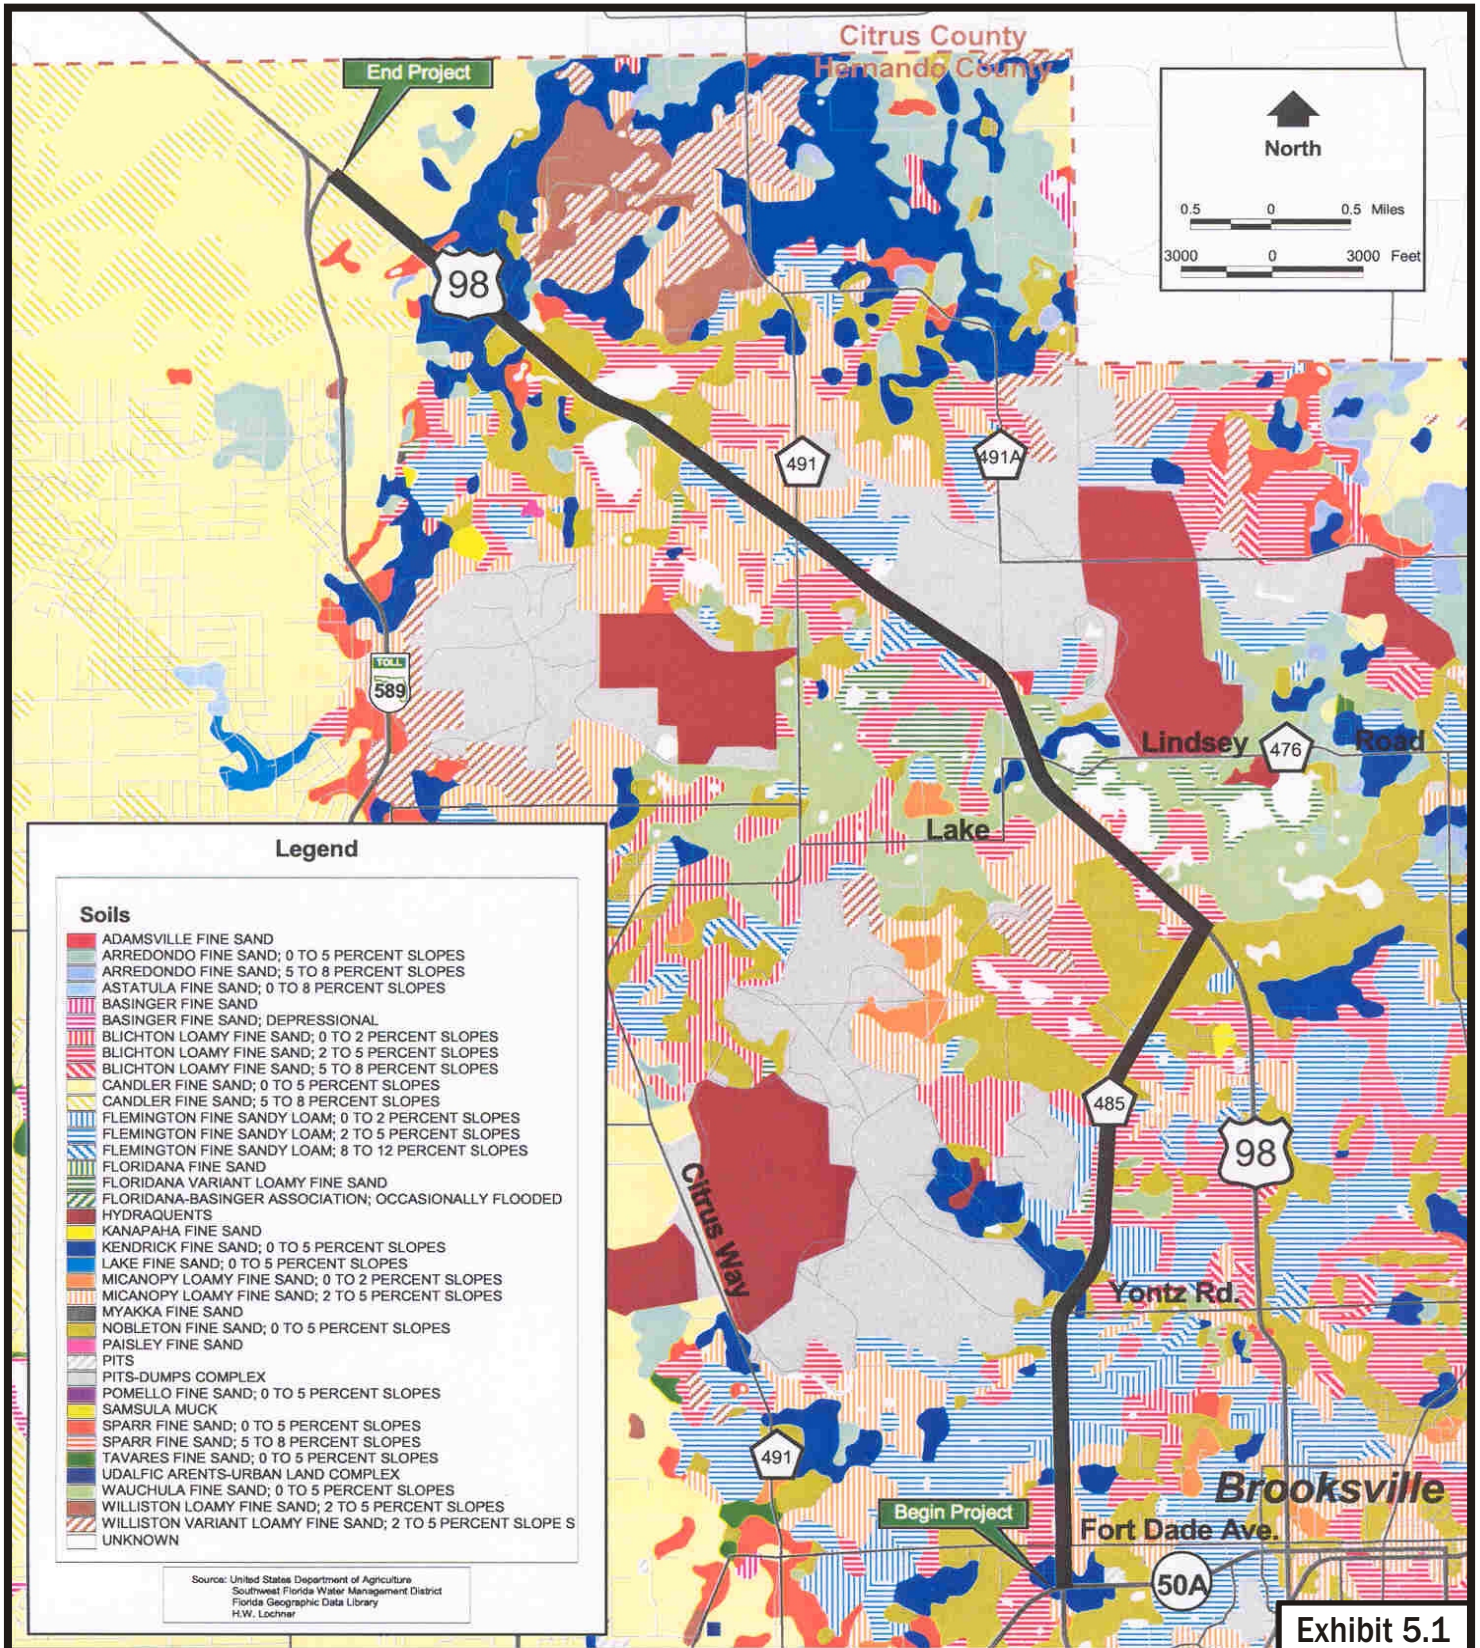

The existing drainage features for the project corridor include roadside swales. No stormwater or retention facilities were observed along the corridor. Surface water bodies observed along the corridor include a small shallow ponded area located on the west side of Cobb Road approximately ¼ to ½ mile north of Fort Dade Avenue; two small lakes (Tank Lake, Willow Prairie Lake) located on the north side of Ponce De Leon Boulevard halfway between the intersections with Lake Lindsey Road (C.R. 476) and Cobb Road; one large lake (Stafford Lake) located on the south side of Ponce De Leon Boulevard approximately ¾ mile west of Brittle Road; and one small, unnamed pond/lake located on the north side of Ponce De Leon Boulevard approximately 2 1/2 miles east of the project end.

It appears that most, if not all, of the structures (residences, commercial and industrial businesses, etc.) along the project corridor are serviced by private wells and septic systems. Buried phone utility markers were observed along the corridor while power utilities appeared to be overhead. A few stormwater culverts were observed in the roadside swales.

5.1 SOILS

According to the United States Department of Agriculture, Soil Conservation Service Soil Survey of Hernando County, Florida, two general soil types are located along the project corridor. General soil types found in the project corridor are presented in **Exhibit 5.1**.

The Nobleton-Blichton-Flemington soil association almost entirely covers the length of the corridor from the project beginning to approximately 3 miles east of the project end. This soil association consists of nearly level to strongly sloping, somewhat poorly drained and poorly drained soils of the uplands and flatwoods. The Arredondo-Sparr-Kendrick soil association encompasses approximately the last 3 miles of the project corridor. This soil association consists of nearly level to sloping, well drained and somewhat poorly drained soils of the upland ridge.

General Soils Map

Cobb Road (CR 485) / US 98 PD&E Study

 FAP Nos: 2891 007 P & 2891 008 P

6.0 METHODOLOGY

A Level I contamination analysis has been performed and a Contamination Screening Evaluation Report has been prepared in accordance with the Florida Department of Transportation's (FDOT) Project Development and Environment (PD&E) Manual, Part 2, Chapter 22, dated February 8, 1994.

