EXECUTIVE SUMMARY

The Florida Department of Transportation (FDOT) is conducting a Project Development and Environment (PD&E) study to evaluate alternative improvements for State Road (SR) 50 (US 98/Cortez Boulevard) from the Brooksville Bypass to west of Interstate 75 (I-75) in Hernando County. The study extends to Lockhart Road on the east end of the project for a length of approximately 7.2 miles. The section along SR 50 to the east of Lockhart Road was studied as a part of a separate Federal Highway Administration (FHWA) approved PD&E study – SR 50 (Cortez Boulevard) from Lockhart Road to US 301 (SR 35/Treiman Boulevard), WPI Segment No. 416732-2. Study objectives include: determine proposed typical sections and develop preliminary conceptual design plans for proposed improvements, while minimizing impacts to the environment; consider agency and public comments; and ensure project compliance with all applicable federal and state laws. A *Type 2 Categorical Exclusion* is being prepared as part of this study. The highway is expected to be improved from an existing, four-lane divided rural facility to a six-lane divided facility. The proposed improvements will include construction of stormwater management and floodplain compensation facilities and various intersection improvements, in addition to multimodal facilities (pedestrian, bicycle and transit accommodations).

In accordance with the FDOT's *PD&E Manual* and the Federal Highway Administration (FHWA) requirements, this *Contamination Screening Evaluation Report (CSER)* has been prepared for this PD&E Study. This *CSER* was prepared pursuant to the FHWA's Technical Advisory 26640.8a, dated October 30, 1987, and the FDOT's *PD&E Manual, Part 2, Chapter 20 Contamination* (revised January 14, 2019). Risk ratings were assigned to each potential contamination site after reviewing data obtained from regulatory site lists, historical land uses and on-site field visits.

All corridor properties within a quarter mile were evaluated to the extent necessary for potential contamination sources within or near the limits of the project corridor, as well as potential contamination involvement within preferred stormwater management facilities (SMF) or floodplain compensation (FPC) sites not directly adjacent to the project corridor (**Appendix E**). Twenty (20) sites were considered to have potential for contamination. Three (3) sites were rated as High risk, three (3) sites were rated as Medium risk, and twelve (12) sites were rated as Low risk for potential contamination. All of the sites rated as High or Medium risk for potential contamination are or have been in state or federal cleanup programs. A list of these locations is included in **Table 4-1**. Two sites, W. Clyde Daniels Construction Inc. (site 6) and Blanche's (site 9) have known contamination within FDOT right of way (ROW). The remaining sites were rated as having No risk based on review of available data, historical aerials and the field review of the sites. Four (4) solid waste sites were also identified within one mile of the corridor. SMF-6B was rated Medium risk for potential contamination, due to the close proximity to two identified sites 9, 10, and 11.

All of the sites rated as High or Medium risk for potential contamination are or have been in state or federal cleanup programs.

Based on the conclusions of the study and the risk ratings noted above, the following recommendations are made for this project:

1. For the sites rated “No” for potential contamination, no further action is recommended. These sites have been evaluated and determined not to have any potential environmental risk to the study area at this time.
2. For sites rated “Low” for potential contamination, no further action is required at this time. These sites/facilities have potential to impact the study area, but based on select variables have been determined to have low risk to the corridor at this time. Variables that may change the risk rating include a facility’s non-compliance to environmental regulations, new discharges to the soil or groundwater, and modifications to current permits. Should any of these variables change, additional assessment of the facilities should be conducted.
3. For those locations with a risk rating of “Medium” or “High”, including preferred SMF and/or FPC sites, a Level II field screening should be conducted. These sites have been determined to have potential contaminants, which may impact the SR 50 corridor. A soil and groundwater sampling plan should be developed for each site. The sampling plan should provide sufficient detail as to the number of soil and groundwater samples to be obtained and the specific analytical test to be performed. A site location sketch for each facility showing all proposed boring locations and groundwater monitoring wells should be prepared.
4. Additional information may become available or site-specific conditions may change from the time this report was prepared and should be considered prior to acquiring ROW and/or proceeding with roadway construction.

SECTION 1 INTRODUCTION

1.1 PD&E STUDY PURPOSE

The objective of this Project Development and Environment (PD&E) study is to assist the Florida Department of Transportation (FDOT) in reaching a decision on the type, location, and conceptual design of the proposed improvements for widening State Road (SR) 50 (US 98/Cortez Boulevard) from the Brooksville Bypass to west of Interstate 75 (I-75) in Hernando County.

The PD&E study satisfies all applicable requirements in order for this project to qualify for federal funding of subsequent development phases (design, right of way [ROW] acquisition, and construction). This project was screened through FDOT's Efficient Transportation Decision Making (ETDM) process as Project #13980. The *Final Programming Screen Summary Report* (PSSR) was published on January 7, 2014. A *Type 2 Categorical Exclusion* will be prepared as part of this study.

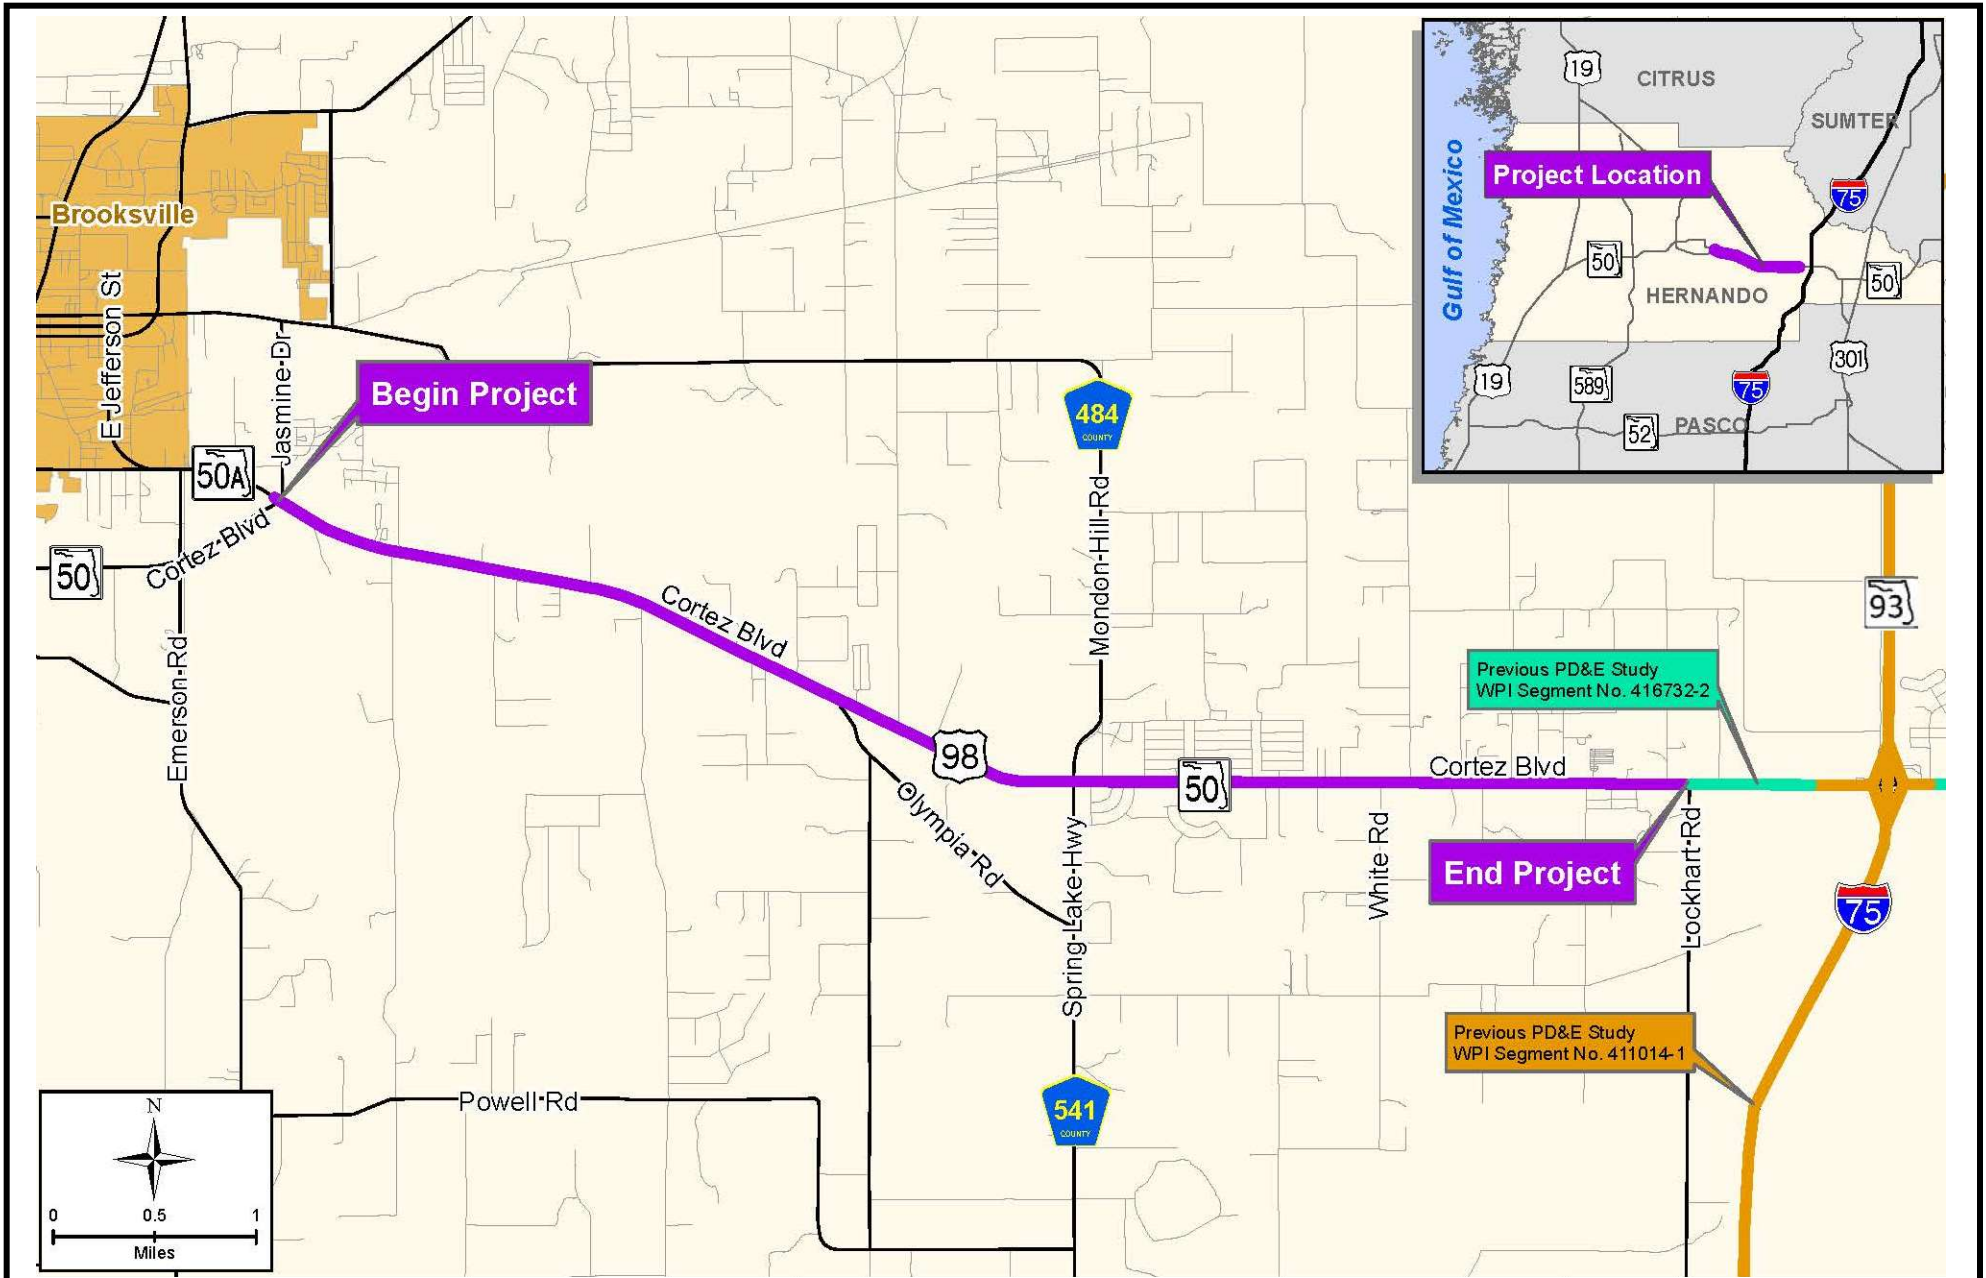

1.2 PROJECT DESCRIPTION

In order to accommodate projected traffic increases along SR 50, the FDOT is conducting a PD&E study to evaluate alternative capacity and operational improvements from the Brooksville Bypass to west of I-75 (**Figure 1-1**).

