HDR Inc.

Tampa, Florida

MARCH 2020

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the Florida Department of Transportation (FDOT) pursuant to Title 23, Section 327 of the United States Code (23 U.S.C. § 327) and a Memorandum of Understanding dated December 14, 2016, and executed by FHWA and FDOT.

Executive Summary

The Florida Department of Transportation (FDOT) is conducting a Design Change Re-evaluation to assess and document proposed changes to the previously approved Project Development and Environment (PD&E) Study for Interstate 275 (I-275)/State Road 93 (SR 93) from south of 54th Avenue South to north of 4th Street North in Pinellas County, Florida. The Federal Highway Administration (FHWA) approved the Type II Categorical Exclusion (Type II CE) on July 15, 2016. Following FHWA's approval, a Re-evaluation was prepared to evaluate a change to the approved Typical Section for Segment C of the project (i.e., from south of Gandy Boulevard to north of 4th Street North). That Re-evaluation evaluated the repurposing of one of the two approved express lanes to accommodate the provision of three general use through lanes, one auxiliary lane, and one express lane in each direction. The results of the highway traffic noise study for that Re-evaluation (approved by the FDOT's Office of Environmental Management (OEM) on April 26, 2017) are documented in a Noise Study Report (NSR) Addendum (NSRA) published in July of 2016. The highway traffic noise analysis that was performed for the PD&E Study and for the Re-evaluation resulted in commitments by the FDOT to construct numerous noise barriers contingent on several factors (e.g., surveys to determine if the owners of property that would be benefited by a noise barrier desire the barriers to be constructed).

The current Design Change Re-evaluation is assessing four express lanes (two in each direction) in a portion of Segment B from north of I-375 to south of Gandy Boulevard and to accommodate improvements for a second express lane in Segment C. Within Segment B and C, 24 Noise Study Areas (NSAs) were previously evaluated. A land use review conducted on April 8, 2019 did not identify any new noise sensitive land uses. For the current Re-evaluation only the NSAs with single-family residential land uses were evaluated (NSAs 49, 54, 55, 57, 59, 61, 63, 66, 67, and 69). Non-residential NSAs (i.e., special land uses) were not re-analyzed because the results of the PD&E analysis/Re-evaluation indicated that it was unreasonable to assume that the required number of persons would use the properties on a daily basis and the proposed changes to the design of I-275 would not reduce, but would likely increase, the required amount of use.

At the beginning of Segment C (Gandy Boulevard), three noise barriers are currently being constructed—barriers for NSAs 69 (Village Green Mobile Home Park), NSA 70 (Bay Isle Key Apartments), and NSA 71 (Azure Apartments and The Villas of Carillon). Because the current design change has the potential to reduce the benefit of the barrier for the residences in NSA 69, this NSA was re-evaluated to determine if the barrier should be lengthened (it is being constructed at the maximum allowable height of 22 feet).

Based on the results of the analysis for this Re-evaluation, noise barriers were determined to be a potentially feasible and reasonable measure to reduce predicted traffic noise impacts for the nine residential NSAs that were evaluated and the existing barrier at NSA 69 does not require lengthening. The locations of the barriers are also illustrated on the Concept Plans for the improvements that are provided in Appendix B of this NSRA II.

Statement of Likelihood

The FDOT is committed to the construction of the noise barriers that have been determined to be a potentially feasible and reasonable noise abatement measure contingent on the following:

- Detailed noise analyses during the final design process supports the need, feasibility, and reasonableness of providing the abatement;
- analysis indicates that the cost of the noise barrier(s) will not exceed the cost reasonable criterion;
- community input supporting the type, height, and location of the noise barrier(s) is obtained; and
- safety and engineering aspects as they relate to the roadway user and the adjacent property owners have been reviewed and any conflicts and/or issues have been resolved.

1.0 Project Summary

1.1 Project Description

The Florida Department of Transportation (FDOT), District Seven is conducting a Design Change Re-evaluation to evaluate and document proposed changes to the originally approved Type II Categorical Exclusion (CE) and subsequent Re-evaluation for I-275 (SR 93) from south of 54th Avenue South to north of 4th Street North in Pinellas County, Florida. A Project Development and Environment (PD&E) study was conducted for the 16.3-mile corridor to analyze the need for operational improvements and evaluate the location, conceptual design, and social, economic, and environmental effects of any proposed improvements. Following a Public Hearing held on September 29, 2015, FHWA approved the Type II CE for this project on July 15, 2016.

Following approval of the Type II CE, FDOT performed a Design Change Re-evaluation in 2017 to evaluate a change to the approved Typical Section of Segment C (from Dr. MLK, Jr. Boulevard to north of 4th Street North). The 2017 Re-evaluation assessed the repurposing of one of the two approved express lanes to accommodate the provision of three general use through lanes, one auxiliary lane, and one express lane in each direction for this segment of the study corridor. The 2017 Design Change Re-evaluation was approved by FDOT on April 26, 2017.

