1.0 INTRODUCTION

This Traffic Analysis Report has been prepared as part of the Project Development and Environment (PD&E) Study for the proposed widening of State Road 52 (SR 52) from a two-lane rural section to a six-lane urban section. The project begins east of the Interstate 75 (I-75) interchange ramps and extends approximately 1.9 miles to the east, to the east of Emmaus Cemetery Road. The location of the project is provided in Figure 1.

The existing roadway is a two-lane undivided section as shown in Figure 2. The proposed geometry of the interim four-lane divided roadway is provided in Figure 3, while the geometry of the ultimate six-lane divided roadway is provided in Figure 4.

There are no traffic signals within the project corridor. The posted speed limit is 50 mph from I-75 through the project corridor. Pasco County is experiencing rapid suburban development and growth is expected to continue as the existing vacant land is developed. Pasco County's Future Land Use Map (2015) indicates that the corridor is classified as mixed use in the western portion of the project area and residential in the eastern portion of the project area. SR 52 provides east-west mobility for many uses along the corridor and provides a connection from the communities of San Antonio, St. Leo and Dade City to and from I-75.

The Pasco County MPO's 2025 Transportation Plan (Cost Affordable Plan) indicates that SR 52, east of I-75, is planned to be a four-lane divided facility, while the Needs Assessment Plan indicates that this segment of SR 52 should be a six-lane divided facility. The traffic analysis was conducted to determine the need for improvements in order to provide an acceptable level of service on the road. The traffic analysis was based upon both AM and PM peak hour traffic conditions to the following analysis years: Existing Conditions – 2004; Opening Year – 2006; Interim Year – 2020; and Design Year - 2030.

2.0 EXISTING TRAFFIC VOLUMES

Roadway machine counts were conducted for a 72-hour (three day) continuous time period on SR 52 at three different locations starting on Tuesday, October 19, 2004 and ending on Thursday, October 21, 2004, for the following roadway segments:

- SR 52 between I-75 and McKendree Road
- SR 52 between McKendree Road and Emmaus Cemetery Road
- SR 52 to the east of Emmaus Cemetery Road.

The roadway machine counts at each location were averaged together and adjusted using the Peak Season Factor Category Report of 0.97 and the Weekly Axle Factor Category Report of 0.98 from the Florida Department of Transportation's 2003 Florida Traffic Information CD. Figure 5 provides the 2004 Average Annual Daily Traffic (AADT) Conditions on these segments of SR 52.

The 72-hour machine counts, the Pasco County Peak Season Factor Category Report, and the Weekly Axle Factory Category Report are provided in Appendix A, B and C respectively.

Peak hour traffic volumes were established by applying the K-30 and D-30 (directional distribution) to the 2004 AADT traffic volumes. The FTI 2003 CD provided a K³⁰ Factor of 9.32 and a D³⁰ of 56.84 for SR 52, east of I-75. Figure 6 provides the 2004 peak hour directional traffic volumes on SR 52.

In addition to the 72-hour machine counts, turning movement counts were conducted on the AM (7:00 AM to 9:00 AM) and PM (4:00 PM to 6:00 PM) peak hours on Wednesday, October 20, 2004 and Thursday, October 21, 2004 at the un-signalized intersections at Pasco Road, McKendree Road and Emmaus Cemetery Road.

The percentage of turning movements for both the AM and PM turning movement counts were applied to the PM peak traffic volumes from Figure 6. Figure 7 provides the 2004 PM peak hour traffic conditions based upon the PM peak hour turning movement counts. Figure 8 provides the 2004 AM peak hour traffic conditions based upon the AM peak hour turning movement counts. Copies of the PM and AM peak hour turning movement counts are provided in Appendix D.