A physical reconnaissance was conducted of the project corridor and adjacent properties to determine potential contamination problems within the corridor from properties or operations located within the vicinity of the corridor. This reconnaissance included a systematic inspection by looking for signs of possible soil contamination, stressed or dead vegetation, refuse that may indicate the presence of pollutants and/or toxic or hazardous materials, and the presence of underground/aboveground pollutant storage tanks.

A regulatory review (records search) of reasonably available federal and state environmental records was conducted on August 27, 2001. The reviewed records include information compiled by the United States Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection (FDEP). EDR-Radius Data Corporation, Inc. (EDR), was subcontracted to conduct a database search of potential hazardous and petroleum sites within the study area. This search was conducted as a preliminary screening tool to identify facilities that are registered with the various agencies and, along with the site reconnaissance, formed the basis for selecting the agency records for review. A copy of the database report is included in **Appendix A**. The following EPA and FDEP database listings were reviewed (but not limited to):

EPA Information

National Priorities List (NPL)

Comprehensive Environmental Response, Compensation, and Liability Information System List (CERCLIS)

Emergency Response Notification System List (ERNS)

RCRA Administrative Action Tracking System List (RAATS)

Resource Conservation and Recovery Information System (RCRIS)

Corrective Action Report (CORRACTS)

Toxic Release Inventory System List (TRIS)

Facility Index System List (FINDS)

Toxic Substances Control Act (TSCA)

Hazardous Materials Information Reporting System (HMIRS)

FDEP Information

Sites List (SITES)

Solid Waste Facilities List (SWF)

Leaking Underground Storage Tanks (LUST)

Stationary Tank Inventory (STI)

Drycleaner Solvent Cleanup Program (DSCP)

Cattle Dipping Vats

A site-specific summary of the regulatory review is provided in **Section 7**.

Available historical aerial photographs from 1965, 1979 and 1984 were reviewed at the Hernando County Planning Department Office, 20 N. Main Street, Rm. 262 in Brooksville, Florida. Current aerial photographs from 1988, 1995 and 2001 were reviewed at the Hernando County Property Appraisers Office, 201 Howell Avenue, Suite 300, Brooksville, Florida.

Review of the aerial photographs included searching for visual evidence of unusual land use that may indicate a potential adverse environmental impact in the project area. The offsite properties immediately adjacent to the subject corridor were also reviewed. A summary of the pertinent

information obtained during this review of the aerial photographs for each site is included in **Section 7**.

No Sanborn fire insurance maps were available for the study area and immediate vicinity at the University of South Florida Library. Local officials interviewed include the Hernando County Property Appraisers Office, Planning Department and Building Department personnel. These interviews did not indicate any current building permits issued recently for retail petroleum stations along the project corridor.

Each identified potential contamination site has been classified with a rating of either **No**, **Low**, **Medium** or **High** for its potential to impact the project corridor. These ratings are described as follows:

No: After a review of all available information, there is nothing to indicate contamination would impact the project corridor. It is possible that contamination could have been handled on the property; however, all information indicates impacts should not be expected.

Low: The former or current operation has a hazardous waste generator identification number, or deals with hazardous materials (or petroleum products); however, based on all available information, there is no reason to believe there would be any involvement with contamination.

Medium: After a review of all available information, indications are found that identify known soil and/or water contamination and that the problem does not need remediation, is being remediated (i.e., groundwater treatment, etc.), or that continued monitoring is required.