FDOT is currently conducting another Design Change Re-evaluation to assess impacts of accommodating improvements for a second express lane in Segment C and the addition of two express lanes in Segment B from north of I-375 to south of Gandy Boulevard. These proposed improvements would tie-in with planned improvements to the Howard Frankland Bridge (FPID 422904-2 and 422904-4). This re-evaluation also analyzes replacing the I-275 ramp bridges on 4th Street North over Big Island Gap.

The current re-evaluation also analyzes replacing the I-275 ramp bridges on 4th Street North over Big Island Gap, providing trail connections from the Howard Frankland Bridge to 4th Street North and Ulmerton Road, and ramp connection modifications at the Gandy Boulevard and Gateway Expressway interchange areas. To meet drainage and stormwater requirements, pond sites will be needed to accommodate new impervious surface due to widening to accommodate express lanes. Several of these new pond site locations will be outside of the existing right of way.

1.2 Purpose and Need

The purpose of this project is to provide for operational improvements that maximize capacity within the I-275 corridor, improve lane continuity, and connect I-275 within Pinellas County to the future network of express lanes planned for the Tampa Bay Region. Improvements are needed within the I-275 corridor to help improve existing traffic congestion, enhance safety, and better accommodate future travel demands associated with projected growth in employment and population. The addition of express lanes is included in the Pinellas County Metropolitan Planning Organization (MPO) 2040 Long Range Transportation Plan (LRTP).

I-275 is a vital link in the local and regional transportation network and serves as a critical evacuation route. As a major north-south corridor through Pinellas County, I-275 links the Tampa Bay Region with

the remainder of the state and the nation supporting commerce, trade, and tourism. Preserving the operational integrity and regional functionality of I-275 is critical to the mobility and economy of the Tampa Bay Region.

1.3 Description of the Design Change

The current Design Change Re-evaluation includes a typical section change to extend two buffer-separated express lanes in both directions from I-375 to north of 4th Street North, as well as a 12-ft wide outside shoulder to accommodate bus-on-shoulder operations from I-375 to Gandy Boulevard. This concept supersedes the 2017 Design Change Re-evaluation concept. The current Design Change Re-evaluation also includes trail connections from the Howard Frankland Bridge to 4th Street North and Ulmerton Road. To accommodate the new trail connection, the 4th Street North bridge over Big Island Gap will undergo either widening or reconstruction.

The Gateway Expressway interchange area will also be modified under this re-evaluation. Ramps located to the south of the Gateway area will carry drivers from northbound I-275 Express Lanes to Gateway Expressway, as well as carry drivers from the Gateway Expressway to southbound I-275 Express Lanes. In addition, access to southbound I-275 from the Gandy Boulevard interchange will be modified by connecting the westbound-to-southbound loop on ramp and the eastbound-to-southbound on ramp into a frontage road system that provides one entry point onto southbound I-275. Finally, additional drainage and stormwater requirements, such as pond sites, will be needed to accommodate the new impervious surface due to the express lane widening. Several of these new pond site locations will be outside of the existing right of way.

1.4 Purpose of Report

The re-evaluation of any Environmental Document that included an NSR shall also include an update of the traffic noise analysis. Within Segment B and C, 24 Noise Study Areas (NSAs) were previously evaluated. A land use review conducted on April 8, 2019 did not identify any new noise sensitive land uses. For the current Re-evaluation only the NSAs with single-family residential land uses were evaluated (NSAs 49, 54, 55, 57, 59, 61, 63, 66, and 67). Non-residential NSAs (i.e., special land uses) were not re-analyzed because the results of the original PD&E Study and 2017 Re-evaluation indicated that it was unreasonable to assume that the required number of persons would use the properties on a daily basis and the proposed changes to the design of I-275 would not reduce the required amount of use.

At the southern limit of Segment C (Gandy Boulevard), three noise barriers are currently being constructed—barriers for NSA 69 (Village Green Mobile Home Park), NSA 70 (Bay Isle Key Apartments), and NSA 71 (Azure Apartments and The Villas of Carillon). The current design change has the potential to reduce the benefit of the barrier for the residences in NSA 69, therefore this NSA was re-evaluated to determine if the barrier should be lengthened (it is being constructed at the maximum allowable height of 22 feet).

For the reasons stated above, the primary objectives of the current Re-evaluation are to:

1. Determine whether noise barriers are a potential feasible and reasonable noise abatement measure for the residences in NSAs 49, 54, 55, 57, 59, 61, 63, 66, and 67.
2. Determine whether the existing noise barrier for NSA 69 should be lengthened.

A secondary objective includes providing an update to the noise impact “contours” for this segment of I-275. These noise contours delineate the distance from the improved roadway’s edge-of-pavement where exterior traffic noise is predicted to meet the FDOT’s Noise Abatement Criteria (NAC).