3.0 TRAFFIC VOLUME PROJECTIONS

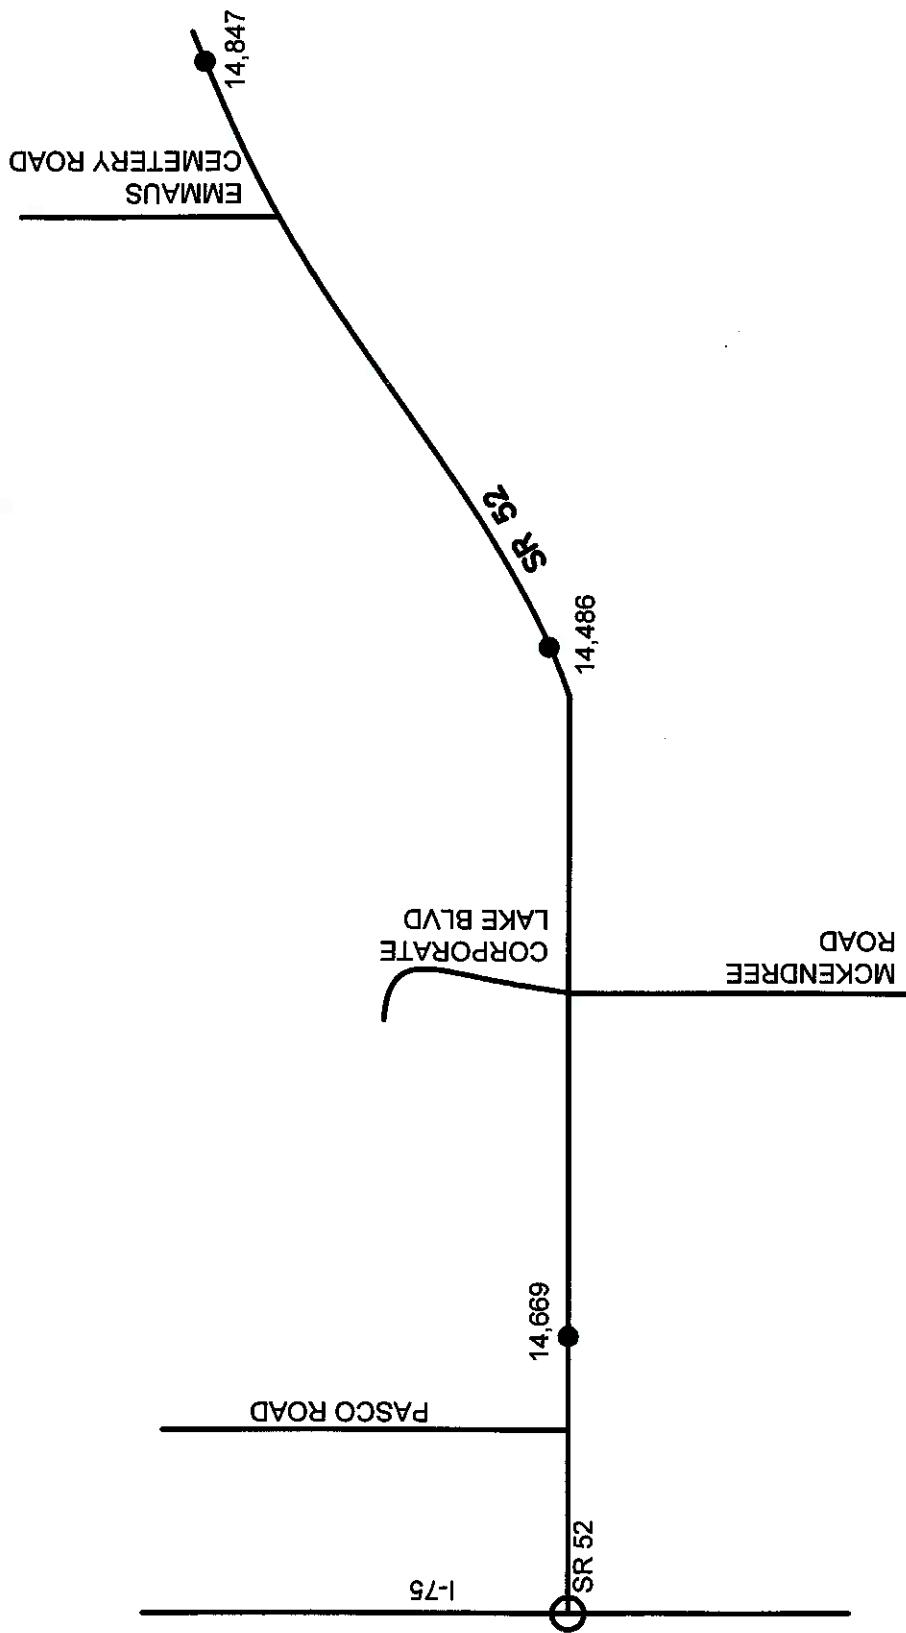

The Florida Department of Transportation, District VII, Systems Planning Office, provided future traffic conditions on this segment of SR 52. The 2025 socioeconomic data for the Tampa Bay Regional Planning Model (version 5.0)/FSUTMS was adjusted by the Systems Planning Office to ensure that the 2,564 dwelling units and the 1,564 employees associated with the Cannon Ranch DRI development project were incorporated into the 2025 socioeconomic data sets. Appendix E contains the traffic volumes projections provided by the Systems Planning Office.

The Final Route Study Report for the Clinton Avenue Extension prepared for the Pasco County Engineering Services Department by Reynolds, Smith & Hills, provides additional information on the extension of Clinton Avenue.

For this analysis, the Clinton Avenue forecasted traffic volumes were added to the SR 52 volumes for the eastern most segment of SR 52.