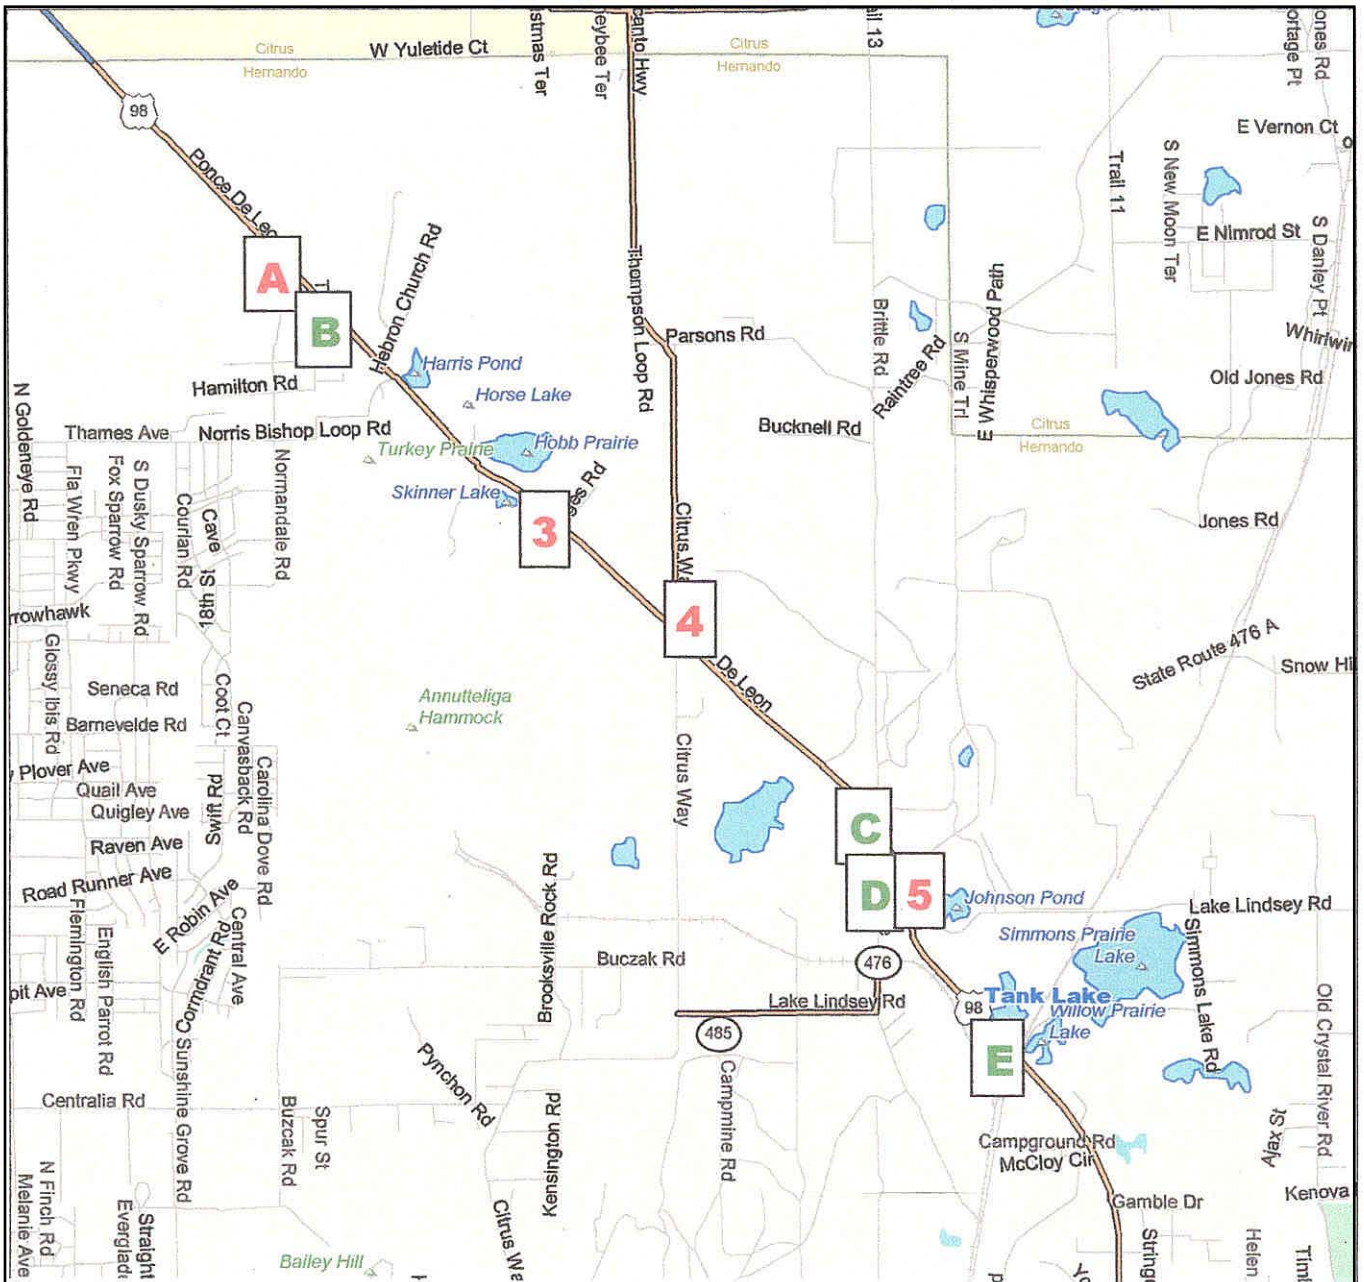

High: After a review of all available information, there is a potential for contamination impacts. Further assessment will be required to determine the actual presence and/or levels of contamination and the need for remedial action.

7.0 PROJECT IMPACTS

Future construction activities within the existing right-of-way create the potential for contamination impacts to the project corridor. Therefore, a contamination survey of the corridor was conducted using the methodology described in the previous section. The survey revealed a total of 19 facilities that have been identified as potential pollution sources within the limits of the project corridor. These sites have a history of, or currently, store, use or sell petroleum products or hazardous materials and are represented by a site number on **Exhibits 7.1 and 7.2**. Of these 19 facilities, only 9 facilities were determined to have potential or documented discharges, and/or received violations by a regulatory agency. Of the 9 facilities, 5 were rated **Low** and 4 were rated **Medium**, and are identified on **Table 7.1** and described below. The remaining ten facilities were determined to pose no threat of environmental impacts to the project corridor based on the absence of documented discharges, no violations reported, the documented discharge has been cleaned up and/or are located >500 feet from the project corridor. These facilities have been assigned a rating of **No** in accordance with the rating definitions. A description of each site is provided below.