The study area extends to Lockhart Road on the east end of the project for a length of 7.2 miles. The section along SR 50 to the east of Lockhart Road was studied as a part of a separate Federal Highway Administration (FHWA) approved PD&E study – SR 50 (Cortez Boulevard) from west of I-75 to US 301 (SR 35/Treiman Boulevard), Work Program Item (WPI) Segment No. 416732-2, with the I-75 interchange area excepted out under WPI Segment No. 411011-2. Improvements for the Lockhart Road intersection were included in WPI Segment No. 416732-2. The highway is expected to be improved from an existing, four-lane divided rural facility to a six-lane divided facility. The proposed improvements will include construction of stormwater management and floodplain compensation facilities and various intersection improvements, in addition to multimodal facilities (pedestrian, bicycle and transit accommodations).

1.3 EXISTING FACILITY AND PROPOSED IMPROVEMENTS

SR 50 is currently a four-lane rural highway with 4-ft paved outside shoulders and 40 – 46-ft grassed median (**Figure 1-2**). The existing ROW is 200 feet wide. The posted speed limits vary from 45 mph to 60 mph. Major intersections within the project limits occur at Cortez Boulevard/Jasmine Drive, County Road (CR) 484/Spring Lake Highway and Lockhart Road (west of I-75). There is a short segment with existing sidewalk located near the west end of the project. There is a bridge culvert within the project limits located over the Bystream Overflow. This 53-ft bridge culvert was constructed in 1997 and has a sufficiency rating of 80 and a health index of 65.72 (inspected January 22, 2019). Expected improvements are described above in **Section 1.2**.

State Road 50 PD&E Study
From the Brooksville Bypass
to west of Interstate 75
 WPI Segment No. 430051 1 - Hernando County

Project Location and Study Area Map

Figure 1-1

West Portion of Study Area

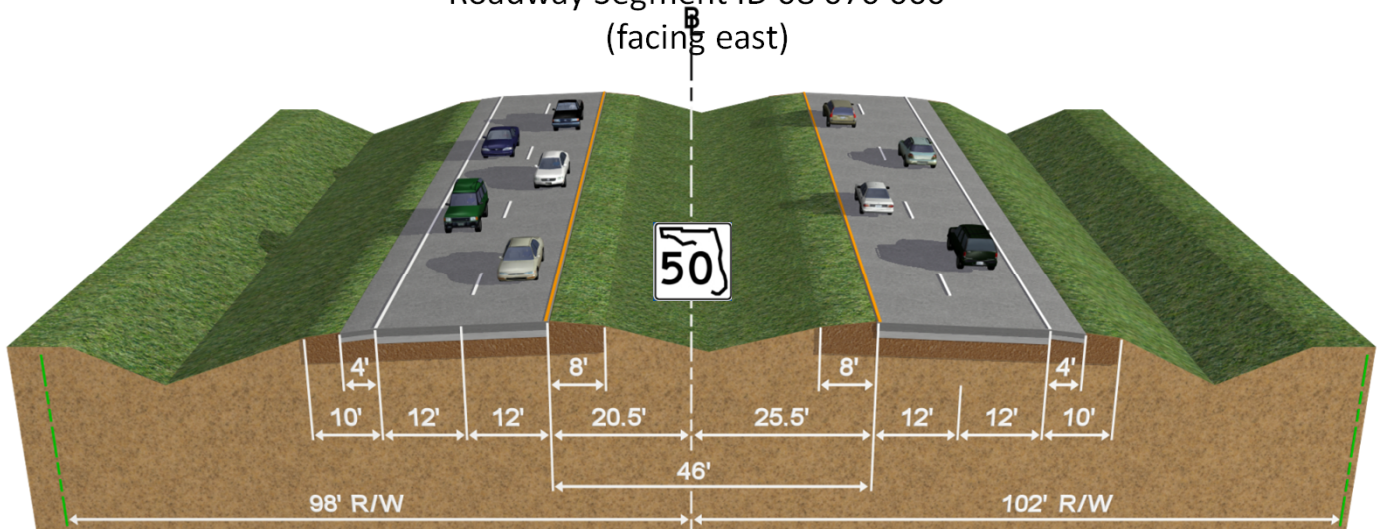

Roadway Segment ID 08 050 000
(facing east)

- From SR 50A/Brooksville Bypass/Cortez Blvd to Spring Lake Highway/Mondon Hill Road (4.2 miles)
- Posted Speed Varies: 45 mph at west end transitions to 60 mph throughout most of section
- Existing Context Classification: C2 Rural
- Sidewalks along western mile of segment

East Portion of Study Area

Roadway Segment ID 08 070 000
(facing east)

- From Spring Lake Highway/Mondon Hill Road to Lockhart Road (3.0 miles)
- Posted Speed Varies: 60 mph throughout most of section, transitions to 55 mph just west of Lockhart Road
- Existing Context Classification: C3R Suburban Residential

Proposed typical sections include rural and suburban typical sections (**Figure 1-3**). A six-lane rural section is proposed from the western project limits to east of Mondon Hill Road/Spring Lake Highway and a suburban typical section within the 200-foot existing ROW is proposed from east of Mondon Hill Road/Spring Lake Highway to Lockhart Road. No additional ROW is anticipated for the roadway improvements with the exception of small corner clips at intersections along the corridor. Additional ROW will be needed for stormwater management facilities and floodplain compensation site. A “No-Build” Alternative is also being evaluated.

1.4 PROJECT PURPOSE AND NEED

SR 50 is a major east-west rural principal arterial that spans central Florida from coast to coast. In Hernando County, SR 50 connects to several regionally significant corridors, including US 19, SR 589 (Suncoast Parkway), US 41, I-75, and US 301. SR 50 is also a hurricane evacuation route, a designated truck route, part of the Strategic Intermodal System (SIS) and part of the West Central Florida Metropolitan Planning Organization Chairs Coordinating Committee’s (CCC) Regional Roadway Network. This segment of SR 50 connects the City of Brooksville to I-75.

The purpose of this project is to address projected roadway congestion for SR 50 due to future growth along the project corridor and within Hernando County. Increasing roadway capacity along this segment of SR 50 will accommodate future growth, provide for enhanced emergency response times and emergency evacuation, and work in conjunction with other projects planned or underway to increase the capacity of SR 50. The annual average daily traffic (AADT) within the study limits varied between 18,150 and 22,700 vehicles per day (VPD) in 2014. Year 2040 AADTs based on the Tampa Bay Regional Planning Model (TBRPM Version 7.2) are predicted to range from 47,400 to 59,100 VPD. This would result in level of service (LOS) “F” at the major intersections.

Within the limits of this PD&E study, the Hernando/Citrus Metropolitan Planning Organization’s (MPO) 2045 Long Range Transportation Plan (LRTP), adopted on December 4, 2019, shows a need for improving SR 50 to 6 lanes. The LRTP shows funding for the design phase and right of way for expansion to 6 lanes in the *Cost Feasible Plan*.

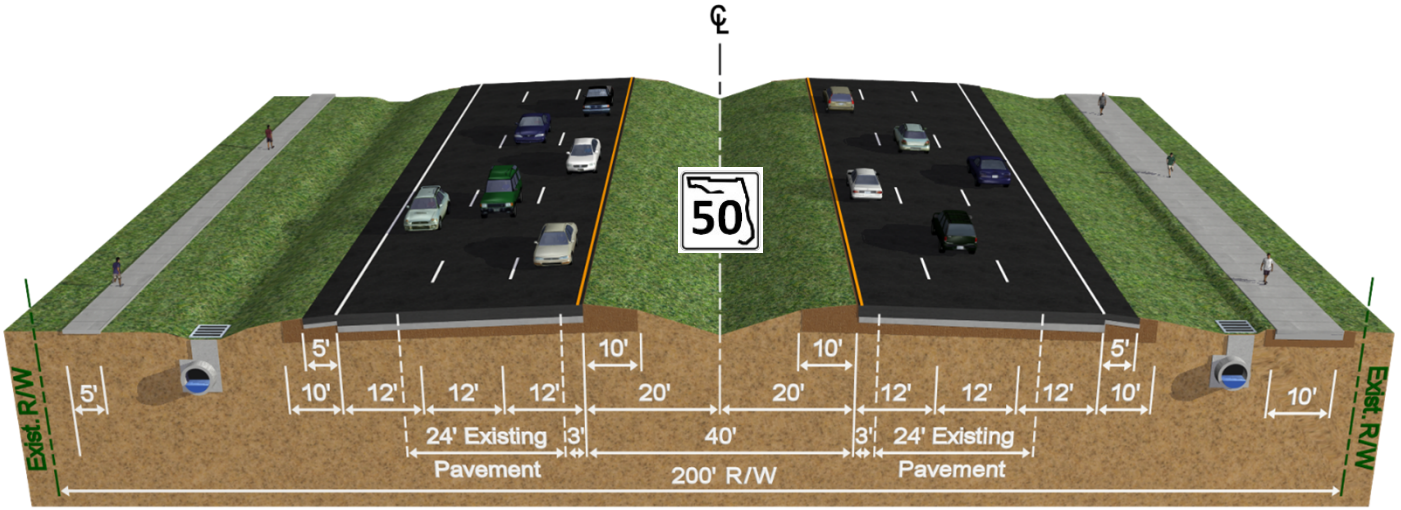

A more detailed discussion of the project’s purpose and need is included in the *ETDM Programming Screen Summary Report*, under ETDM project number 13980.

West Segment of Study Area

Roadway Segment ID 08 050 000

6-Lane Rural Typical Section – facing east

(from west limit of PD&E Study at SR 50/Brooksville Bypass to just east of Spring Lake Highway/Mondon Hill Road)

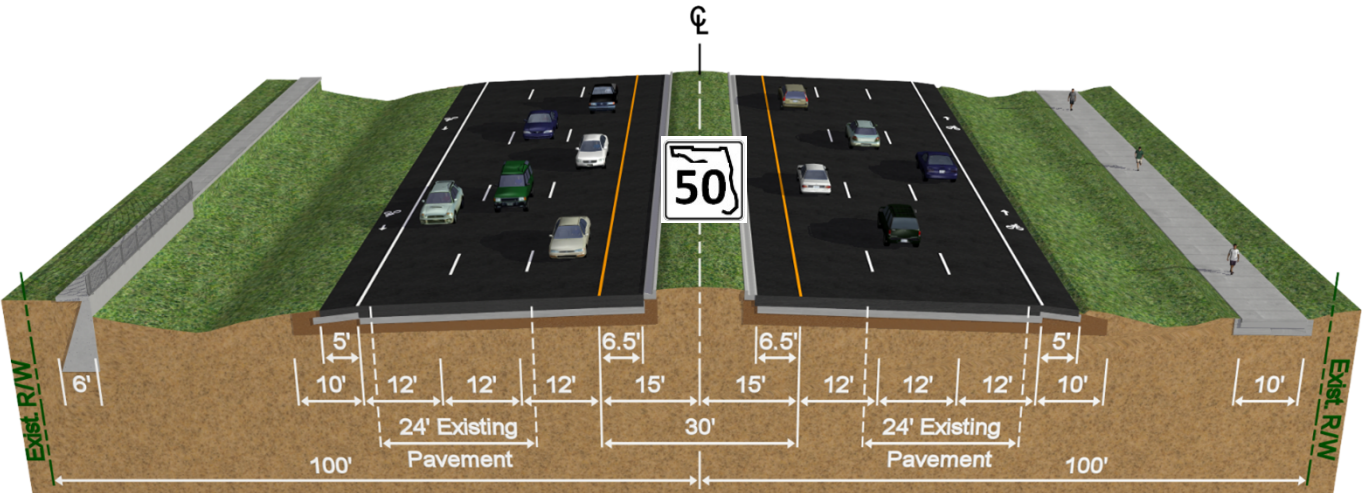

- Provides for 65 mph design speed
- Border width design variation required for left and right roadway sides (6 ft below standard)

East Segment of Study Area

Roadway Segment ID 08 070 000

6-Lane Suburban Typical Section – facing east

(from just east of Spring Lake Highway/Mondon Hill Road to east limit of PD&E study west of I-75 at Lockhart Road)

- Provides for 50 mph design speed

1.5 REPORT PURPOSE

This *CSE* is one of several documents that is being prepared as part of this PD&E study. The intent of this report is to determine if potential contamination conditions exist that may have adverse environmental impacts, and thus create environmental liability within the project area, including potential stormwater management facilities (SMF) and floodplain compensation (FPC) sites. By evaluating potentially contaminated properties/sites early in the project development process, those sites can be avoided or remediation costs established. In addition, this will help prevent delays in construction. This evaluation was prepared in accordance with the Federal Highway Administration's (FHWA) Technical Advisory 26640.8a, dated October 30, 1987, and with the FDOT's *PD&E Manual Part 2, Chapter 20 Contamination* (effective January 14, 2019). This report identifies and evaluates known or potential contamination problems, presents recommendations concerning these potential problems, and discusses possible impacts to the proposed project area.