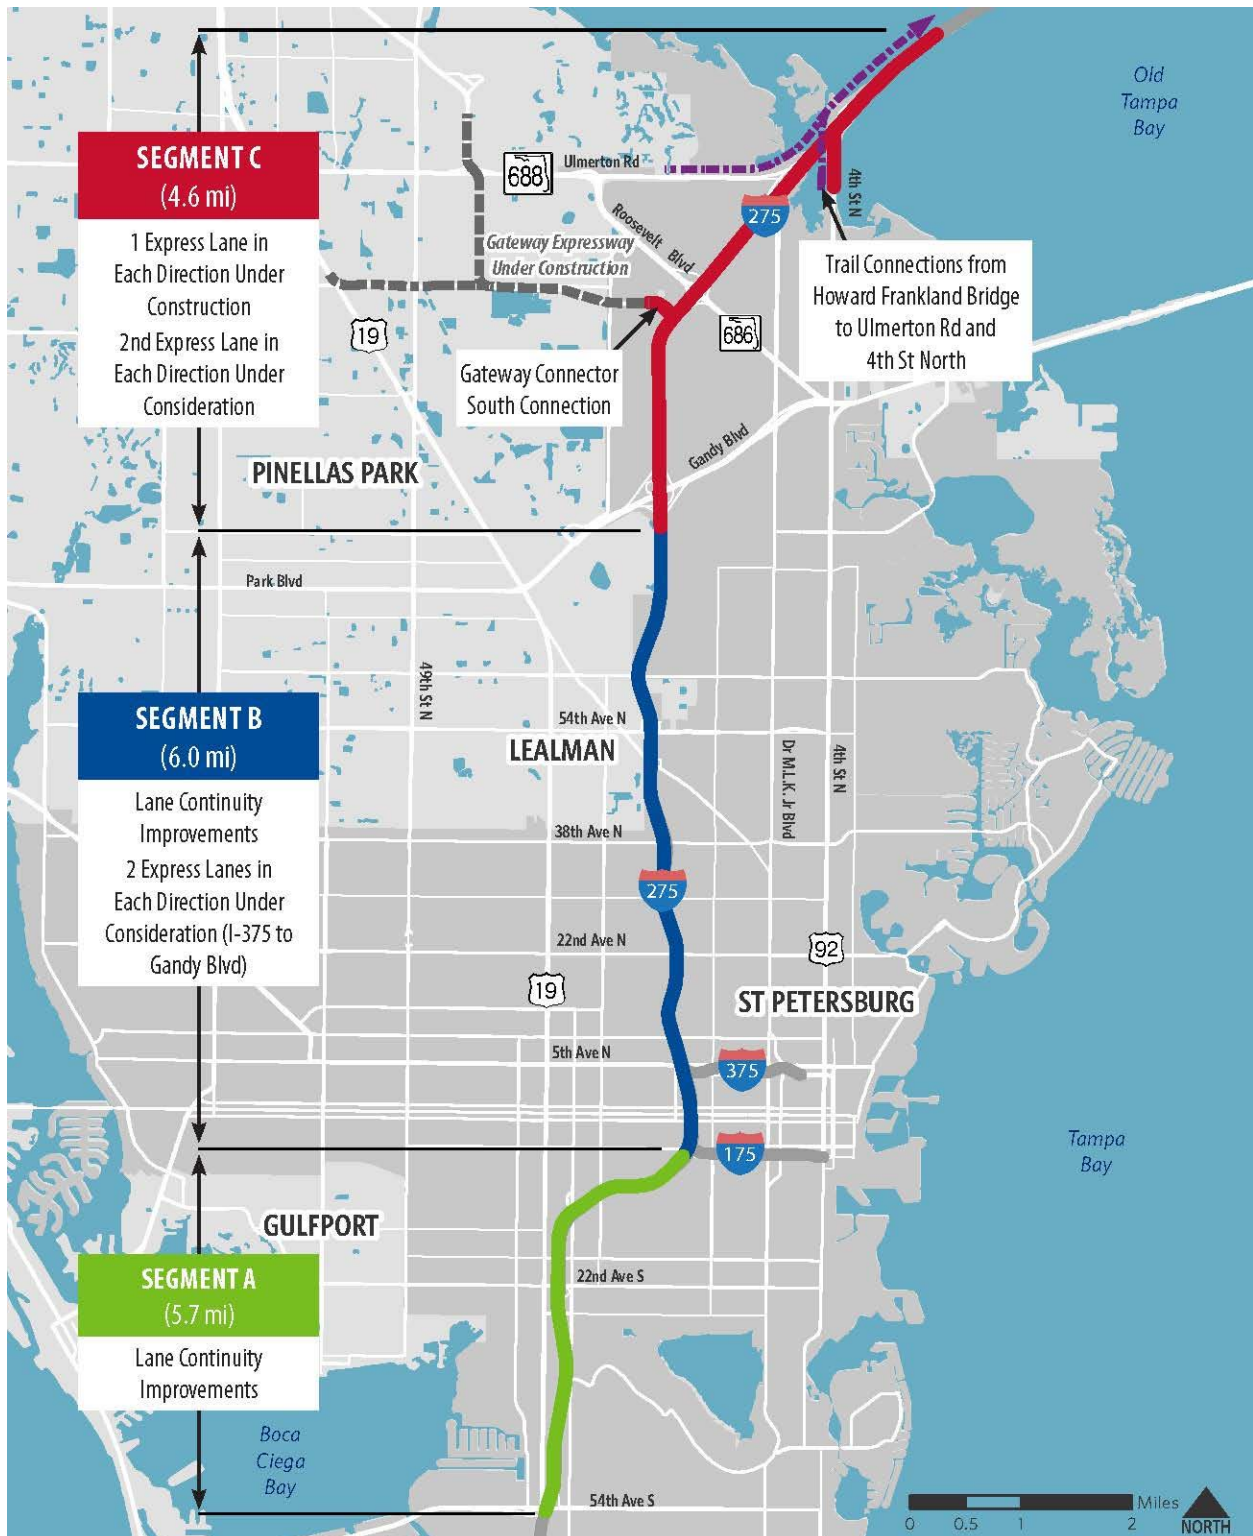

Figure 1-1. Project Location Map

2.0 Methodology

The highway traffic noise and noise barrier analysis was prepared in accordance with all applicable requirements of Part 772 of Title 23 of the Code of Federal Regulations (23 CFR 772), *Procedures for Abatement of Highway Traffic Noise and Construction Noise*; and the policies/procedures documented in the FDOT's PD&E Manual, Part 2, Chapter 18 (*Highway Traffic Noise*, January 14, 2019). Where appropriate, guidance in the FDOT's *Traffic Noise Modeling and Analysis Practitioners Handbook* was also used to perform and/or document the analysis. As required, the analysis was performed using the Federal Highway Administration's (FHWA's) Traffic Noise Model (TNM, Version 2.5). Field measurements to validate that the TNM accurately predicts traffic noise levels are documented in the April 2016 PD&E NSR.

2.1 Noise Metrics

The predicted traffic noise levels presented in this report are expressed in decibels on the "A"-weighted scale (dB(A)). This scale most closely approximates the response characteristics of the human ear to traffic noise. All traffic noise levels are reported as equivalent levels (Leq(h)). Levels reported as Leq(h) are equivalent steady-state sound levels that contain the same acoustic energy as time-varying sound levels over a period of one hour.

2.2 Traffic Data

The traffic volumes used in this traffic noise re-evaluation for the general use lanes, the proposed I-275 express lanes and the I-275 entrance and exit ramps were the design level-of-service (LOS) C volumes. These volumes and other project-related traffic data are provided in **Appendix A** of this NSRA.

2.3 Noise Abatement Criteria

For the purpose of evaluating traffic noise, the FHWA established NAC. As shown in **Table 2-1**, these criteria vary according to a property's activity category (i.e., land use). For comparative purposes, typical noise levels for common indoor and outdoor activities are provided in **Table 2-2**.

When predicted traffic noise levels "approach" or exceed the NAC, or when predicted future noise levels increase substantially from existing levels, the FHWA requires that noise abatement measures be considered. FDOT defines the word "approach" to mean within 1 dB(A) of the NAC. The FDOT's NAC are also shown in Table 2-1.