Photographs of suspect sites are presented in **Appendix B**.

Site No. 3 - Florida Mining & Materials This facility is now called CEMEX and is located at 16301 Ponce De Leon Boulevard. The actual facility (plant) is located approximately 1 mile west of Ponce De Leon Boulevard and is visible from the project corridor. There are two violation records reported at this site dating from 1992 that appear to be related to Compliance Evaluation Inspections. The specific violations that have been cited were not listed or detailed as to their nature. Excavation activity was observed in each of the aerial photographs reviewed. Based on the age of these violations and the distance of this facility from the project corridor, it is likely that no impacts from this facility will affect the project corridor. Based on this information, the site was assigned a **Low** rating.

- Sites in green are "NO" risk
- Sites in red are "LOW" or "MEDIUM" risk
- Numbered sites were included in the EDR Report
- Lettered sites were not included in the EDR Report

**EXHIBIT 7.1 - US 98 SECTION
LISTED SITE LOCATIONS**
US 98/Cobb Road PD&E - Contamination Screening
Hernando County, Florida

- Sites in green are “NO” risk
- Sites in red are “LOW” or “MEDIUM” risk
- Numbered sites were included in the EDR Report
- Lettered sites were not included in the EDR Report

**EXHIBIT 7.2 - COBB ROAD SECTION
LISTED SITE LOCATIONS**
US 98/Cobb Road PD&E - Contamination Screening
Hernando County, Florida

Site No. 13 - Florida Crushed Stone-CPL Plant This facility is located over 1/3 mile west of Cobb Road. This facility has a documented petroleum discharge and is in a state funded petroleum cleanup program. According to the EDR database, the facility is in the assessment phase. Excavation activity was observed in each of the aerial photographs, although the UST area could not be seen on the recent aerials. Due to the distance of the plant location from the project corridor, and the regional direction of groundwater flow to the northwest, it is not likely that any petroleum contaminants will impact the corridor, therefore, the site has been given a **Low** rating.

Site No. 16 - Hess #09405 This facility is located at the northwest corner of Cortez Boulevard and Cobb Road. At least 5 monitoring wells were identified on-site in the vicinity of the UST area. No remedial cleanup system was identified on-site. The facility is in a state funded petroleum cleanup program. The facility has been assigned a priority score of 40 and is currently eligible for continuing assessment/cleanup activities. Based on a regulatory file review conducted at the FDEP-Tallahassee office, minimal petroleum impacts are present on-site. Groundwater analytical results reviewed for the latest sampling event in May, 2001 indicated the presence of benzene at a maximum concentration of 1.7 parts per billion (ppb) in a monitor well located on the east side of the existing UST area. The state regulatory standard for benzene is 1.0 ppb. The maximum total BTEX concentration (from the same well location) was 7.9 ppb. The state standard for BTEX is 50.0 ppb. Copies of the file information inclusive of the latest water table contour maps and groundwater analytical results are included in **Appendix C**. The UST area is located on the western boundary of the property and the fuel dispensers are located in the center of the property, the closest of which is approximately 80 feet from the western ROW of Cobb Road, south of the project limits. The facility is presently in the remedial phase (monitoring only). The groundwater flow direction was determined to be to the west-southwest away from the project corridor. According to the aerials reviewed, the site was vacant until sometime between the 1988 and 1995 photographs, when the facility structure was observed. Although this site has documented groundwater impacts, based on the distance of this facility from the project beginning, the low petroleum concentrations detected on-site, and the groundwater flow direction away from the project corridor, this facility has been assigned a **Medium** rating.

Site No. 15 - Shop & Save This facility is located at the northeast corner of Cobb Road and Ft. Dade Avenue. No monitoring wells were identified on-site in the vicinity of the UST area. The facility is in a state funded petroleum cleanup program, however, according to the EDR database report, no contamination was detected and no cleanup is required. The site currently has three UST's that are located approximately 50 feet from the eastern ROW of Cobb Road. Based on the presence of the UST's and no contamination, this facility has been assigned a **Medium** rating.

Site No. K - Flagstone Pavers This facility is located at 9070 Old Cobb Road, approximately 250 feet north of the intersection of Ft. Dade Avenue and Cobb Road. This facility manufactures and distributes concrete pavers for driveways, patios, etc. Several pallets of stacked pavers are present throughout the majority of the site. No UST's are listed for this facility nor were any identified during a site visit. This facility has been assigned a rating of **No**.

Site No. J - Frank's Well Drilling This is a water well contractor business that operates from a residence and is located 220 feet south of the intersection of Cobb Road and the Brooksville WRF driveway. One small drilling rig was observed on-site along with water holding tanks and pumps used for water well installations. Based on the absence of any environmental concerns, this facility has been assigned a **No** rating.

Site No. I - Industrial Welding & Maintenance This facility is located approximately 2000 feet south of the intersection of Cobb Road and Yontz Road. This facility appears to have good housekeeping practices and is well kept. No scrap metal debris or other potential environmental concerns were observed on-site. Based on the absence of environmental concerns, this facility has been assigned a **No** rating.