SECTION 2 LAND USE

2.1 EXISTING LAND USE

Land use and vegetative cover within and adjacent to the project area was classified using the FDOT's Florida Land Use, Cover and Forms Classification System (FLUCCS). The study corridor, located in Hernando County, is mostly rural with some areas of development. The largest development is located east of Spring Lake Highway/Mondon Hill Road and west of Lockhart Road. FLUCCS data, aerial photographs and wetland data from the National Wetlands Inventory (NWI) were utilized to determine current land use and habitat types within the corridor. The land uses and habitat types within the project corridor were subsequently ground-truthed for verification during field visits. The land uses were identified by their FLUCCS description as well as the FLUCCS code (number that represents the type of land use). For evaluating existing land use within the project area, a 300-foot buffer was created from the centerline of SR 50 as shown in **Appendix A. Table 2-1** shows the land use acreages identified within the 300-foot buffer as well as the percent cover of each land use along the project corridor. The major land uses along the corridor are as follows: approximately 33 percent of the landscape adjacent to the project area is classified as cropland and pastureland (210), 33 percent transportation (810), 10 percent hardwood conifer mixed (434) and 9 percent residential low density. The remainder of the land uses and their percent cover are shown below in **Table 2-1**.

2.2 FUTURE LAND USE

The Hernando County Comprehensive Plan Evaluation and Appraisal Report Future Land Use Map, effective on May 23, 2019, was reviewed. The data is provided by the Hernando County Planning Department and shows the future land use for 2040. The majority of planned future land uses along the corridor include rural, residential, commercial, and recreation, with planned development located near the eastern end of the project limits.

2.3 GEOLOGY/HYDROLOGY

The Natural Resources Conservation Service's (NRCS) *Soil Survey of Hernando County Area* provides general descriptions of subsurface conditions of the county. According to the soil survey, Hernando County lies within the Brooksville Ridge physiographic region. The Brooksville Ridge occupies most of the county and can be divided into two parts. The western and eastern edges have rolling, deep, sandy ridges dominated by deep, sandy soils with numerous depressions and sinks. Elevations range from 75 to 100 feet in the western part and from 50 to 100 feet in the eastern part. The rolling central part ranges in elevation from about 100 feet to more than 200 feet and consists of poorly drained to well drained sandy to clayey soils.

Table 2-1 Existing Land Use

FLUCCS	Land Use Description	Acreage (Approx. 300' from Centerline)	Percent Cover
110	Residential Low Density < 2 Dwelling Units	736.8	9.0%
120	Residential Medium Density 2 - >5 Dwelling Units	234.6	2.9%
130	Residential High Density	217.2	2.7%
140	Commercial and Services	81.4	1.0%
150	Industrial	2.9	<0.1%
190	Open Land	86.4	1.1%
210	Cropland and Pastureland	2697.2	33.0%
240	Nurseries and Vineyards	6.6	0.1%
260	Other Open Lands (Rural)	10.6	0.1%
411	Pine Flatwoods	34.8	0.4%
412	Longleaf Pine - Xeric Oak	284.2	3.5%
434	Hardwood Conifer Mixed	814.4	10.0%
440	Tree Plantations	123.0	1.5%
520	Lakes	16.3	0.2%
530	Reservoirs	8.7	0.1%
615	Stream and Lake Swamps (Bottomland)	2.8	0.0%
641	Freshwater Marshes	81.7	1.0%
643	Wet Prairies	31.1	0.4%
644	Emergent Aquatic Vegetation	3.3	0.0%
740	Disturbed Land	3.3	0.0%
810	Transportation	2702.0	33.0%
TOTAL		8179.3	100.0%

The project is also located within a karst area with the potential for sinkholes. Karst terrain is characterized by springs, caves, sinkholes, and a unique hydrogeology that results in aquifers that are highly productive but extremely vulnerable to contamination. Sinkholes are numerous in this region. The United States Geological Survey (USGS) *Ground Water Atlas of the United States* shows that Hernando County is underlain by the Floridan Aquifer System. The Floridan aquifer system is one of the most productive aquifers in the world. This aquifer system underlies an area of about 100,000 square miles in southern Alabama, southeastern Georgia, southern South Carolina, and all of Florida. Most of the aquifer system is divided into the Upper and Lower Floridan aquifers, separated by a less-permeable confining unit. The Floridan aquifer system varies in thickness. It is thickest in Central Florida and a small portion of the panhandle. In the area of the project corridor the thickness is approximately 2,800 feet. In the northeast boundary area it is less than 400 feet thick. Water in the Upper Floridan aquifer moves from high to low areas on the potentiometric surface. Water moves coastward in all directions from the potentiometric high in central Florida.

Recharge of the aquifer is through sinkholes, infiltration, and lateral movement along the hydraulic gradient.

The large-scale solution porosity that develops as a result of dissolution of the carbonate rocks in the Floridan aquifer system creates large conduits in some places that store and transmit ground water. These conduits, which include caves, solution channels, and sinkholes, are like large-diameter pipes or channels in that they allow tremendous volumes of water to pass quickly through the aquifer with little resistance to flow. Transmissivity, or the capacity of an aquifer to transmit water, is one way of measuring the relative ease with which ground water moves. The greater the transmissivity, the more readily water is able to move through the aquifer. All of the area having a transmissivity greater than 1,000,000 feet squared per day and most of the area having transmissivity from 250,000 to 1,000,000 feet squared per day are where the upper confining unit of the Floridan aquifer system is less than 100 feet thick, or is absent. The project corridor has a transmissivity of 250,000 to 1,000,000 feet squared per day.

2.4 SOIL SURVEY REVIEW

The NRCS *Soil Survey of Hernando County* (July 1977) and geographic information system (GIS) data indicate that there are multiple soil types that exist within and adjacent to the project area. The dominant soil types and their soil map unit identification numbers are as follows: Candler fine sand, 0 to 5 percent slopes (14), Sparr fine sand, 0 to 5 percent slopes (47), Blichton loamy fine sand, 2 to 5 percent slopes (12), and Nobleton fine sand, 0 to 5 percent slopes (36). Soils within a 1,000-foot buffer from the centerline of the project were evaluated. Acreages and percentages of soil types within the project buffer can be found in **Table 2-2**. A detailed soils map can be found in **Appendix B**. A brief description of dominant soil types is provided below:

Candler fine sand, 0 to 5 percent slopes (14) – This soil is nearly level to gently sloping and excessively drained in very large to small areas on uplands. This soil has very low water capacity in the upper 48 inches and low water capacity below that depth. The water table is below a depth of 80 inches. Native vegetation consists of bluejack, post and turkey oaks, with scattered longleaf and slash pines, and a sparse understory of indiagrass, chalky bluestem, pineland three-awn, panicum, and annual forbs.

Sparr fine sand, 0 to 5 percent slopes (47) – This soil is nearly level to gently sloping and somewhat poorly drained. It is on seasonally wet, sandy areas on uplands. In most years, the soil has a water table perched on the loamy materials for 1 to 4 months. Native vegetation consists of oaks, hickory, magnolia, sweetgum and slash, longleaf and loblolly pines.

Blichton loamy fine sand, 2 to 5 percent slopes (12) – This is a gently sloping, poorly drained soil that is commonly in small areas on uplands. The water table is at a depth of less than 10 inches for 1 to 4 months during most years. During the dryer season, the water table drops to depths of more

than 40 inches. Natural vegetation includes oaks, hickory, magnolia, sweetgum, pineland threeawn, and slash, longleaf and loblolly pines.

Nobleton fine sand, 0 to 5 percent slopes (36) – This soil is nearly level to gently sloping, somewhat poorly drained and usually found on broad areas in uplands. This soil has a perched water table at a depth of 20 to 40 inches for 1 to 4 months during the rainy season in most years. Natural vegetation includes live, laurel and water oaks, slash and longleaf pines, hickory, magnolia and sweetgum. Understory consists of wax myrtle, briars, and native grasses including bluestem, pineland three-awn, toothache grass, panicums, and lopsided indian-grass.

Table 2-2 Existing Soils (NRCS)

Map Unit Symbol	Description	Acreage (Approx. 1,000' from Centerline)	Percentage
6	Arredondo fine sand, 0 to 5 percent slopes	25.8	1.4%
11	Blichton loamy fine sand, 0 to 2 percent slopes	24.1	1.3%
12	Blichton loamy fine sand, 2 to 5 percent slopes	249.8	13.6%
13	Blichton loamy fine sand, 5 to 8 percent slopes	16.2	0.9%
14	Candler fine sand, 0 to 5 percent slopes	560.3	30.5%
15	Candler fine sand, 5 to 8 percent slopes	80.3	4.4%
19	Electra variant fine sand, 0 to 5 percent slopes	16.2	0.9%
20	Flemington fine sandy loam, 0 to 2 percent slopes	7.6	0.4%
21	Flemington fine sandy loam, 2 to 5 percent slopes	89.2	4.8%
25	Floridana variant loamy fine sand	71.9	3.9%
28	Kanapaha fine sand	20.7	1.1%
29	Kendrick fine sand, 0 to 5 percent slopes	28.1	1.5%
34	Micanopy loamy fine sand, 2 to 5 percent slopes	42.6	2.3%
36	Nobleton fine sand, 0 to 5 percent slopes	228.7	12.5%
41	Pits	16.1	0.9%
47	Sparr fine sand, 0 to 5 percent slopes	251.8	13.7%
49	Tavares fine sand, 0 to 5 percent slopes	4.9	0.3%
52	Wauchula fine sand, 0 to 5 percent slopes	97.1	5.3%
99	Water	4.8	0.3%
TOTAL		1836.2	100.0%

SECTION 3 METHODOLOGY

This *CSE*R was prepared in accordance with the FHWA's Technical Advisory 26640.8a, dated October 30, 1987, and with the FDOT's *PD&E Manual Part 2, Chapter 20 Contamination* (effective January 14, 2019). A preliminary evaluation of SR 50 was conducted to determine potential contamination problems within the proposed project limits from properties or operations located within the vicinity of the project. This evaluation consisted of the following tasks:

1. Review of data collected through the FDOT's Efficient Transportation Decision Making (ETDM) process, ETDM No. 13980.
2. Review of a regulatory database search of the project corridor that was requested from Environmental Data Resources, Inc. (EDR) which is based on American Society for Testing and Materials (ASTM) International Standards E-1527 and E-1528.
3. Obtained and evaluated current and historical aerial photographs for years 1951, 1977, 1984, 1995, 2004 and 2017 to determine potential contamination problem areas.
4. Conducted site visits to verify information from desktop and database reviews and to identify other potential sources of contamination within the vicinity of the project.
5. Determine the contamination potential risk rating (no, low, medium, high) for each property within the proposed project limits.

Sites identified as contaminated or potentially contaminated were further evaluated to determine the extent of contamination or the risk of contamination. The assignment of a risk rating was based on the current and past existence of hazardous materials or petroleum products and the potential of the material/product to be encountered during proposed roadway expansion activities. The rating system developed by the FDOT as part of the PD&E process expresses the likelihood that hazardous material or petroleum products exist and the potential impact on roadway construction.

3.1 DEFINITIONS

3.1.1 Hazardous Material

Hazardous material is defined as any material that has, or when combined with other materials will have, a deleterious effect on people or the environment, as further discussed and defined in 42 United States Code (USC), Section 9601, et seq.

3.1.2 Solid Waste

The Resource Conservation and Recovery Act (RCRA) defines a solid waste as: "any garbage, refuse, sludge from a waste treatment plant, water supply treatment plant, or air pollution control facility and other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from industrial, commercial or mining and agricultural operations, and from community activities...[excluding]...solid or dissolved material in domestic sewage, or solid or dissolved materials

in irrigation return flows, or industrial discharges which are point sources subject to permits under Section 402 of the Federal Water Pollution Control Act.”

3.1.3 Hazardous Waste

Under RCRA, no material can be a hazardous waste unless it is a solid waste. In RCRA, the statutory definition of a hazardous waste is: “...a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may – (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.” [Section 1004(5)]

Furthermore, a solid waste is a hazardous waste if it is not excluded by regulation [40 Code of Federal Regulations (CFR) 261.4] and if it is listed (261.30) as a hazardous waste, is a waste mixture containing one or more listed hazardous wastes, or exhibits one or more characteristics of hazardous waste (i.e. ignitibility, corrosivity, reactivity, or toxicity) (40 CFR 261.21 to 261.24). Listed wastes meet the definition of hazardous waste regardless of the concentration level of hazardous constituents in them. With few exceptions [e.g., spent solvents listed solely because they are ignitable (40 CFR 261.31), the only way to have a listed waste relieved from hazardous waste management requirements is to petition the United States Environmental Protection Agency (EPA) or a state to delist the waste (40 CFR 260.22).