To obtain the peak hour traffic volume projections for years 2006, 2020 and 2030, the daily traffic volume projections provided by the Systems Planning Office were multiplied by the K³⁰ factor (9.32) and D30 factor (56.84). The percentage of turning movements for both the AM and PM turning movement counts were applied to the appropriate peak traffic volumes forecast.

Figures 9 through 14 provide the PM peak hour and AM peak hour traffic volumes for years 2006, 2020 and 2030.

4.0 ROADWAY LEVEL OF SERVICE

An analysis of the roadway link segments for SR 52 was conducted using the generalized service volumes from the 2002 Quality/Level of Service Handbook (Table 4-8, Areas Transitioning into Urbanized Areas, Class I). A copy of Table 4-8 from the Level of Service Handbook is provided in Appendix F. According to the Pasco County Comprehensive Plan, Transportation Element, the level of service (LOS) standard is "D" for the segment of SR 52, east of I-75.

Table 1 provides an analysis of the 2004 roadway peak hour traffic conditions using the generalized service volumes. Table 1 demonstrates that SR 52 currently meets the LOS Standard of "D" as a two-lane undivided roadway during the 2004 peak hour.

Table 1
2004 Peak Hour Directional Traffic Conditions

Roadway Link	Existing Geometry	Service Volume ¹	LOS Standard	2004 PM Traffic Volumes		LOS	
				NB/EB	SB/ WB	NB/EB	SB/ WB
<u>SR 52</u>							
I-75 to Pasco Rd	2LU	820	D	779	591	D	C
Pasco to McKendree	2LU	820	D	779	591	D	C

5.0 INTERSECTION LEVEL OF SERVICE

An analysis of the previously identified intersections on SR 52 was conducted using procedures from the 2000 Highway Capacity Manual (HCM) and Highway Capacity Software (HCS) for the AM and PM peak hours. Copies of the HCS analysis summary sheets are provided in Appendix G.

Table 6 provides the results of the un-signalized HCS analysis for the PM peak hour for the years 2004, 2006, 2020 and 2030. The PM peak hour un-signalized HCS analysis used the traffic volumes from Figure 7 (2004), Figure 9 (2006), Figure 10 (2020) and Figure 11 (2030). SR 52 was analyzed as a two-lane undivided roadway for the year 2004 and as a four-lane divided facility for the years 2006, 2020 and 2030 in this un-signalized analysis.

Table 6
PM HCS Un-Signalized Intersection Analysis

Intersection	2004 LOS	2006 LOS	2020 LOS	2030 LOS
SR 52 / Pasco Rd	EB Approach - A SB Approach - F	EB Left - B SB Approach - C	EB Left - C SB Approach - F	EB Left - E SB Approach - F
SR 52 / McKendree	EB Left - B WB Left - B NB Approach - E SB Approach - F	EB Left - B WB Left - B NB Approach - C SB Approach - C	EB Left - C WB Left - C NB Approach - F SB Approach - E	EB Left - D WB Left - D NB Approach - F SB Approach - F
SR 52 / Emmaus Cemetery Rd	EB Left - B SB Approach - C	EB Left - B SB Approach - B	EB Left - D SB Approach - C	EB Left - F SB Approach - E

The results of the PM peak hour HCS un-signalized analysis indicates that the eastbound and westbound movements on SR 52 will operate at an acceptable LOS for the years 2004, 2006 and 2020. For the year 2030, the eastbound and westbound movements on SR 52 do not operate at an acceptable LOS as a four-lane divided facility at the intersections of SR 52/ Pasco Road and SR 52/Emmaus Cemetery Road.

Table 7 provides the results of the signalized HCS analysis for the year 2030 for the intersections of SR 52/Pasco Road and SR 52/Emmaus Cemetery Road.

Table 7
PM HCS Signalized Intersection Analysis

Intersection	2020 LOS	2030 LOS
SR 52 / Pasco Rd	A	A
SR 52 / McKendree	A	A
SR 52 / Emmaus Cemetery Rd	-	A

Table 8 provides the results of the HCS for the AM peak hour for the years 2004, 2006, 2020 and 2030. The AM peak hour HCS analysis used the traffic volumes from Figure 8 (2004), Figure 12 (2006), Figure 13 (2020) and Figure 14 (2030). SR 52 was analyzed as a two-lane undivided roadway for the year 2004 and as a four-lane divided facility for the years 2006, 2020 and 2030.