Site No. H - Ewell Industries This concrete facility is located approximately 600 feet south of the intersection of Cobb Road and Yontz Road. This facility manufactures concrete for the construction industry. Several cement trucks were parked on-site, and several stacks of concrete blocks and piles of sand aggregates were identified on-site. No environmental concerns were observed. This facility has been assigned a **No** rating.

Site No. G - Florida Crushed Stone Mobile Maintenance This facility is located at the southeast corner of Cobb Road and Yontz Road. No UST's or AST's were observed on-site nor have any been documented with the regulatory agencies. Several rock haulers and dump trucks were observed parked on-site. No environmental concerns were observed. This facility has been assigned a rating of **No**.

Site No. F - A potential fill dirt facility This is located approximately 800 feet east of the intersection of Cobb Road on Yontz Road. The facility appears to be a single family residence with a semi-circular drive that accesses Yontz Road. Behind the residence is a large open shelter building that is accessed by a gated driveway on the west side of the residence. Several small piles of fill dirt were observed in the backyard on the west side of the property. There was no answer at the residence and no one in the yard at the time of the site visit. No business name was visible in either the yard or on the residence. No environmental concerns were observed to be associated with the facility, which has been assigned a rating of **No**.

Site No. E - State Wide Trucks and Equipment This facility is located on the west side of U.S. 98 opposite Tank Lake. The yard is currently vacant except for a trailer office. The owner of the facility (Al Hatcher) was present and stated that the business was called State Wide Trucks & Equipment, Inc. Mr. Hatcher stated that they do semi-truck sales and repair. There are no tanks on the facility and they have owned it for 3 years. Prior to their ownership the property was vacant. Based on the absence of any observed environmental concerns, this facility was assigned a rating of **No**.

Site No. 5 - Ringhaver This facility is located on the east side of U.S. 98 approximately 400 feet north of the intersection with C.R. 476. This facility provides both service and rental of heavy equipment (excavators, loaders, etc.). According to the EDR database report, a total of two tanks (AST's) are documented for this facility as being in-service. One 10,000 gallon diesel AST is located at the rear of the facility in a concrete containment area adjacent to a dispenser at one end and a fire extinguisher at the other. The second AST is a 10,000 gallon new/lube oil tank located in a concrete containment area on the north side of the facility adjacent to the building. Both the AST's and the concrete containment areas look new and are in perfect condition. One apparently

unregistered 550-gallon waste oil AST is located inside the service building on a skid mount adjacent to a smaller unregulated AST containing antifreeze. The waste oil and antifreeze AST's are approximately one year old, when the service building was constructed. No spills or obvious staining was observed. The facility appears to have good housekeeping practices and well maintained shop areas. Based on the presence of the AST's, this facility has been assigned a rating of **Medium**.

Site No. D - Goodwin Brothers This construction yard is located on the west side of U.S. 98 approximately 1000 feet north of the intersection with C.R. 476. A few pieces of heavy equipment were located in the yard (excavator, front end loader), along with a few small piles of fill dirt and mulch. One building is located on-site that is utilized as an office. No environmental concerns were observed. This facility has been assigned a rating of **No**.

Site No. C - BT Transport This construction yard is located on the west side of U.S. 98 at the intersection with Brooksville Quarry road and C.R. 491A. One small excavator was located on-site. One building is located on-site that is utilized as an office. No environmental concerns were observed. This facility has been assigned a rating of **No**.

Site No. 4 - Deschamps Grocery & Gas Station is located at 15738 Ponce De Leon at the northeast corner of U.S. 98 and Citrus Way. This facility has registered UST's and AST's and has no documented petroleum contamination. The facility sells gasoline, diesel and kerosene fuel products as well as propane gas. The facility operates as a grocery/general store and also sells feed supplies. The UST's are located within 30 feet of the existing ROW of U.S. 98. Based on the presence of the UST's, this facility has been assigned a rating of **Medium**.

Site No. B - Master Blaster sandblasting facility is located on the west side of U.S. 98 approximately 400 feet north of the intersection with Hebron Church Road. This is a residence that appears to manufacture and sell mainly wood carvings, but also does sandblasting by appointment. Several saws and wood cutting tools were observed, as well as wood carving displays. No environmental concerns were observed, therefore, this facility was assigned a rating of **No**.

Site No. A - Florida Industrial Electric This facility is located on the west side of U.S. 98 approximately 600 feet north of the entrance to World Woods Country Club. The facility appears to have been abandoned for several years and has no name posted to identify it. There is one roll-off dumpster located in front of the building that was filled with debris and household trash (pvc pipe, wires, empty pails, paper and plastic debris). The building is rectangular with a woodframe open shelter on one end and an enclosed room on the north end with a metal roof. The building has a concrete slab. Approximately five to six 5 gallon buckets of lubricants and possible waste oil were observed on the concrete slab in the northwest corner of the building. Some of the buckets appeared only half full and did not have lids. One rusted metal water tank is located north of the building, which is elevated to facilitate gravity feed. No other environmental concerns were observed. Based on the distance of this site from the existing ROW of U.S. 98 (approximately 500 feet), and the presence of the lubricants and waste oil materials, this facility has been assigned a rating of **Low**.