When listed wastes are mixed with nonhazardous wastes or materials, the mixture must be managed as hazardous waste. Two exceptions to this approach are hazardous debris meeting Land Disposal Restriction (LDR) standards [40 CFR 261.3(f)] and residues from processing certain wastes using high temperature metals recovery processing [40 CFR 261.3(c)(2)(ii)(C)]. In contrast to listed waste, a characteristic waste remains hazardous only as long as it exhibits a hazardous characteristic. Therefore, a mixture of waste is not considered hazardous waste unless the mixture exhibits a hazardous waste characteristic.

3.1.4 Potential Hazardous Waste Sites

For the purposes of this report, a potential hazardous waste site is a parcel of land upon which hazardous materials are or were produced, stored or accumulated, regardless of the disposal method. Included in this category are facilities that store, use or produce hazardous products, materials, or waste. This definition is not meant to imply that these sites are contaminated, but that the operations conducted on them involve hazardous materials and the overall potential exists for contamination if these materials were not properly handled on these sites. This definition also does not mean that petroleum products from gas station activities fall under regulatory scrutiny within hazardous waste regulations by either the EPA or the Florida Department of Environmental Protection (DEP).

3.1.5 Contamination

Contamination is defined as the presence of any regulated material/chemical contained within the soil, surface water or groundwater on or adjacent to Department property, or proposed project property, that may require assessment, remediation, or special handling, or that has a potential for liability. These materials would include, but not be limited to, those substances normally referred to as petroleum or petroleum products, solvents, organic and inorganic substances, metals, hazardous materials or substances, etc.

3.2 EFFICIENT TRANSPORTATION DECISION MAKING

The *Final Programming Screen Summary Report* was published on January 7, 2014, as part of the FDOT's ETDM process. The project is designated as #13980 in ETDM. The FHWA determined that the project qualifies as a Type 2 Categorical Exclusion (CE).

Through ETDM, the FDOT District Seven evaluated comments regarding contamination from the EPA, DEP, and the Southwest Florida Water Management District (SWFWMD). The FDOT recommended a Degree of Effect of Minimal, stating "The EST GIS analysis identified one Biomedical Waste Facility within the 100-foot buffer distance and one Hazardous Waste Facility, six Limited Use Drinking Water Wells, 13 Petroleum Contamination Monitoring Sites, 28 Superfund Act Well Sites, three USEPA Resource Conservation and Recovery Act Regulated Facilities, and five Superfund Act Risk Sources within the 500-foot buffer distance." The EPA, DEP and the SWFWMD also gave a Degree of Effect of Minimal. Relevant excerpts from the *Final ETDM Programming Screen Summary Report* are found in **Appendix C**.

3.3 HISTORICAL AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs of the study area were reviewed to identify and evaluate potential contamination impacts to the proposed project from past land uses. Historical aerial photographs of the study area were reviewed for the entire project corridor for years 1951, 1977, 1984, 1995, 2004 and 2017. The historical aerials from years 1951-2004 can be found in **Appendix D**. Year 2017 aerials are included in **Appendix E**. A description of each aerial relative to the potentially contaminated sites can be found in **Section 5.1**.

3.4 PUBLIC RECORD REVIEW AND SITE RECONNAISSANCE

Current government records were compiled by EDR for a radius of at least one mile around the alternative alignments. This included federal records (e.g., RCRA sites, CERCLA sites) and state records (e.g., DEP Leaking Underground Storage Tanks [LUST] and Underground Storage Tanks [UST]). The EDR report, which includes the complete list of databases searched, is provided as **Appendix F**. The database research includes an evaluation of the following:

1. National Priorities List (NPL) and Proposed NPL
2. Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)

3. No Further Remedial Action Planned (NFRAP)
4. Resource Conservation and Recovery Information System Treatment, Storage and Disposal Facilities (RCRA TSD)
5. Resource Conservation and Recovery Information System Sites (RCRA COR and RCRA GEN)
6. Emergency Response Notification System (ERNS)
7. Florida Sites List (FSL)
8. Solid Waste Facilities (SWF)
9. FL Cattle Dipping Vats
10. Dry Cleaning Facilities
11. Underground Storage Tank (UST) Database
12. Aboveground Storage Tank (AST) Database
13. Tribal Land Underground Storage Tanks
14. Leaking Underground Storage Tanks (LUST) List
15. Stationary Tank Inventory (STI) System
16. DEP OCULUS database management system

In addition to the database search of potential contamination sites, site reconnaissance was conducted in August 2015 and April 2019. The purpose of the site visits were to observe signs of other possible contamination sources not listed in the database search, to supplement the database results, and to verify the data collected during the desktop review. The site reconnaissance included driving the corridor for observation of land uses, observation of potential signs of contamination through pedestrian surveys, where accessible, and documentation of the results. All parcels within and adjacent to the project area and potential SMF and FPC sites were evaluated in the field. The field reviews included the following:

- Potential sources of surface contamination
- Potential sources of airborne contamination
- Potential sources of waterborne contamination
- Tenant activities and general site conditions
- Signs of contamination such as stressed or dead vegetation, refuse and the presence of underground/aboveground storage tanks

3.5 RISK RATINGS

Sites identified as contaminated or potentially contaminated were further evaluated to determine the extent of or potential risk of contamination. The assignment of a risk rating was based on the current and past existence of contamination and the potential of the contamination to be encountered during proposed roadway expansion activities. The rating system developed by the FDOT as part of the PD&E study process expresses the likelihood that contamination exists and the potential impact on roadway construction. The contamination rating system is divided into four degrees of risk including No, Low, Medium, and High potential for risk. The risk ratings are defined by the FDOT *PD&E Manual Part 2, Chapter 20 Contamination* as follows:

3.5.1 No Risk

A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.

3.5.2 Low Risk

A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.

3.5.3 Medium Risk

After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium". Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.

3.5.4 High Risk

After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

A recommendation for each site with a rating of medium or high should include a listing of the analytical parameters of concern and media (e.g., soil, groundwater), a discussion of potential involvement with ROW acquisition and/or construction and if the site is anticipated to warrant additional (Level II or III) assessment.

SECTION 4 PROJECT IMPACTS

The EDR report produced information on 22 potentially contaminated facilities near the project area. Of these, 19 are located adjacent to the project area and SMF and FPC sites and were identified to have potential sources of contamination, and three of them were located outside of the project area and not discussed further in this report. One additional site was discovered during field reviews, for a total of 20 sites evaluated as part of this CSER. These sites are shown in **Appendix E** and summarized in **Table 4-1**. Each of these 20 locations was searched in DEP's OCULUS database, an electronic document management system containing documents from the Storage Tanks, Hazardous Waste, Solid Waste, and Waste Cleanup Program Areas. This section provides a description of each potential site, documenting the rationale for the risk rating issued. These sites represent the comprehensive list as determined from a combination of data sources. The rating of each site is based on the Recommended Build Alternative.

Four (4) solid waste sites were identified within one mile of the project area. Two of the solid waste sites were not discussed in this report as contamination from these sites is not likely due to their distance from the project area. The remaining two facilities (Consolidated Resource Recovery and W. Clyde Daniels Construction Inc.) are discussed below.

4.1 POTENTIAL CONTAMINATED SITE IMPACTS

Summary evaluations for all sites determined to be potentially contaminated within or adjacent to the project area are presented below. Site photos of each site are shown in **Appendix G**. Additional site information obtained from DEP's OCULUS database is provided in **Appendix H**. No further evaluation was provided for the remaining sites found to have No risk for potential contamination based on available data and historical aerials.

Potential Contamination Site 1 – Brooksville Truck Repair

DEP Facility ID: N/A

The Brooksville Truck Repair facility is located at 804 Sardis Street. According to the property appraiser, the site is listed as P&F Enterprises Inc. A for-sale sign was also located on site. According to the Hernando County Property Appraiser's website, the building was first constructed in 1960. The building is difficult to see from the aerials until 1995. Prior to this, the parcel appears to be undeveloped, with one business located to the west as early as 1977. However, based on historical aerials on Google Earth, no trucks were seen on the site until 2004.

A review conducted for this site found no files available through DEP's database search, nor were any signs of contamination found during the field review. Potential sources of contamination include leaks and discharges from the equipment stored and repaired on site. The storage of this equipment could contribute contaminants such as gasoline, diesel, motor oil or hydraulic oil. Based on the lack of available information and type of equipment potentially stored on the site, this facility is rated **Low** risk for potential contamination.

Table 4-1 Summary of Potentially Contaminated Sites Located along the SR 50 Corridor

Site ID	Site Name	Site Address	Approximate Distance ¹	Storage Tanks	Potential Contaminants	Government Database	Risk Rating
1	Brooksville Truck Repair	804 Sardis Street	50'	Unknown	Petroleum	N/A	Low
2	Speedway Service Station (F.K.A. Hess 09043)	1950 E. Jefferson Street	At ROW Line	Yes	Petroleum	RCRA-CESQG, FINDS, LUST, UST, DWM CONTAM	High
3	Everglades Equipment Group (F.K.A. Grubbs Construction/Liberty Auto Sales/Wildcat Trucking)	22265 Cortez Boulevard	At ROW Line	Yes	Petroleum	AST, LUST, UST, DWM CONTAM, RGA LUST, SPILLS	Medium
4	Five Star Refrigeration and Air Conditioning (F.K.A. Coca Cola Bottling Company)	23091 Cortez Boulevard	At ROW Line	Yes	Petroleum	LUST, UST, RGA LUST,	Medium
5	Keene Site Prep, Inc. (F.K.A. Consolidated Resource Recovery Waste Facility)	23163 Cortez Boulevard	At ROW Line	Yes	Petroleum	SWF/LF, AST	Low
6	W. Clyde Daniels Construction Inc.	23203 Cortez Boulevard	At ROW Line	Yes	Petroleum	LUST, UST, DWM CONTAM, CLEANUP SITES, RGA LUST	High
7	Cortez Professional Center (F.K.A. Econo Auto Painting)	24063 Cortez Boulevard	At ROW Line	Unknown	Unknown	N/A	Low
8	R&J Pressure Washing	7049 Lang Street	600'	Unknown	Unknown	N/A	No
9	Blanche's (F.K.A. Project Oil Co Inc)	25143 Cortez Boulevard	At ROW Line	Yes	Petroleum	LUST, LAST, AST, DWM CONTAM, CLEANUP SITES, RGA LUST	High
10	Le Bo Auto Brokers	25180 Cortez Boulevard	At ROW Line	Yes	Unknown	UST	Low
11	Countryside Estates WWTP	25199 Cortez Boulevard	400'	No	N/A	FINDS, NPDES	Low
12	Wagon Wheel Feed and Hardware Inc. (F.K.A. Packing House)	25410 Cortez Boulevard	At ROW Line	Yes	Petroleum	UST	Low
13	Speedway #6530 (F.K.A. Hess #09404)	26260 Cortez Boulevard	At ROW Line	Yes	Petroleum	RCRA-CESQG, LUST, UST	Medium
14	Pick Kwik Food Store #94	6244 Spring Lake Highway	At ROW Line	Yes	Petroleum	UST, LUST	Low

Site ID	Site Name	Site Address	Approximate Distance ¹	Storage Tanks	Potential Contaminants	Government Database	Risk Rating
15	Cortez Boulevard and Frisco Road	Cortez Boulevard and Frisco Road	At ROW Line	No	Batteries, hydraulic oil	SPILLS	Low
16	Brooksville Feed (F.K.A. Florida Crackers)	28343 Cortez Boulevard	At ROW Line	No	N/A	FINDS	No
17	98 Auto Recyclers Inc. (F.K.A. Mitrising Enterprises)	29119 Cortez Boulevard	At ROW Line	No	Unknown	SWF/LF	Low
18	Laso Wrecker Service, LLC	29114 Cortez Boulevard	At ROW Line	No	Unknown	Historical Auto Stations	Low
19	Laso Wrecker Service, LLC (F.K.A. Engine Exchange)	29116 Cortez Boulevard	At ROW Line	No	Unknown	Historical Auto Stations	Low
20	J&M Enterprises Inc.	28363 Cortez Boulevard	At ROW Line	No	Unknown	N/A	Low

¹Approximate distance from proposed right of way

Potential Contamination Site 2 – Speedway Service Station (F.K.A. Hess #09043)

DEP Facility ID: 8626277

The Speedway Service Station, formerly known as Hess Station #090403, is located at 1950 E. Jefferson Street. According to the Hernando County Property Appraiser’s website, the store building and canopy were first constructed in 1986. It has been a service station ever since. Based on the historical aerials, the parcel appears to be undeveloped prior to this.

The site previously had four 10,000-gallon petroleum underground storage tanks (USTs) containing unleaded gasoline and vehicular diesel fuel. The four USTs were in the south part of the site but were removed in 2005. Currently, a 20,000-gallon unleaded gasoline UST and a 20,000-gallon vehicular diesel fuel UST are in service in the north-central portion of the site.