FHWA regulations also state that a traffic noise impact is predicted to occur when predicted traffic noise levels with a proposed improvement are considered substantial when compared to existing levels. The FDOT considers that a substantial noise increase occurs when traffic noise levels are predicted to increase 15 dB(A) or more above existing conditions as a direct result of a transportation improvement project.

Table 2-1. FHWA/FDOT NAC

Activity Category	Description of Activity Category	Activity Leq(h) ¹	
		FHWA	FDOT
A	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.	57 (Exterior)	56 (Exterior)
B ²	Residential	67 (Exterior)	66 (Exterior)
C ²	Active sports areas, amphitheaters, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreational areas, Section 4(f) sites, schools, television studios, trails and trail crossings.	67 (Exterior)	66 (Exterior)
D	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools and television studios.	52 (Interior)	51 (Interior)
E ²	Hotels, motels, offices, restaurants/bars and other developed lands, properties or activities not included in A-D or F.	72 (Exterior)	71 (Exterior)
F	Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, manufacturing, mining, rail yards, retail facilities, shipyards, utilities (water resources, water treatment, electrical) and warehousing.	--	--
G	Undeveloped lands that are not permitted.	--	--

Sources: Table 1 of 23 CFR Part 772 and Figure 18.1 of Chapter 18 of the FDOT's PD&E Manual (dated 1-14-19).

¹ The Leq(h) activity criteria values are for impact determination only, and are not design standards for noise abatement measures.

² Includes undeveloped lands permitted for this activity category.

Note: FDOT defines that a substantial noise increase occurs when existing noise level is predicted to be exceeded by 15 decibels or more as a result of the transportation improvement project. When this occurs, the requirements for abatement consideration will be followed.

2.4 Noise Barriers

The most common type of noise abatement measure is the construction of a noise barrier. Noise barriers have the potential to reduce traffic noise levels by blocking the sound path between the motor vehicles on the roadway (the source) and the noise-sensitive land uses adjacent to the roadway (the receptor).