Site No. 9 - Asphalt Pavers This facility has a documented petroleum discharge of waste oil and is in a state funded petroleum cleanup program. According to the database report, no assessments or cleanup activities have been reported for this facility. This facility was verified to be located approximately 1 mile west of the corridor on Cement Plant Road according to a representative from a nearby facility (Grubbs Construction). The regulatory file review for this facility at the Florida Department of Environmental Protection (FDEP) office in Tallahassee, Florida revealed nothing in the file. The file folder was empty. However, due to relative immobility of waste oil contamination, it is likely that any waste oil impacts associated with the facility would not impact the project corridor. No record of the discharge was confirmed, and the site could not be located along the project corridor. Based on this information, the site was assigned a **Low** rating.

Site No. L – Grubbs Construction This asphalt plant was observed from the roadway corridor, located at 10340 Camp Mine Road, approximately 280 feet west from the ROW. This facility was not described in the EDR database report. A telephone conversation with Mr. Joey Martelle, plant manager for Grubbs Construction, revealed that the facility has been in operation for approximately 2 years. There are no hazardous chemicals or waste products stored on site. However, there are several containers of liquid asphalt and several drums of diesel fuel used to operate the hot oil heater. In addition, there is a “No. 5 oil burner that is double walled” and a “20,000 (gallon) portable

asphalt (machine)". There have been no documented spills or problems at the facility. Mr. Martelle indicated that if there was a spill of liquid asphalt, the material solidifies immediately. According to Mr. Martelle, the site is inspected regularly and has a registered ID number for air pollution. Based on this information, the site was assigned a **Low** rating.

Sites denoted by letters were not located by original EDR search.

8.0 RECOMMENDATIONS

A total of 19 facilities were identified and evaluated through Federal and State databases, FDEP regulatory file information, Hernando County public records, aerial photography and site investigation. The sites were rated either **No**, **Low**, **Medium** or **High** for their potential to contain petroleum or hazardous materials contamination. None of the sites were rated **High** based on the information reviewed. A total of 5 sites had potential or documented discharges, and/or violations that were assigned a **Low** rating, and 4 sites were assigned **Medium** ratings. None of these sites are likely to cause any contamination impacts to the project corridor. Based on the information identified and discussed in this report, no additional assessments or recommendations are warranted at this time.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-TSD list, as provided by EDR, and dated 06/21/2000 has revealed that there is 1 RCRIS-TSD site within the searched area.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC).

Date of Government Version: 04/17/01

Date Made Active at EDR: 08/06/01

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/09/01

Elapsed ASTM days: 89

Date of Last EDR Contact: 08/06/01

Proposed NPL: Proposed National Priority List Sites

Source: EPA

Telephone: N/A

Date of Government Version: 04/17/01

Date Made Active at EDR: 08/06/01

Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 05/09/01

Elapsed ASTM days: 89

Date of Last EDR Contact: 08/06/01

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/16/01

Date Made Active at EDR: 04/30/01

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/26/01

Elapsed ASTM days: 35

Date of Last EDR Contact: 06/25/01

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 03/16/01

Date Made Active at EDR: 04/30/01

Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/26/01

Elapsed ASTM days: 35

Date of Last EDR Contact: 06/25/01

CORRACTS: Corrective Action Report

Source: EPA

Telephone: 800-424-9346

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 03/27/01
Date Made Active at EDR: 05/16/01
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 04/11/01
Elapsed ASTM days: 35
Date of Last EDR Contact: 06/12/01

RCRIS: Resource Conservation and Recovery Information System

Source: EPA/NTIS
Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 06/21/00
Date Made Active at EDR: 07/31/00
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 07/10/00
Elapsed ASTM days: 21
Date of Last EDR Contact: 07/02/01

ERNS: Emergency Response Notification System

Source: EPA/NTIS
Telephone: 202-260-2342

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 08/08/00
Date Made Active at EDR: 09/06/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 08/11/00
Elapsed ASTM days: 26
Date of Last EDR Contact: 08/10/01

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System

Source: EPA/NTIS
Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/97
Database Release Frequency: Biennially

Date of Last EDR Contact: 06/18/01
Date of Next Scheduled EDR Contact: 09/17/01

CONSENT: Superfund (CERCLA) Consent Decrees

Source: EPA Regional Offices
Telephone: Varies

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision

Source: NTIS
Telephone: 703-416-0223

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 09/30/99
Database Release Frequency: Annually

Date of Last EDR Contact: 07/10/01
Date of Next Scheduled EDR Contact: 10/08/01

DELISTED NPL: National Priority List Deletions

Source: EPA
Telephone: N/A

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 04/17/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 08/06/01
Date of Next Scheduled EDR Contact: 11/05/01