A discharge was reported in 1987 and the site was accepted into the Early Detection Incentive program. Contamination assessment activities have been performed at the site. According to a 1993 Remedial Action Plan, a February 2006 Supplemental Site Assessment Report (SSAR), and a June 2007 Interim Deliverable Report, petroleum contaminated soil was identified in the vicinity of the former UST pit in the south part of the site. Soils reportedly are impacted over the depth interval of land surface to approximately 20 feet below ground surface (bgs). Petroleum contaminated groundwater was identified in monitor wells located in the vicinity of the former UST pit, the current dispenser island, and the diesel pump island. No funding for further assessment or remediation was appropriated for the site until August 2014. A remediation plan was proposed in July 2015. Only limited remediation work has been completed so far. Due to the known groundwater and soil contamination at this site, this facility is rated **High** risk for potential contamination.

Potential Contamination Site 3 – Everglades Equipment Group (F.K.A. Grubbs Construction Co./Liberty Auto Sales/Wildcat Trucking)

DEP Facility ID: 9400198 and 9101045

This facility is located at 22265 Cortez Boulevard. The facility consists of a large warehouse and separate garage facility. According to the Hernando County Property Appraiser’s website, the large warehouse was constructed in 1966 while the second garage facility was constructed in 1984. Prior to the 1977 aerials, the parcel appears to have been agricultural. The Everglades Equipment Group facility originally operated as Highlands Chrysler automobile dealership in the 1970s. Since the auto dealership closed in the 1980s the facility has been used for a variety of businesses including Liberty Auto Sales, Grubbs Construction Company, Wildcat Trucking and a Christian Thrift Shop.

According to a Tank Closure Report, a single 1,000-gallon UST was removed in November 1990. The UST was located on the east side of the building. Grubbs Construction and Wildcat trucking both utilized a second 8,000-gallon above-ground storage tank (AST) on the north side of the building. The AST was original installed by Chrysler and contained waste oil and has since been removed.

Contaminated soil was discovered during tank closure activities at the former UST area on the east side of the main building and the former waste oil AST area on the north side of the building. Contaminated soil was removed from the site. Groundwater below the vadose was not impacted. The Site Rehabilitation Completion Order was approved by DEP in December 2009 and a No Further Action granted.

In addition, a spill occurred when the property was operating as Wildcat Trucking in June 1997. No information was available regarding the spill. The EDR report indicates that the incident status is closed. The warehouse facility currently appears to be closed. The garage on site is currently operating as Precision Powerstroke LLC. Based on the records for this facility, past known contamination, and the current land use, it is rated as **Medium** risk for potential contamination.

Potential Contamination Site 4 – Five Star Refrigeration and Air Conditioning (F.K.A. Coca Cola Bottling Company)

DEP Facility ID: 8626420

The Five Star Refrigeration and Air Conditioning, formerly known as the Coca Cola Bottling Company, is located at 23091 Cortez Boulevard. The site consists of an office building with attached warehouse and detached garage. According to the Hernando County Property Appraiser's website, the warehouse building was constructed in 1981. Prior to this, the site appears to be undeveloped. A small building is present in the 1951 aerials adjacent to the parcel with what could be a residence or farmstead with a large open area that contains the site now containing the warehouse.

An abandoned fuel station was located on the central eastern boundary of the property where the facility held one 10,000-gallon UST of unleaded gasoline and one 10,000-gallon UST of vehicular diesel. Both USTs were removed in 1991. Contaminated soil was discovered during closure activities. In July 1991, 412 tons of contaminated soil was removed from the site; however, it was known that additional contaminated soil was present. An additional 250 cubic yards of soil was excavated in 1994. A No Further Action was given by DEP in January 1995. Based on the records for this facility and past known contamination it is rated as **Medium** risk for potential contamination.

Potential Contamination Site 5 – Keene Site Prep, Inc. (F.K.A. Consolidated Resource Recovery Waste Facility)

DEP Facility ID: 97796 and 9813976

The Keene Site Prep, Inc. is located at 23163 Cortez Boulevard. This facility is a yard and wood waste facility. The facility consists of an office building, numerous garages, parking area, and several large piles of wood and mulch. According to the Hernando County Property Appraiser's website, the warehouse building was constructed in 1992. Prior to this, the site appears to be undeveloped. A small building is present in the 1951 aerials adjacent to the parcel with what could be a residence or

farmstead with a large open area. The parcel containing the Keene Site Prep, Inc. was a small forested system until approximately 1992.

The facility has one 12,000-gallon AST of vehicular diesel. The AST was installed in 2014 and is currently in service. The facility was in compliance as of January 2015. No further information was available on OCULUS. Based on the available information and lack of obvious contamination, this facility is rated **Low** risk for potential contamination.

Potential Contamination Site 6 – W. Clyde Daniels Construction Inc.

DEP Facility ID: 8842203

The W. Clyde Daniels Construction Inc. facility is located at 23203 Cortez Boulevard. The facility consists of an office building with attached warehouse, numerous garages, and large parking and driveway area. According to the Hernando County Property Appraiser's website, the warehouse building was constructed in 1984. This is consistent with the historical aerials. Prior to 1984, the site appears undeveloped.

Two 4,000-gallon USTs containing diesel fuel were installed in November 1988. According to the Bureau of Petroleum Storage Systems Storage Tank / Contaminated Facility website, the facility also held three USTs of unknown size and contents. No information was available on these three unknown USTs in OCULUS.

A discharge was reported in January 1991 in which an unknown quantity of diesel fuel was released. The storage tanks were removed in July 1991. Soil and groundwater contamination was confirmed. A Remedial Action Plan was developed and approved in 2012 to address the contamination. Soil vapor extraction (SVE) was selected as the remedial technology to address vadose soil impacts at the site. Remediation is ongoing. During cleanup activities, contamination was discovered outside of the boundaries of the property and within FDOT ROW. Specifically, benzene was discovered all the way to the grassed median of SR 50. Remedial action for the extended boundary of contamination was proposed in March 2015 and is ongoing. Due to the known contamination at this site, including SR 50 ROW, and ongoing cleanup activities, this facility is rated **High** risk for potential contamination.

Potential Contamination Site 7 – Cortez Professional Center (F.K.A. Econo Auto Painting)

DEP Facility ID: N/A

The Cortez Professional Center is located at 24063 Cortez Boulevard. The Econo Auto Painting was located within the Cortez Professional Center which is comprised of two buildings which contain numerous offices. Currently, a medical marijuana facility and counseling office are located in the office space and no sign of the auto painting store was present.

According to the Hernando County Property Appraiser's website, the two buildings on site were constructed in 1982 and 1983, which is consistent with the historical aerials. Prior to 1984, the site appears undeveloped. A review of this property did not return any results in the EDR report and nothing was located in the DEP OCULUS database. No obvious signs of contamination were observed during the field review. Based on the sites appearance during field reviews, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 8 – R&J Pressure Washing

DEP Facility ID: N/A

The R&J Pressure Washing facility is located at 7049 Lang Street. Based on the Hernando County Property Appraiser site, this property is zoned as residential. The house was constructed in 1985. The road network for this neighborhood was first visible in the 1977 aerials, though it is difficult to determine if any houses were constructed at that time. Prior to 1977, the site was forested.

Currently the site contains one building that appears to be a residence. There were no signs indicating a business was located here. A review of this property did not return any results in the EDR report and nothing was located in the DEP OCULUS database. No obvious signs of contamination were observed during the field review. Based on the sites appearance during field reviews, this site is rated as **No** risk for potential contamination.

Potential Contamination Site 9 – Blanche's (F.K.A. Project Oil Company Inc).

DEP Facility ID: 8508832

Blanche's, formerly known as Project Oil Company Inc., is located at 25143 Cortez Boulevard. The site contains a restaurant, store and fuel pumping island. According to the Hernando County Property Appraiser's website, the building on site was constructed in 1960. In the 1951 aerial, the parcel contained a driveway to a cleared area that was surrounded by forests and wetlands. The cleared area and driveway are not present in the 1971 aerial. The building is not visible if it was constructed at this time.

The facility held five 5,800-gallon ASTs containing vehicular diesel and unleaded gasoline and one 3,600-gallon AST containing kerosene. A discharge notification form was filed in February 1992 based on an overfill. However, other site files indicate that a diesel tank ruptured and spilled fuel onto the ground that spread into the neighboring property to the north. Assessment activities were performed on the site from 2004 to 2010. The results of the assessment activities identified petroleum impacts in the groundwater and saturated soils in a perched aquifer. Contamination was discovered outside the property boundaries, including FDOT's SR 50 ROW. Initial remedial action included removal of 34 tons of contaminated soil; however, contamination still exists. In 2011, remediation wells were installed and remediation product was injected; however, post injection sampling revealed that contamination was still present. A Remedial Action Plan was developed in

June 2015. Remediation is ongoing. Due to the known contamination at this site, including SR 50 ROW, and ongoing cleanup activities, this facility is rated **High** risk for potential contamination.

Potential Contamination Site 10 – Le Bo Auto Brokers

DEP Facility ID: 8945217

The Le Bo Auto Brokers is located at 25180 Cortez Boulevard. According to the Hernando County Property Appraiser’s website, the building on site was constructed in 1962. The building is visible on the historical aerials beginning in 1977. Prior to this, the parcel appears forested and is adjacent to two wetlands. Currently the site contains what appears to be an office building with gravel parking area.

The site contained two USTs of unknown size and contents. Both were removed from the site in November 1988. No other information was available on the OCULUS database. No evidence of the USTs was found or obvious signs of contamination. The property was last sold in 2006 and is zoned commercial, though it does not appear to be in operation. Based on the lack of information regarding discharges and the site’s appearance during field reviews, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 11 – Countryside Estates Wastewater Treatment Plant

DEP Facility ID: N/A; FAC ID FLA012062

The Countryside Estates Wastewater Treatment Plant (WWTP) is located at 25199 Cortez Boulevard. The facility is on the FINDS and NPDES databases as being an active site for which effluent, reclaimed water or wastewater residual discharge into the environment and/or monitoring is taking place. The wastewater treatment plant serves the Countryside Estate community and consists of above ground cisterns. The plant sits approximately 400 feet off the existing SR 50 ROW. Based on the type of the facility and distance from the project, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 12 – Wagon Wheel Feed and Hardware Inc. (F.K.A. The Packing House)

DEP Facility ID: 9800288

The Wagon Wheel Feed and Hardware Inc., formerly known as The Packing House (also known as Facility House and McMullen Oil Products Inc.), is located at 25410 Cortez Boulevard. According to the Hernando County Property Appraiser’s website, the site contains a residence that was constructed in 1956 and a warehouse that was constructed in 1975. Prior to this, the site was undeveloped. The property has a warehouse and separate building that is presumably an office, though the Hernando County Property Appraiser classifies the office as a single-family residence.

The site held two 1,000-gallon USTs containing unleaded gasoline. A tank closure was performed in September 1995. Soil borings were taken to test the soils beneath the tanks location for contamination. No significant soil contamination was detected. After a Site Rehabilitation Completion Order was filed, the DEP granted a No Further Action on the site in March 1997. Based on the information available on the site and the site's appearance during field reviews, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 13 – Speedway #6530 (F.K.A. Hess #09404)

DEP Facility ID: 9045987

The Speedway #6530, formerly known as Hess station #09404, is located at 26260 Cortez Boulevard. According to the Hernando County Property Appraiser's website, the store on site was constructed in 1990. Prior to that, the parcel was undeveloped and consisted of forested habitat. The facility is now a Speedway gas station. Gasoline dispenser islands are present in the north and central portion of the property, beneath a canopy. Diesel dispenser islands are present in the south central portion of the property, beneath a canopy.

The facility held three 10,000-gallon USTs containing unleaded gasoline and one 12,000-gallon UST containing vehicular diesel that were removed from the site. The facility now holds three 20,000-gallon USTs of unleaded gasoline and vehicular diesel. In March 1991 a discharge reporting form (DRF) was filed in response to high vapor readings in compliance wells surrounding the gasoline USTs. A second DRF was filed in November 1993 in response to high vapor readings in compliance wells surrounding the diesel UST. A third DRF was filed in December 1995 when contaminated soils were discovered during the replacement of the concrete beneath the diesel fuel pump. A fourth DRF was filed in August 1997 in response to a fuel spill that occurred during refilling of the diesel UST.

Assessment activities were performed on the site between 1999 and 2001 to determine the extent of contamination. A Remedial Action Plan approved in March 2002 to excavate contaminated soil during tank closure/replacement activities. Petroleum impacted soils were removed during the tank removal and replacement event in May 2006. In April 2007 the Site Rehabilitation Completion Order was approved and the facility was given a No Further Action from the DEP. Based on the records for this facility and past known contamination, it is rated as **Medium** risk for potential contamination.

Potential Contamination Site 14 – Pick Kwik Food Store #94

DEP Facility ID: 8520261

The EDR report lists the Pick Kwik Food Store #94 as being located at 6264 Spring Lake Highway. According to the Hernando County Property Appraiser's website, this address does not exist. The Papa Joe's Italian restaurant is located at 6244 Spring Lake Highway. Possibly the EDR report had the incorrect address and Pick Kwik Food Store #94 is now Papa Joe's Italian Restaurant. This parcel is irregular shaped and includes access on SR 50 and Ogburn Street east of the Remington Outpost.