In order to effectively reduce traffic noise, a noise barrier must be relatively long, continuous (without intermittent openings) and sufficiently tall. For a noise barrier to be considered a potential abatement measure the barrier must also provide the following noise reduction requirements:

- Minimum Noise Reduction Requirements - A noise barrier must provide at least a 5 dB(A) reduction in traffic noise for two or more impacted noise-sensitive receptors and also provide at least a 7 dB(A) reduction (i.e., the FDOT's noise reduction design goal) for at least one receptor. Receptors are discrete representative locations on a property that has noise sensitive activities (see Table 2-1).

The cost of a noise barrier must also be reasonable. For this purpose, the FDOT established the following cost effective criteria:

- Cost Effective Criteria – At a cost of \$30 per square foot, a noise barrier should not cost more than \$42,000 per benefited noise sensitive receptor (a benefited receptor is a receptor that receives at least a 5 dB(A) reduction in noise from a mitigation measure).

If the results of the analysis indicate that a noise barrier would provide the required reduction in traffic noise at a cost at or below the cost effective criteria, additional factors are then considered. These factors relate to barrier design and construction (i.e., given site-specific details, can a barrier actually be constructed), safety, access to and from adjacent properties, ROW requirements, maintenance, and impacts on utilities and drainage. The viewpoint of benefited property owners who may, or may not, desire a noise barrier, is also a factor that is considered when evaluating noise barriers as an abatement measure.

For this Design Change Re-evaluation, noise barriers were evaluated along the ROW. In the design phase of this project, shoulder or structure mounted noise barriers may be considered where I-275 is elevated in the vicinity of cross streets and interchanges.

3.0 Traffic Noise Analysis

3.1 Noise Sensitive Receptors

The changes to the design of the improvements to I-275 that are evaluated in this NSRA begin in Segment B at 5th Avenue North and extend to the beginning of Segment C (south of Gandy Boulevard). There are 10 residential NSAs within these limits (NSAs 49, 54, 55, 57, 59, 61, 63, 66, 67, and 69). One thousand one hundred thirteen receptors (i.e., discrete representative locations on a property that has a noise sensitive land use) were evaluated representing 1,159 residences within the 10 NSAs. **Table 3-1** lists and describes each NSA and provides the number of the evaluated receptors/residences in each area. The location of the receptors are also illustrated on the I-275 concept plans provided in **Appendix B** of this NSRA.

Table 3-1 Noise Sensitive Areas

NSA No.	Sheet No. (See Appendix B)	Activity Category	Description of Activity Category	Number of Evaluated Receptors / Residences	Location of Residences
49	10-11	B	Residential	54 / 69	Sunshine Park Subdivision
54	11-14	B	Residential	247 / 249	Reisset, Brunson's, Woodlawn Estates, Pine City, Townsend's, R.I. Williamson's Herkimer Heights, Shelton Heights, and Clearview Park Subdivisions
55	12-13	B	Residential	60 / 64	Brunson's, Woodlawn Estates, and Pine City Subdivisions
57	13-15	B	Residential	313 / 314	Pine City, Herkimer Heights, Bengers' Rochester Heights, D.C. White, Coolidge Park, Lynndale, Mar-Mick, and Lakeside Subdivisions, Silver Lake Mobile Home Resort and North Ridge Mobile Home Park
59	14-16	B	Residential	143 / 143	Fleming's, Harris School Park, Tetreault, Cross Corners, Sunshine, Larry's, Bryan Heights, and Thrumstons Billmar Subdivisions
61	16	B	Residential	34 / 34	Heinz Subdivision and Mobile Home Park in Southwest Quadrant of I-275 and 54 th Avenue North Interchange
63	16-17	B	Residential	68 / 68	Erle Renwick Subdivision and Southern Mobile Home Resort
66	17-19	B	Residential	133 / 157	Chateaux Versailles and the Oaks at Meadowlawn, Meadowlawn Cardinal Subdivisions
67	17	B	Residential	26 / 26	Fairview Estates
69	19-20	B	Residential	35 / 35	Village Green Mobile Home Park
Total				1,113 / 1,159	

It should be noted that there are additional residential NSAs in Segment C that were not evaluated—NSA 70 (Bay Isle Key Townhomes) and NSA 71 (Azure Apartments and The Villas of Carillon). These NSAs have existing noise barriers. The detailed noise barrier analysis near these NSAs are

documented in the July 2016 NSRA. The primary design change from the July 2016 NSRA Addendum to this Design Change Re-evaluation is the realignment of Ramp P in the northwest quadrant of the I-275/SR 686 interchange. This change has the potential to affect the number of traffic noise impacts and the barrier analysis that is presented in the July 2016 NSRA for NSA 71. This change is not evaluated in this NSRA because the results of the evaluation for the change were documented in an August 2018 Technical Memorandum, *Ramp P Realignment at the I-275/SR 686 (Roosevelt Boulevard) Interchange* (FPID 433880). Notably, the results of the reanalysis concluded that the realignment of Ramp P would not create any new traffic noise impacts at the Azure Apartments (nor the Madison Gateway Apartments that is located further west than the Azure Apartment complex along Ramp P). The results of the reanalysis also concluded that the dimensions (length and height) of the proposed NSA 71 noise barrier were valid.