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report

Source: EPA
Telephone: N/A

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/07/00
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/09/01
Date of Next Scheduled EDR Contact: 10/08/01

HMIRS: Hazardous Materials Information Reporting System

Source: U.S. Department of Transportation
Telephone: 202-366-4526

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/31/00
Database Release Frequency: Annually

Date of Last EDR Contact: 07/23/01
Date of Next Scheduled EDR Contact: 10/22/01

MLTS: Material Licensing Tracking System

Source: Nuclear Regulatory Commission
Telephone: 301-415-7169

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/30/01
Database Release Frequency: Quarterly

Date of Last EDR Contact: 07/09/01
Date of Next Scheduled EDR Contact: 10/08/01

MINES: Mines Master Index File

Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 08/01/98
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/02/01
Date of Next Scheduled EDR Contact: 10/01/01

NPL LIENS: Federal Superfund Liens

Source: EPA
Telephone: 205-564-4267

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 05/23/01
Date of Next Scheduled EDR Contact: 08/20/01

PADS: PCB Activity Database System

Source: EPA
Telephone: 202-260-3936

PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/30/01
Database Release Frequency: Annually

Date of Last EDR Contact: 05/18/01
Date of Next Scheduled EDR Contact: 08/13/01

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

Source: EPA

Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95

Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/11/01

Date of Next Scheduled EDR Contact: 09/10/01

TRIS: Toxic Chemical Release Inventory System

Source: EPA

Telephone: 202-260-1531

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/98

Database Release Frequency: Annually

Date of Last EDR Contact: 06/27/01

Date of Next Scheduled EDR Contact: 09/24/01

TSCA: Toxic Substances Control Act

Source: EPA

Telephone: 202-260-1444

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98

Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 07/09/01

Date of Next Scheduled EDR Contact: 09/10/01

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

Source: EPA/Office of Prevention, Pesticides and Toxic Substances

Telephone: 202-564-2501

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 08/30/00

Database Release Frequency: Quarterly

Date of Last EDR Contact: 06/26/01

Date of Next Scheduled EDR Contact: 09/24/01

STATE OF FLORIDA ASTM STANDARD RECORDS

SHWS: Florida's State-Funded Action Sites

Source: Department of Environmental Protection

Telephone: 850-488-0190

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 05/16/01
Date Made Active at EDR: 06/29/01
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 06/04/01
Elapsed ASTM days: 25
Date of Last EDR Contact: 06/04/01

SWF/LF: Solid Waste Facility Database

Source: Department of Environmental Protection
Telephone: 850-922-7121

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 03/21/01
Date Made Active at EDR: 04/20/01
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 03/22/01
Elapsed ASTM days: 29
Date of Last EDR Contact: 06/12/01

LUST: PCT01 - Petroleum Contamination Detail Report

Source: Department of Environmental Protection
Telephone: 850-488-3935

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 05/11/01
Date Made Active at EDR: 06/29/01
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 05/30/01
Elapsed ASTM days: 30
Date of Last EDR Contact: 05/14/01

UST: ST102 - Facility/Owner/Tank Report

Source: Department of Environmental Protection
Telephone: 850-488-3935

Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program.

Date of Government Version: 08/08/00
Date Made Active at EDR: 10/03/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 09/05/00
Elapsed ASTM days: 28
Date of Last EDR Contact: 07/27/01

STATE OF FLORIDA ASTM SUPPLEMENTAL RECORDS

AST: ST102 - Facility/Owner/Tank Report

Date of Next Scheduled EDR Contact: 10/01/01

Industrial Waste Permit Sites

Source: Department of Environmental Resources Management
Telephone: 305-372-6755

Facilities that either generate more than 25,000 of wastewater per day to sanitary sewers or are pre-defined by EPA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 07/05/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/05/01
Date of Next Scheduled EDR Contact: 10/01/01

Industrial Waste Type 2-4 Sites

Source: Department of Environmental Resources Management
Telephone: 305-372-6755

IW2s are facilities having reclaim or recycling systems with no discharges, aboveground holding tanks or spill prevention and countermeasure plans. IW4s are facilities that discharge an effluent to the ground.

Date of Government Version: 05/11/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/05/01
Date of Next Scheduled EDR Contact: 10/01/01

Industrial Waste Type 5 Sites

Source: Department of Environmental Resources Management
Telephone: 305-372-6755

Generally these facilities fall under the category of "conditionally exempt small quantity generator" or "small quantity generator".

Date of Government Version: 05/11/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/05/01
Date of Next Scheduled EDR Contact: 10/01/01

Industrial Waste Type 6

Source: Department of Environmental Resources Management
Telephone: 305-372-6755

Permits issued to those non-residential land uses located within the major drinking water wellfield protection areas that are not served by sanitary sewers. These facilities do not handle hazardous materials but are regulated because of the env. sensitivity of the areas where they are located.

Date of Government Version: 05/11/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 07/05/01
Date of Next Scheduled EDR Contact: 10/01/01

EDR PROPRIETARY DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

HISTORICAL AND OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

Thank you for your business.