The parcel includes the restaurant and at least five residences. According to the Hernando County Property Appraiser's website, the restaurant was constructed in 1960. The single family residences were constructed in 1967, 1971, 1975, and 1981. Prior to that, the parcel was undeveloped and consisted of forested habitat.

The Remington Outpost was constructed in 1972. It appears this facility has not changed since it was first constructed. Thus, it does not appear to have been a gas station and is unlikely this was the location of the Pick Kwik Food Store #94. No monitoring wells or other evidence of a prior gas station were observed at either the Italian restaurant or the Remington Outpost.

The Pick Kwik Food Store #94 site held three 4,000-gallon USTs containing unleaded gasoline and one 10,000-gallon UST containing leaded gasoline. In December 1986, six monitoring wells were installed on site. Monthly monitoring reports indicate that in almost all instances the wells were dry, and did not indicate the presence of free product, appearance of oil or exhibit petroleum odor. However, approximately one week after installation petroleum odors were detected at two of the wells. A Contamination Assessment Report was completed in February 1990 in which it was determined that there was no significant contamination to the soil. In April 1990 the site was given a designation of No Further Action. All tanks were removed from the site by February 1992. Based on the information available on the site and the site's appearance during field reviews, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 15 – Cortez Boulevard and Frisco Road

DEP Facility ID: N/A

According the EDR report there was a spill on March 3, 2008, at the intersection of Cortez Boulevard and Frisco Road. The spill included 700 pounds of batteries and 30 gallons of hydraulic oil. No further information was available regarding this spill. However, it appears an environmental services contractor was hired indicating the spill may have been cleaned up. Based on the information available on the site and the site's appearance during field reviews, this site is rated as **Low** risk for potential contamination.

Potential Contamination Site 16 – Brooksville Feed (F.K.A. Florida Crackers)

DEP Facility ID: N/A

The Brooksville Feed store, formerly known as Florida Crackers Farm and Pet Store facility was formerly located at 28343 Cortez Boulevard. The building is currently vacant. According to the Hernando County Property Appraiser's website, the warehouse closest to SR 50 was constructed in 1987. It appears the second warehouse was constructed between 1999 and 2004. Prior to 1987, the parcel was undeveloped, though the 1951 aerial indicates it may have been used for agriculture.

No information was available on the OCULUS database about the site. No obvious signs of contamination were observed during the field review. Based on the lack of information regarding

discharges and the site's appearance during field reviews, this site is rated as **No** risk for potential contamination.

Potential Contamination Site 17 – 98 Auto Recyclers Inc. (F.K.A. Mitrising Enterprises)

DEP Facility ID: 96277

The 98 Auto Recyclers Inc. facility, formerly known as Mitrising Enterprises, is located at 29119 Cortez Boulevard. The facility is an auto salvage yard and includes a large parking area for vehicles and vehicle parts as well as an office with attached garage and warehouse. According to the Hernando County Property Appraiser's website, the building was constructed in 1963, although it was classified as a single-family residence. Based on the historical aerials, the site was undeveloped in 1951. Beginning in 1977 a half circular driveway is visible with a structure. It is hard to determine if the structure is a residence in the 1977 and 1984 aerials or a structure more similar to what is present today.

A review conducted for this site found no files available through DEP's database search, but a field review of this property shows that there are potential sources of contamination located here. During field reviews, a large number of vehicles and vehicle parts were observed, though no obvious signs of contamination were observed. Potential sources of contamination include leaks and discharges from the equipment stored and repaired on site. The storage of this equipment could contribute contaminants such as gasoline, diesel, motor oil or hydraulic oil. Due to the information available and appearance during the site review the facility is rated as **Low** risk for potential contamination.

Potential Contamination Site 18 – Laso Wrecker Service, LLC

DEP Facility ID: N/A

The Laso Wrecker Services, LLC is located at 29114 Cortez Boulevard. The facility is a used auto sales facility, wrecker service, and U-Haul truck renter facility. The site contains a large parking area for various vehicles and an office building. Connected to the office building is a garage where the facility may also provide auto body repair services. According to the Hernando County Property Appraiser's website, the store was constructed in 1980. The building is difficult to see in the 1984 aerial, though may be present. The building appears as it does today in the 1995 aerial.

The facility is listed in the EDR report as a historical auto station. A review conducted for this site found no files available through DEP's database search, but a field review of this property shows that there are potential sources of contamination here. During field reviews, several vehicles and vehicle parts were observed on site, though no obvious signs of contamination were observed. Potential sources of contamination include leaks and discharges from this equipment. The storage of this equipment could contribute contaminants such as gasoline, diesel, motor oil or hydraulic oil.

Due to the information available and appearance during the site review, the facility is rated as **Low** risk for potential contamination.

Potential Contamination Site 19 – Laso Wrecker Service, LLC (F.K.A. Engine Exchange)

DEP Facility ID: N/A

The EDR report lists the previous facility (Engine Exchange) as being located at 29116 Cortez Boulevard as well as 26988 Seidel Street. Neither address exists according to the Hernando County Property Appraiser’s website. Single family residences are located on Seidel Street. If the Engine Exchange facility was located here, it was likely operated out of a residence. Currently, the facility adjacent to the Laso Wrecker Service, LLC (site 18) on the east side is listed as 29136 Cortez Boulevard, which is the closest matching address to that provided in the EDR report.

The facility is listed in the EDR report as a historical auto station. Based on research, Engine Exchange was an auto repair facility. Currently, the site consists of an office building and parking lot, with a Laso Wrecker Service, LLC sign on the fence bordering the property and next to the driveway leading to the office building. There are no garages or similar facilities that would indicate it was an automotive repair facility. According to the Hernando County Property Appraiser’s website, the building on site was constructed in 1969. However, based on the field review, the building on site appears to be newer than this. A driveway and building are visible in the 1977 aerial, though it is not possible to tell the nature of the building. The business at this address is now closed and the building is for sale. Engine Exchange was an auto repair facility, though the site does not match this description. Due to the information available and appearance during the site review the facility is rated as **Low** risk for potential contamination.

Potential Contamination Site 20 – J&M Enterprizes Inc.

DEP Facility ID: N/A

The J&M Enterprizes Inc. is located at 28363 Cortez Boulevard. The facility consists of an auto body shop and automobile storage facility. According to the Hernando County Property Appraiser’s website, the service garage was constructed in 1983. The automobile storage facility warehouses were constructed in 1996. Prior to 1983, the parcel was undeveloped.

No information was available on the OCULUS database about the site. No obvious signs of contamination were observed during the field review. Based on the facility type and the site’s appearance during field reviews, this site is rated as **Low** risk for potential contamination.

4.2 POTENTIAL IMPACTS TO SMF AND FPC SITES

Preferred SMF and FPC sites have been screened for potential contamination involvement. This section provides a determination for potential contamination involvement in each SMF or FPC site based on the recommended build alternative. The potential risk for each pond site was determined by a number of factors including the proximity to potential contamination sites, the risk rating for each contamination site, and field review observations.

During the April 2019 field review, preferred pond sites were evaluated for potential contamination involvement. Reviews were conducted from FDOT right-of-way and in-situ on property where feasible. All preferred pond sites showed no indications for contamination involvement on-site, however; several pond sites are adjacent or within the vicinity of contamination sites and therefore have the risk for potential contamination involvement. Risk ratings for each pond site are shown in **Table 4-2**.

Based on a desktop review of the potential contamination sites identified in this report and the available information on the properties evaluated, it appears 10 out of 22 preferred pond sites may have the potential for contamination involvement; however, only one site is rated as Medium risk (SMF 6-B). SMF-6B is 1.7 acres and located on the corner of Tall Oaks Drive and Cortez Boulevard (SR 50). It appears the recommended pond site is within 500 feet of Potential Contamination Site 9 - Blanche's (F.K.A. Project Oil Company Inc) (**High** risk) and within 300 feet of Potential Contamination Site 10 - Le Bo Auto Brokers (**Low** risk) and Potential Contamination Site 11 - Countryside Estates Wastewater Treatment Plant (**Low** risk). Contaminants from the ruptured diesel tank at Blanche's (site 9) have been found in the perched aquifer beneath the site, adjacent property to the north, and Cortez Boulevard (FDOT ROW) to the south. Due to the known contamination and on-going clean-up at Blanche's, and the close proximity to three potential contamination sites, preferred SMF-6B is rated as **Medium** risk for potential contamination.

There are 12 ponds with No potential, 9 ponds with Low potential, 1 pond with Medium potential, and no ponds with High potential for contamination involvement. This information is shown below in Table 4-2. Information regarding potential contamination site proximity to the preferred SMF and FPC sites is also included in this table.

Table 4-2 Preferred Pond Site Risk Ratings

Preferred SMF or FPC	Risk Rating	Potential Contamination Sites within 1,000 feet
SMF-1C	Low	Site 3 – Medium risk
FPC-1C	Low	Site 3 – Medium risk
SMF-2A	No	--
FPC-2A	No	--
SMF-3A	No	--
FPC-3-4A	No	--
SMF-4C	No	--
SMF-5B	No	--
FPC-5B	No	--
SMF-6B	Medium	Site 9 – High risk Site 10 – Low risk Site 11 – Low risk
FPC-6-9A	No	--
SMF-7&8C	No	--
SMF-9A	Low	Site 13 – Medium Site 14 – Low
SMF-10A	Low	Site 13 – Medium Site 14 – Low
FPC-10A	Low	Site 13 – Medium Site 14 – Low
SMF-11B	No	--
FPC-11B	Low	Site 15 – Low
SMF-12A	Low	Site 15 – Low
FPC-12B	No	--
SMF-13B	Low	Site 16 – No Site 20 – Low
FPC-13B	Low	Site 16 – No Site 20 – Low
SMF-14A/FPC-14A	No	--

SECTION 5 SUMMARY AND CONCLUSIONS

All corridor properties within a quarter mile were evaluated to the extent necessary for potential contamination sources within or near the project area (**Appendix E**). Twenty (20) sites were considered to have potential for contamination. Three (3) sites were rated as High risk, three (3) sites were rated as Medium risk, and twelve (12) sites were rated as Low risk for potential contamination. All of the sites rated as High or Medium risk for potential contamination are or have been in state or federal cleanup programs. Two sites, W. Clyde Daniels Construction Inc. (site 6) and Blanche's (site 9) have known contamination within FDOT ROW. The remaining sites were rated as having No risk based on review of available data, historical aerials and the field review of the sites. A list of these locations is included in **Table 4-1**. Two sites, W. Clyde Daniels Construction Inc. (site 6) and Blanche's (site 9) have known contamination within FDOT ROW. Four (4) solid waste sites were also identified within one mile of the corridor. Two of the solid waste sites were not discussed in this report as contamination from these sites is not likely due to their distance from the project corridor. The remaining two facilities (Consolidated Resource Recovery and W. Clyde Daniels Construction Inc.) were rated Low and High for potential contamination, respectively. One preferred stormwater management facility, SMF-6B, is rated as Medium potential for contamination due to the close proximity to Blanche's (site 9), Le Bo Auto Brokers (site 10), and Countryside Estates Wastewater Treatment Plant (site 11).

Based on the conclusions of the study and the risk rankings noted above, the following recommendations are made for this project:

1. For the sites rated "No" for potential contamination, no further action is recommended. These sites have been evaluated and determined not to have any potential environmental risk to the study area at this time.
2. For sites rated "Low" for potential contamination, no further action is required at this time. These sites/facilities have potential to impact the study area, but based on select variables have been determined to have low risk to the corridor at this time. Variables that may change the risk rating include a facility's non-compliance to environmental regulations, new discharges to the soil or groundwater, and modifications to current permits. Should any of these variables change, additional assessment of the facilities should be conducted.
3. For those locations with a risk rating of "Medium" or "High", including preferred SMF and/or FPC sites, a Level II field screening should be conducted. These sites have been determined to have potential contaminants, which may impact the SR 50 corridor. A soil and groundwater sampling plan should be developed for each site. The sampling plan should provide sufficient detail as to the number of soil and groundwater samples to be obtained and the specific analytical test to be performed. A site location sketch for each facility showing all proposed boring locations and groundwater monitoring wells should be prepared.

4. Additional information may become available or site-specific conditions may change from the time this report was prepared and should be considered prior to acquiring ROW and/or proceeding with roadway construction.

ETDM Programming Screen Summary Report Excerpts

pollutant concentrations recorded at the nearest air quality monitors, an evaluation of anticipated emissions, and air quality trend analyses. It is also recommended that environmental reviews of the project include hot spot analyses at the points in time and places where congestion are expected to be greatest or in areas of sensitive receptors. Air quality modeling using an approved software program could be used as a means to determine whether any conformity issues or violations of air quality standards are anticipated within the project area and/or county. The number and types of vehicles traveling along this roadway should be considered and evaluated with regards to air quality conformity and mobile source air toxics. Current and proposed air quality requirements and standards should be used in modeling software programs.