3.2 Predicted Traffic Noise Levels

The predicted existing (year 2012) and future (year 2040) traffic noise levels with and without the proposed design change are provided in **Appendix C** for each of the evaluated receptors. **Table 3-2** summarizes the analysis results and lists the number of receptors and residences that are predicted to be impacted by highway traffic noise with the proposed I-275 design change.

Table 3-2 Summary of the Traffic Noise Analysis Results

NSA No.	Number of Evaluated Receptors / Residences	With Design Change		Number of Impacted Residences
		Range of Predicted Traffic Noise Levels (dB(A))	Maximum Increase in Traffic Noise When Compared to Existing Levels (dB(A))	
49	54 / 69	63.3 - 68.7	1.4	30
54	247 / 249	64.9 - 77.0	5.7	233
55	60 / 64	63.4 - 71.9	1.2	45
57	313 / 314	63.6 - 75.8	3.7	281
59	143 / 143	63.5 - 78.9	5.1	137
61	34 / 34	65.3 - 72.3	6.2	31
63	68 / 68	62.6 - 72.8	10.2	41
66	133 / 157	65.3 - 76.4	8.0	151
67	26 / 26	65.0 - 67.7	2.7	16
69	35 / 35	67.1 - 76.1	7.7	35
Total	1,113 / 1,159	63.3 - 77.0	10.2	1,000

As shown in Table 3-2, of the 1,159 evaluated residences, 1,000 residences are predicted to be impacted by traffic noise with the proposed design changes. The following section of this NSRA provides the results of an evaluation to determine if noise barriers are/remain a potential feasible and reasonable abatement measure to reduce predicted traffic noise at the residences.

3.3 Noise Barrier Evaluation

Depending on the NSA, the noise barrier evaluation was performed to evaluate 1) whether a barrier would be a potentially feasible and reasonable noise abatement measure, 2) whether a barrier remains

a potentially feasible and reasonable noise abatement measure, or 3) whether an existing noise barrier should be potentially lengthened.

As a result of the initial PD&E Study, a noise barrier was not recommended for further analysis for NSA 49 because the reduction in highway traffic noise with a barrier did not meet the FDOT's noise reduction design goal (NRDG) of 7 dB(A) for one or more benefited receptors. Therefore, for this Re-evaluation, a full analysis was performed to determine if a noise barrier would be a potentially feasible and reasonable noise abatement measure for the residences in NSA 49.

For NSAs 54, 55, 57, 59, 61, 63, 66, and 67 the initial PD&E Study indicated that barriers were a potentially feasible and reasonable noise abatement measure. Therefore, the current analysis was performed only to confirm that the barriers remain a potentially feasible and reasonable noise abatement measure. This was accomplished by re-evaluating the optimal barrier height and length identified in the PD&E analysis (i.e., if the optimal noise barrier from the PD&E Study remains potentially feasible and reasonable with the proposed design changes, the noise barrier would be recommended for further analysis in the project's design phase).

At the beginning of Segment C (Gandy Boulevard), three noise barriers are currently being constructed—barriers for NSAs 69 (Village Green Mobile Home Park), NSA 70 (Bay Isle Key Apartments), and NSA 71 (Azure Apartments and The Villas of Carillon). Because the current design change has the potential to reduce the benefit of the barrier for the residences in NSA 69 and the barrier is being constructed at the maximum height, the current analysis only evaluated whether the NSA 69 barrier should be lengthened.

3.3.1 NSA 49

Since I-275 is elevated in this area, a shoulder barrier was evaluated for the 30 impacted residences in NSA 49 (Sunshine Park Subdivision). The results of the evaluation are provided in **Table 3-3**. As shown, at barrier heights from 10 to 14 feet, all 30 impacted residences would receive a benefit from a reduction in traffic noise of 5 dB(A) or more, the NRDG of 7 dB(A) would be achieved, and the cost of the noise barrier would be below the FDOT's cost reasonable criteria. A noise barrier is predicted to provide the minimum noise reduction requirements at a cost below the cost effective criteria, therefore the noise barrier was evaluated further.

Table 3-3. NSA 49: Noise Barrier Results

Barrier Height (feet)	Barrier Length (feet)	Noise Reduction at Impacted Residences (dB(A)) ¹			Number of Benefited Residences ²			Total Estimated Cost ³	Cost per Benefited Residence ⁴	Cost Reasonable Yes/No
		5 -5.9	6 – 6.9	≥7	Impacted	Not Impacted	Total			
Number of Impacted Residences = 30										
8	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵	NA ⁵
10	3,194	19	7	4	30	17	47	\$936,660	\$19,929	Yes
12	2,944	11	14	5	30	24	54	\$1,036,920	\$19,202	Yes
14 ⁶	2,666	13	12	5	30	24	54	\$1,097,580	\$20,326	Yes

¹ Receptors with a predicted noise level of 66 dB(A) or greater.