As population growth and vehicle volumes increase, there is the potential to have air quality conformity and non-attainment issues in the future. FDOT, MPOs, municipalities, and regional planning agencies should conduct air quality modeling as traffic forecasts increase.

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

The following organization(s) were expected to but did not submit a review of the Air Quality issue for this alternative: Federal Highway Administration

Contamination

Project Effects

Coordinator Summary Degree of Effect: 2 *Minimal* assigned 11/01/2013 by FDOT District 7

Comments:

USEPA DOE: Minimal

FDEP DOE: Minimal

SWFWMD DOE: Minimal

FDOT Recommended DOE: **Minimal**

The Florida Department of Transportation (FDOT) has evaluated comments from the US Environmental Protection Agency (USEPA), Florida Department of Environmental Protection (FDEP), and the Southwest Florida Water Management District (SWFWMD) and recommends a Degree of Effect of Minimal.

Contamination resources that the EST Geographic Information Systems (GIS) analysis identified are:

100-ft. Project Buffer Area

Super Act Wells (1)

Biomedical Waste (1)

Onsite Sewage (16)

USEPA Resource Conservation and Recovery Act (RCA) Regulated Facility (2)

Additional Resources within the 200-ft. Project Buffer Area

Super Act Risk Sources (2)

Super Act Wells (6)

Petroleum Contamination Monitoring Sites (9)

Hazardous Waste Facilities (1)

Onsite Sewage (32)

Solid Waste Facilities (2)

Additional Resources within the 500-ft. Project Buffer Area

Petroleum Contamination Monitoring Sites (4)

Super Act Risk Sources (3)

Super Act Wells (21)

Limited Use Drinking Water Wells (6)

USEPA RCA Regulated Facility (1)

Onsite Sewage (62)

Solid Waste Facilities (1)

The Surficial Aquifer and Recharge Areas of the Floridan Aquifer showing a Discharge/Less than 1 as both 100.0% within the 100-foot project buffer area. Additional contamination sites within the .5-mi. and 1-mi. project buffer area and are described in the EST GIS analysis.

The USEPA and FDEP recommended that a Contamination Screening Evaluation Report (CSER) be prepared.

The SWFWMD commented that from the SWFWMD's GIS and the FDOT's EST GIS, the project area is characterized by the single Floridan aquifer system. The pollution potential of the Floridan Aquifer is high as indicated by DRASTIC weighted indexes between 142 and 186 for the entire length of this proposed alignment. The regional DRASTIC scores are consistent with the regional FAVA vulnerability response of "More Vulnerable". If encountered and disturbed during construction along the segment route, any contaminated site could result in surface and / or groundwater water pollution, particularly at the location of the seven (7) Super Act Wells and the Two (2) Super Act Risk Sources. The SWFWMD also recommended several actions that should be considered to minimize groundwater and surface water pollution potential.

FDOT will prepare a CSER for this project. Any source identified will be assessed to determine the need for remediation during construction. Impacts to contaminated sites will be avoided or minimized to the best extent practicable.

No comments were received from the Federal Highway Administration (FHWA).

Degree of Effect: 2 *Minimal* assigned 08/23/2013 by Madolyn Dominy, US Environmental Protection Agency

Coordination Document: To Be Determined: Further Coordination Required

Direct Effects

Identified Resources and Level of Importance:

Resources: Soils, groundwater, surface water which have the potential to be negatively affected by contaminated site features such as underground petroleum storage tanks, industrial/commercial facilities with onsite storage of hazardous materials, hazardous waste facilities, USEPA RCRA facilities, etc.

Level of Importance: These resources are of a high level of importance in the State of Florida. A minimal degree of effect is being assigned to the contaminated sites issue for the proposed project (ETDM#13980, SR 50 from Brooksville Bypass to I-75).

Comments on Effects to Resources:

EPA reviewed the contaminated sites GIS analysis data for buffer distances of 100, 200, and 500 feet. There are contaminated sites features identified in the online EST GIS analysis data search. These include (for 200-foot buffer distance): 1 Hazardous Waste Facility, 9 Petroleum Contamination Monitoring Sites, 2 Solid Waste Facilities, 6 Storage Tank Contamination Monitoring Sites, and 2 USEPA RCRA Facilities.

EPA is assigning a minimal degree of effect for this issue but recommends that a Contamination Screening Evaluation be conducted during the environmental review (PD&E) phase of the project. This type of study should include a survey of the area to confirm the location of current listed contaminated site features, along with other contaminated site features which may have been previously located in the area. Documentation of environmental impacts associated with contaminated sites or contaminated facilities should be included in the report.

If any contaminated sites features (e.g., petroleum storage tanks) are to be impacted or removed during the construction phase of the project, sampling and analysis should be conducted to determine if pollutants are present above regulatory levels. If high levels of pollutants are identified, remediation may be required prior to commencement of construction of the project. Any anticipated remedial, removal, or cleanup activities should be discussed and outlined in the Contamination Evaluation Screening report.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

CLC Commitments and Recommendations:

Indirect Effects

Identified Resources and Level of Importance:

Comments on Effects to Resources:

Recommended Avoidance, Minimization, and Mitigation Opportunities:

Degree of Effect: 2 *Minimal* assigned 08/22/2013 by Monte Ritter, Southwest Florida Water Management District

Coordination Document: To Be Determined: Further Coordination Required

Coordination Document Comments:

The SWFWMD has assigned a Degree of Effect (DOE) based on the potential need for increased coordination or effort associated with the SWFWMD's proprietary or regulatory interests and obligations. For this project, a DOE of minimal was assigned to these issues due to the present belief that little or no adverse impacts from Contaminated Sites are expected. Future permitting should involve routine interaction with the SWFWMD's regulatory staff.

Direct Effects

Identified Resources and Level of Importance:

Information regarding proposed off-site stormwater management facilities will not be available until after the subsequent PD&E and design phases of this project. Therefore, the SWFWMD utilized the FDOT's Environmental Screening Tool - EST (supplemented with information from the SWFWMD's Geographic Information System - GIS) for identifying potential contaminated sites that may affect subsequent Environmental Resource Permits (ERPs) for the FDOT. The facilities of concern within 200 feet of this SR 50 widening project include (but are not limited to) the following:

Hazardous Waste Facilities: One (1) facility.

Petroleum Contamination Monitoring Sites: Nine (9) sites.

Storage Tank Contamination Monitoring: Six (6) facilities.

Super Act Risk Sources: Two (2) sources.

Super Act Wells: Seven (7) wells.

Solid Waste Facilities: Two (2) facilities.

Sensitive Karst Areas: One (1) area (details noted below).

Subsidence Incident Reports: One (1) report (details noted below).

Detailed information regarding known contaminated sites can be obtained from the appropriate GIS themes / layers in the EST. In view of the current / past land uses in the project area, there may be other (unknown) contaminated sites.

Contamination sites (or potential contamination sites) of particular interest to the SWFWMD include the following:

- The two (2) Super Act Risk Sources
- The seven (7) Super Act Wells
- Other current / past commercial, industrial and agricultural activities near the proposed project.

Both the SWFWMD's GIS and the FDOT's EST clearly show a Sensitive Karst Area (SKA) for the first 800 feet of the project, and from approximately 2200 feet east of Griffin Road to approximately 800 feet east of Spring Lake Highway. (reference: the FDOT's EST Contamination Map and > *Geology > SWFWMD Sensitive Karst Areas* layer).

From the SWFWMD's GIS, one (1) reported sinkhole was identified within the 200 foot buffer of the SR 50 widening project as follows:

- Old Sink ID #08-001, Sink date 01/01/1968, Eastbound SR 50 shoulder 550 feet east of Spring Lake Highway, Latitude 28-31-23, Longitude 82-18-05

One (1) additional Subsidence Incident Report was identified on the FDOT's EST within the 200 foot buffer. Within the one (1) mile buffer, the EST reported a total of four (4) Subsidence Incident Reports (reference: The FDOT's EST Contamination Map and > *Geology > Subsidence Incident Reports* layer).

From the SWFWMD's GIS and the FDOT's EST, the project area is characterized by the single Floridan aquifer system. The pollution potential of the Floridan Aquifer is high as indicated by DRASTIC weighted indexes between 142 and 186 for the entire length of this proposed alignment. The regional DRASTIC scores are consistent with the regional FAVA vulnerability response of More Vulnerable.

Comments on Effects to Resources:

If encountered and disturbed during construction along the segment route, any contaminated site could result in surface and / or groundwater water pollution, particularly at the location of the seven (7) Super Act Wells and the Two (2) Super Act Risk Sources.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

To minimize groundwater and surface water pollution potential, the following actions should be considered by the FDOT:

- Conduct an Environmental Audit at the appropriate level to identify specific facilities of interest and to develop a plan for their proper removal or abandonment;
- Coordinate with FDEP & USEPA, and prepare an appropriate Contamination Assessment Report;
- Avoid known contaminated sites where possible in the selection of the project alignment. If discovered during the recommended soils investigation, contamination should be remediated properly so as to eliminate the potential for ground water contamination;
- If applicable, avoid / minimize all construction activity in proximity to known sinkholes along or near the project s alignment;
- Confirm the presence or absence of existing potable supply wells, both public and domestic (refer to the GIS well information below), and identify precisely all potential sources of contamination within the path of construction or in proximity of the proposed surface water management systems;
- Thoroughly evaluate potential stormwater treatment pond sites for the presence of contamination and eliminate contaminated sites as potential pond sites;
- Design and construct stormwater management facilities to avoid breaching the upper confining unit;
- Temporary drainage & erosion control through areas of potential contamination may be important considerations for the FDOT and their construction contractor.

Contamination sources such as existing fuel storage tanks, fuel pumps, and septic tanks shall be removed or abandoned properly. In addition, existing wells in the path of construction shall be properly plugged and abandoned by a licensed well contractor Reference: Rule 40D-4.381(1)(i), Florida Administrative Code, available at <http://www.swfwmd.state.fl.us/permits/rules/>.

Water use and well construction information is now available in the EST under Contamination > Permits > SWFWMD Well Construction Permits. Useful information includes the permit number, name of the permittee, well casing diameter(s), street address of the well(s), well driller name and the approximate location(s) by latitude / longitude. As of July, 2013, the EST indicated eighty seven (87) SWFWMD well construction permits had been issued within 200 feet of the SR 50 widening project. Similar information can be obtained from the SWFWMD s Permits Map Viewer, Well Construction Permit Search and Water Use Permit Search web sites as follows:

<http://www8.swfwmd.state.fl.us/ExternalPermitting/>
<http://www18.swfwmd.state.fl.us/search/search/wcpsimple.aspx>
<http://www18.swfwmd.state.fl.us/search/search/searchwupsimple.aspx>

CLC Commitments and Recommendations:**Indirect Effects****Identified Resources and Level of Importance:****Comments on Effects to Resources:****Recommended Avoidance, Minimization, and Mitigation Opportunities:**

Degree of Effect: 2 *Minimal* assigned 08/21/2013 by Lauren P. Milligan, FL Department of Environmental Protection

Coordination Document: To Be Determined: Further Coordination Required

Direct Effects**Identified Resources and Level of Importance:**

GIS data indicates that there is 1 hazardous wastes facility, 13 petroleum contamination monitoring sites, 12 storage tank contamination monitoring sites, 3 solid waste facilities and 3 RCRA regulated facilities within the 500-ft. project buffer zone.

Comments on Effects to Resources:

A Contamination Screening Evaluation (similar to Phase I and Phase II Audits) may need to be conducted along the project right-of-way, considering the proximity to potential petroleum and hazardous material handling facilities. The Contamination Screening Evaluation should outline specific procedures that would be followed by the applicant in the event drums, wastes, tanks or potentially contaminated soils are encountered during construction. Special attention should be made in the screening evaluation to historical land uses (such as solid waste disposal) that may have an affect on the proposed project, including stormwater retention and treatment areas.

Recommended Avoidance, Minimization, and Mitigation Opportunities:

CLC Commitments and Recommendations:

Project Effects

Coordinator Summary Degree of Effect: 2 Minimal assigned 11/01/2013 by FDOT District 7

Comments:

SWFWMD DOE: Minimal

FDOT Recommended DOE: **Minimal**

The Florida Department of Transportation (FDOT) has evaluated comments from the Southwest Florida Water Management District (SWFWMD) and recommends a Degree of Effect (DOE) of Minimal.

The EST Geographic Information Systems (GIS) analysis identified two Federal Aviation Administration Obstructions (towers) and two wireless antenna structures within the 200-foot buffer and railroad siding within the 500-foot buffer distance.

Contaminated sites are described in the Contaminated Sites DOE.

The SWFWMD commented that construction activities related to the project and associated surface water management facilities have the potential to damage the SWFWMD's data collection stations or to impair their collection functions. Of heightened concern are the benchmarks listed in SWFWMD's comment in the EST. Communication with the SWFWMD's Data Collection Bureau (Brooksville) during the design phase can greatly reduce the potential for impacts to these structures and monitoring wells.

The FDOT will take all measures to avoid and/or minimize harm to any resources.