² Receptors with a predicted reduction of five dB(A) or more are considered benefited.

³ Based on a unit cost of \$30 per square foot.

⁴ FDOT cost reasonable criterion is \$42,000 per benefited receptor (in this case, per benefited residence).

⁵ 7 dB(A) reduction not achieved at any residence.

⁶ Shoulder barriers are limited to 14 feet in height.

A summary of the additional noise barrier considerations is provided in **Table 3-4**. Based on the review of these factors, a noise barrier was determined to be a potential noise abatement measure for the impacted residences in NSA 49. The limits of the most cost reasonable noise barrier (based on the results of this re-evaluation) are depicted on Sheets 10 and 11 in **Appendix B**.

Table 3-4 NSA 49: Additional Noise Barrier Considerations

Type of Factor	Evaluation Criteria	Comment
Feasibility	Design and Construction	A determination of whether a noise barrier can be constructed using standard construction methods and techniques will be made during the project's design phase. Additional costs to solely construct a noise barrier will be included in the final cost reasonableness evaluation of a noise barrier at this location. Because the noise barrier would be on structure over 5th Avenue North and 9 th Avenue North a determination will be required as to whether the existing structure is sufficient for the additional weight of a noise barrier.
	Safety	It does not appear that there would be any safety concerns (e.g., loss of sight distance).
	Accessibility	The noise barrier would be located on the roadway shoulder and would not block ingress or egress to any property.
	ROW	No acquisition of ROW or easements for construction/ maintenance would be necessary to construct a noise barrier within the FDOT's ROW.
	Maintenance	The FDOT should be able to maintain a noise barrier at this location using standard practices.
	Drainage	A determination as to whether the noise barrier can be designed so that water would be directed along, under, or away from the noise barrier will be made during the project's design phase.
	Utilities	A determination of utility conflicts will be made during the project's design phase.
Reasonableness	Community desires	The desires of the property owners and renters (if applicable) will be solicited during the design phase of the project.

3.3.2 NSAs 54, 55, 57, 59, 61, 63, 66, and 67

As previously stated, within Segment B, only the optimal noise barriers determined to previously be both a potentially feasible and reasonable noise abatement measure were evaluated for the proposed design changes. The results of the evaluation of the optimal barriers are provided in **Table 3-5**. As shown, the barriers for NSA 54, 55, 57, 59, 61, 63, 66, and 67 remain a potentially feasible and

reasonable noise abatement measure to reduce predicted highway traffic noise at the residences in these NSAs.

Table 3-5. NSAs 54, 55, 57, 59, 61, 63, 66, and 67: Noise Barrier Re-evaluation Results

NSA	Impacted? Yes/No	Height Corresponding to Lowest Cost Per Benefited Receptor (feet)	Length Optimized Based on the Design Changes (feet)	Is Noise Barrier Still Potentially Feasible and Reasonable? Yes/No		
				Feasible ¹	NRDG ²	Cost Reasonable ³
54/59	Yes	20	11,480	Yes	Yes	Yes
55/57	Yes	20	9,027	Yes	Yes	Yes
61	Yes	10	785	Yes	Yes	Yes
63/67	Yes	12	4,154	Yes	Yes	Yes
66	Yes	14	5,388	Yes	Yes	Yes

¹ The noise barrier should provide a reduction of at least 5 dB(A) for two or more impacted receptors.

² The noise barrier should provide a reduction of at least 7 dB(A) for at least one benefited receptor.

³ FDOT cost reasonable criterion is \$42,000 per benefited receptor.

Notably, should a final determination be made that noise barriers are a feasible and reasonable noise abatement measure during the project's design phase, and depending on the final length of the barrier, there is a potential for an outdoor advertising sign to be visually blocked in NSA 61. The sign is located north of 50th Avenue North (at latitude 27.818027, longitude -82.665280).

3.3.3 NSA 69

As previously stated, a noise barrier is currently being constructed to reduce traffic noise at the residences in NSA 69 and, because the barrier is being constructed at the maximum height (22 feet), the analysis for the design change was only performed to determine if the barrier should be lengthened. Based on results of the analysis for the current design change, without the existing noise barrier there would be 8 additional impacted receptors/residences than was identified in the July 2016 NSRA but all 8 would be benefited by the existing noise barrier (i.e., the traffic noise would be reduced at least 5 dB(A) at each newly impacted receptor/residence).

4.0 Conclusions

Future traffic noise levels with the proposed design changes are predicted to approach, meet, or exceed the NAC on 1,000 residences located adjacent to I-275 and between 5th Avenue North and Gandy Boulevard. The results of the highway traffic noise re-evaluation indicate that construction of noise barriers is a potentially feasible and reasonable noise abatement measure to reduce predicted traffic noise for:

- NSA 49: Residences in the Sunshine Park subdivision.
- NSAs 54 and 59: Residences in the Reisset, Bunson's Woodlawn Estates, Pine City, Townsend's R.I. Williamson's, Herkimer Heights, Shelton Heights, Clearview Park, Flemings, Harris School Park, Tetreault, Cross Corners, Larry's Bryan Heights, and Thrumstons Bilmar subdivisions.
- NSAs 55 and 57: Residences in the Brunson's Woodlawn, Pine City, Herkimer Heights, Benger's Rochester Heights, D.C. White, Coolidge Park, Lynndale, Mar-Mick, and Lakeside subdivisions, Silver Lake Mobile Home Resort, and North Ridge Mobile Home Park.
- NSA 61: Residences in the Heinz subdivision and the mobile home park in the southwest quadrant of I-275 and 54th Avenue interchange.
- NSAs 63 and 67: Residences in the Erle Renwick and Fairview Estates subdivisions and the Southern Mobile Home Park.
- NSA 66: Residences in the Chateaux Versailles, the Oaks at Meadowlawn, and the Meadowlawn Cardinal subdivisions.

Additionally, the existing noise barrier at NSA 69 (Village Green Mobile Home Park) does not have to be lengthened to remain a feasible and reasonable noise abatement measure.

4.1 Statement of Likelihood

The FDOT is committed to the construction of the potential noise barriers identified in this NSRA contingent on the following:

- Detailed noise analyses during the final design process supports the need, feasibility, and reasonableness of providing abatement;
- Cost analysis indicates that the cost of the noise barrier(s) will not exceed the cost reasonable criterion;
- Community input supporting types, heights, and locations of the noise barrier(s) is obtained; and
- Safety and engineering aspects as they relate to the roadway user and the adjacent property owner have been reviewed and any conflicts or issues resolved.

5.0 Noise Contours

Land uses such as residences and recreational areas are considered incompatible with highway noise levels that approach or exceed the NAC. To reduce the possibility of additional traffic noise-related impacts, noise level contours were developed for the future improved roadway facility. These noise contours delineate the extent of the predicted traffic noise impact area from the improved roadway's edge-of-pavement for each of the land use Activity Categories (Table 2-1). **Table 5-1** provides the distance from the edge-of-pavement at which traffic noise levels are predicted to be 56 dB(A)—the NAC for land uses classified as Activity Category A, to 66 dB(A)—the NAC for land uses classified as Activity Category B and C, and to 71 dB(A)—the NAC for land uses classified as Activity Category E.

Table 5-1. Noise Contour Limits

Roadway Segment	Distance from Improved Roadway's Edge-of-Pavement (ft)*		
	Activity Category A 56 dB(A)	Activity Category B/C 66 dB(A)	Activity Category E 71 dB(A)
5 th Avenue North to 22 nd Avenue North	1,215	435	255
22 nd Avenue North to 38 th Avenue North	1,200	455	255
38 th Avenue North to 54 th Avenue North	1,185	455	255
54 th Avenue North to 22 nd Street North	1,040	390	225
22 nd Street North to Gandy Boulevard	1,040	375	205

* See Table 2-1 for a description of the activities that occur within each category. Distances do not reflect any reduction in noise levels that would occur from existing structures (shielding) and should be used for planning purposes only.

Local officials will be provided a copy of the Final NSR to promote compatibility between any future land developments within the limits of the Design Change Re-evaluation.

TRAFFIC DATA FOR NOISE STUDIES
Page 2

Project: I-275 (SR 93) Pinellas PD&E Re-evaluation Study
State Project Number(s):
Financial Project ID: 424501-1-22-01
Federal Aid Number(s): TBD
Segment Description: I-275 (SR 93) from I-375 to north of 4th Street North

Date: 3/14/2019
Prepared By: HDR

(Data sheets are to be filled out for every segment having a change in traffic parameters such as volumes, posted speeds, typical section, etc.)
NOTE: Modeled ADT is the LOS(C) volume referenced in the FDOT LOS tables or demand, whichever is less.

Concept Plans and Noise Sensitive Receptors

I-275 (SR 93) DESIGN CHANGE RE-EVALUATION

Draft August 30, 2019

LEGEND:

- PAVEMENT WIDENING/RECONSTRUCTION
- PAVEMENT REMOVAL
- BARRIER WALL
- BRIDGE WIDENING

- PEDESTRIAN TRAIL
- EXPRESS LANE BRIDGE
- EXPRESS LANES
- BRIDGES
- KENWOOD HISTORIC DISTRICT

- SEAGRASS
- WETLANDS
- SURFACE WATER
- MANGROVES

- FLOOD PLAINS
- CONTAMINATION
- POTENTIAL RESIDENTIAL RELOCATION
- POTENTIAL NOISE BARRIER

- PROPOSED LA R/W
- EXISTING LA R/W
- PROPOSED EASEMENT
- PREFERRED SMF SITE & PROPOSED SMF R/W

- ITS CAMERA
- EL = EXPRESS LANES
- GUL = GENERAL USE LANES
- AUX = AUXILIARY LANES

Aerial Photos Jan. '18 - Apr. '18