No comments were received from the Federal Highway Administration (FHWA).

Degree of Effect: 2 Minimal assigned 08/22/2013 by Monte Ritter, Southwest Florida Water Management District

Coordination Document: Permit Required

Coordination Document Comments:

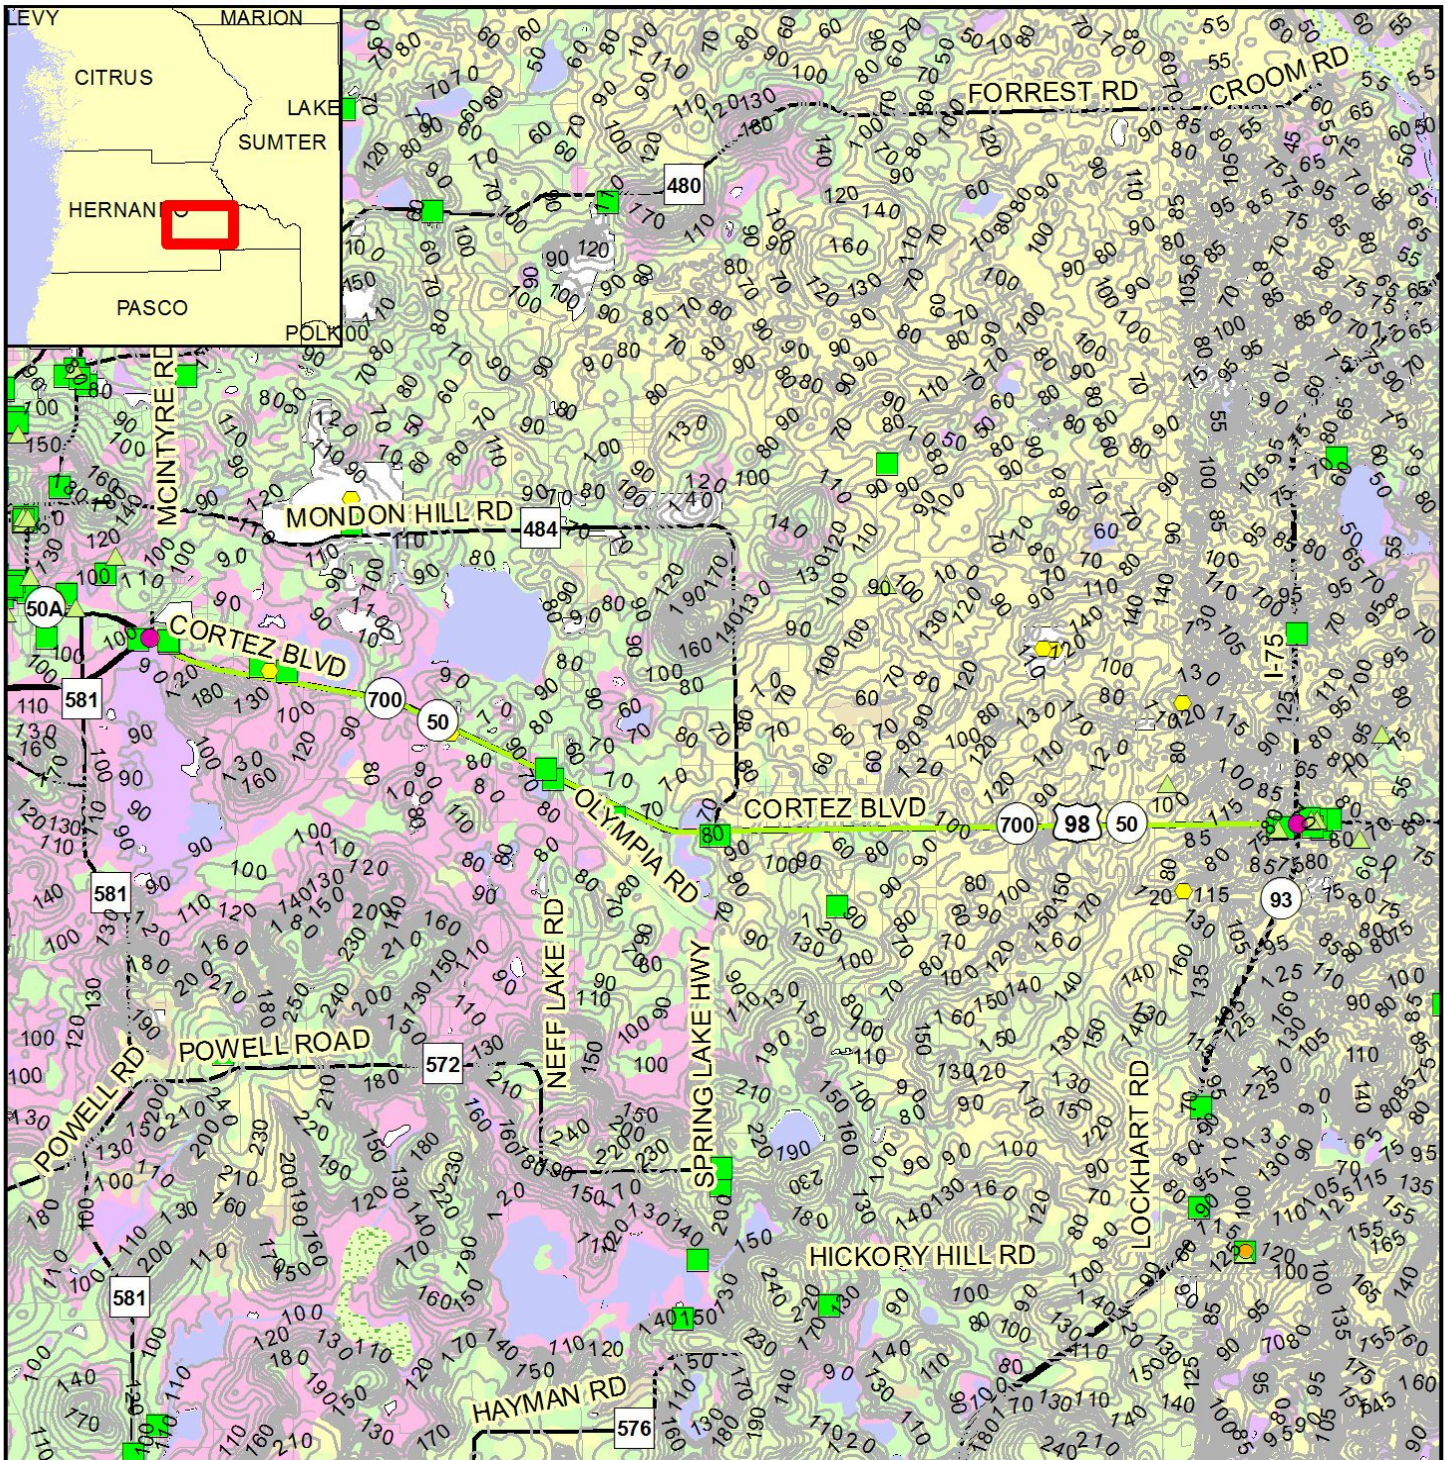

The SWFWMD has assigned a Degree of Effect (DOE) based on the potential need for increased coordination or effort associated with the SWFWMD's proprietary or regulatory interests and obligations. A DOE of minimal was assigned to these issues due to the present belief that little or no adverse impacts to infrastructure (owned or controlled by the SWFWMD) are expected.

The SWFWMD requests that FDOT avoid disturbing data collection facilities or adjacent survey benchmarks. Coordination with the District's Hydrologic Data and Survey Sections in Brooksville will be helpful in protecting these infrastructure components.

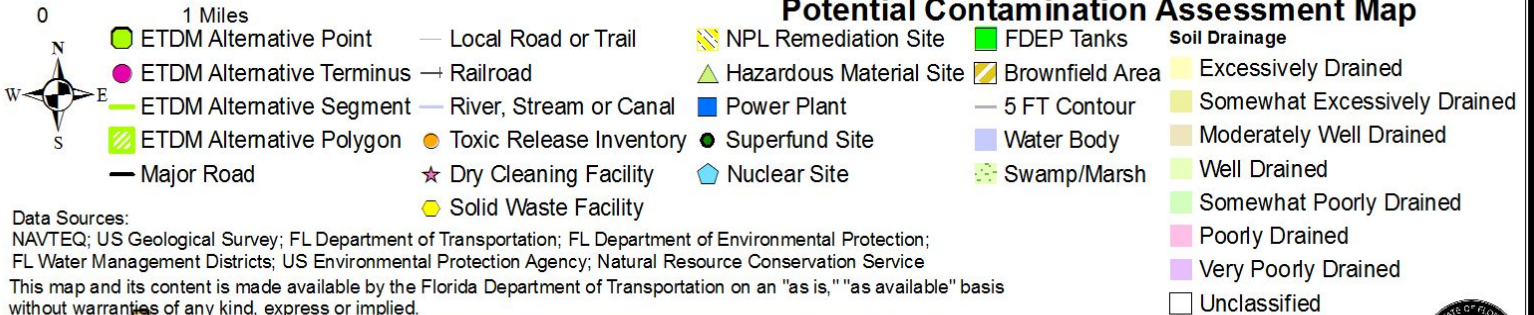

For ETDM #13980, the District has assigned a pre-application file (**PA# 400322**) for the purpose of tracking its participation in the ETDM review of this project. File **PA# 400322** is maintained at the Brooksville Service Office of the SWFWMD. Please refer to this

EXECUTIVE SUMMARY

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 RCRA-CESQG sites within the searched area.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 01/18/2015 has revealed that there are 4 FINDS sites within the searched area.

FLORIDA CRACKERS	28343 CORTEZ BLVD	16	50

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/16/2014 has revealed that there is 1

EXECUTIVE SUMMARY

DWM CONTAM: A listing of active or known sites. The listing includes sites that need cleanup but are not actively being working on because the agency currently does not have funding (primarily petroleum and drycleaning).

A review of the DWM CONTAM list, as provided by EDR, and dated 03/31/2015 has revealed that there are 5 DWM CONTAM sites within the searched area.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 8 EDR US Hist Auto Stat sites within the searched area.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within the searched area.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/26/2015	Source: EPA

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/07/2015
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/07/2015
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/18/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/18/2014	Telephone: 202-564-6023
Date Made Active in Reports: 04/24/2014	Last EDR Contact: 04/27/2015
Number of Days to Update: 37	Next Scheduled EDR Contact: 08/10/2015
	Data Release Frequency: Varies

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/10/2015	Source: EPA
Date Data Arrived at EDR: 03/31/2015	Telephone: 800-424-9346
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 72	Next Scheduled EDR Contact: 10/12/2015
	Data Release Frequency: Quarterly

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015
Date Data Arrived at EDR: 03/31/2015

Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/10/2015
Date Data Arrived at EDR: 03/31/2015
Date Made Active in Reports: 06/11/2015

Next Scheduled EDR Contact: 10/12/2015
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015
Date Data Arrived at EDR: 03/31/2015
Date Made Active in Reports: 06/11/2015

Data Release Frequency: Varies

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/16/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/17/2015	Telephone: 703-603-0695
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/01/2015
Number of Days to Update: 77	Next Scheduled EDR Contact: 09/14/2015
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/16/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/17/2015	Telephone: 703-603-0695
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/01/2015
Number of Days to Update: 77	Next Scheduled EDR Contact: 09/14/2015
	Data Release Frequency: Varies

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/30/2015	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 03/31/2015	Telephone: 202-267-2180
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 63	Next Scheduled EDR Contact: 10/12/2015
	Data Release Frequency: Annually

HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 03/30/2015	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 03/31/2015	Telephone: 202-366-4555
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 72	Next Scheduled EDR Contact: 10/12/2015
	Data Release Frequency: Annually

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 07/31/2012	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 08/07/2012	Telephone: 202-366-4595
Date Made Active in Reports: 09/18/2012	Last EDR Contact: 05/05/2015
Number of Days to Update: 42	Next Scheduled EDR Contact: 08/17/2015
	Data Release Frequency: Varies

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: Quarterly

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/23/2015

Next Scheduled EDR Contact: 10/12/2015
Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 11/25/2013	Source: EPA
Date Data Arrived at EDR: 12/12/2013	Telephone: 703-416-0223
Date Made Active in Reports: 02/24/2014	Last EDR Contact: 06/12/2015
Number of Days to Update: 74	Next Scheduled EDR Contact: 09/21/2015
	Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 09/14/2010	Source: Department of Energy
Date Data Arrived at EDR: 10/07/2011	Telephone: 505-845-0011

	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009	Source: EPA

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Marine Facilities Operating Permit

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

Miami River Enforcement

The Miami River Enforcement database files were created for facilities and in some instances vessels that were inspected by a workgroup within the Department that was identified as the Miami River Enforcement Group. The files do not all necessarily reflect enforcement cases and some were created for locations that were permitted by other Sections within the Department.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers for Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Department of Children & Families

Source: Provider Information

Telephone: 850-488-4900

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Department of Environmental Protection

Telephone: 850-245-8238

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