Table 8
AM HCS Un-Signalized Intersection Analysis

Intersection	2004	2006	2020	2030
SR 52 / Pasco Rd	EB Approach - A SB Approach - F	EB Left - B SB Approach - D	EB Left - C SB Approach - F	EB Left - E SB Approach - F
SR 52 / McKendree	EB Left - A WB Left - A NB Approach - F SB Approach - C	EB Left - A WB Left - B NB Approach - D SB Approach - B	EB Left - B WB Left - C NB Approach - F SB Approach - C	EB Left - C WB Left - D NB Approach - F SB Approach - F
SR 52 / Emmaus Cemetery Rd	EB Left - A SB Approach - C	EB Left - B SB Approach - B	EB Left - C SB Approach - D	EB Left - D SB Approach - F

The results of the AM peak hour HCS analysis indicates that the eastbound and westbound movements on SR 52 will operate at an acceptable LOS for the years 2004, 2006 and 2020. The eastbound and westbound movements on SR 52 at the intersection of SR 52/Pasco Road does not operate at an acceptable LOS as a four-lane divided facility for the year 2030.

Table 9 provides the results of the signalized HCS analysis for the year 2030 for the intersections of SR 52/Pasco Road.

Table 9
AM HCS Signalized Intersection Analysis

Intersection	2020 LOS	2030 LOS
SR 52 / Pasco Rd	A	A
SR 52 / McKendree	A	B
SR 52 / Emmaus Cemetery Rd	-	A

For the intersections of SR 52/Pasco County Road and SR 52/McKendree Road, it is recommended that signal warrant studies should be conducted sometime between the years 2006 and 2020. It is recommended that a signal warrant study for the intersection of 52/Emmaus Cemetery Road should be conducted sometime between the years 2020 and 2030.

6.0 CONCLUSION

This report was prepared to satisfy the traffic analysis for the Project Development and Environment (PD&E) Study for the proposed widening of State Road 52 (SR 52) from a two-lane rural section to a six-lane urban section for the 1.9-mile segment east of I-75 prior to the year 2030. The roadway analysis indicates that SR 52 needs to be ultimately widened to a six-lane divided facility by the year 2030.

APPENDIX E

Traffic Volume Projections

XXX = AADT

**Notes:**

1. The current 2003 AADTs are from Florida Traffic CD
2. The 2004 AADTs are from Wilson Miller
3. The 2025 AADTs are converted from PSWADT 2025 Cost Affordable Model (TBRPM v5.0).
4. The 2020 AADTs are interpolated and 2030 AADTs are extrapolated data.

APPENDIX F

Generalized Service Volumes

TABLE 4 – 8
GENERALIZED PEAK HOUR DIRECTIONAL VOLUMES FOR FLORIDA'S
AREAS TRANSITIONING INTO URBANIZED AREAS OR
AREAS OVER 5,000 NOT IN URBANIZED AREAS*

UNINTERRUPTED FLOW HIGHWAYS						FREEWAYS											
		Level of Service						Level of Service									
Lanes Divided	A	B	C	D	E	Lanes	A	B	C	D	E						
1 Undivided	100	330	620	870	1,200	2 Undivided	1,290	2,130	2,890	3,420	3,800						
2 Divided	980	1,590	2,300	2,980	3,390	3	2,000	3,290	4,460	5,280	5,870						
3 Divided	1,470	2,390	3,460	4,470	5,080	4	2,700	4,450	6,030	7,140	7,940						
						5	3,400	5,600	7,610	9,010	10,010						
STATE TWO-WAY ARTERIALS																	
Class I (>0.00 to 1.99 signalized intersections per mile)																	
Level of Service						BICYCLE MODE											
Lanes Divided	A	B	C	D	E	(Note: Level of service for the bicycle mode in this table is based on roadway geometrics at 40 mph posted speed and traffic conditions, not number of bicyclists using the facility.) (Multiply motorized vehicle volumes shown below by number of directional roadway lanes to determine maximum service volumes.)											
1 Undivided	**	210	690	820	860												
2 Divided	240	1,470	1,730	1,810	***												
3 Divided	370	2,260	2,600	2,710	***												
Class II (2.00 to 4.50 signalized intersections per mile)																	
Level of Service						Paved Shoulder/ Bicycle Lane											
Lanes Divided	A	B	C	D	E	Coverage	A	B	C	D	E						
1 Undivided	**	**	560	760	810	0-49%	**	100	170	720	>720						
2 Divided	**	200	1,290	1,620	1,700	50-84%	**	130	210	>210	***						
3 Divided	**	320	2,000	2,430	2,560	85-100%	170	380	>380	***	***						
Class III (more than 4.5 signalized intersections per mile)																	
Level of Service						PEDESTRIAN MODE											
Lanes Divided	A	B	C	D	E	(Note: Level of service for the pedestrian mode in this table is based on roadway geometric at 40 mph posted speed and traffic conditions, not number of pedestrians using the facility.) (Multiply motorized vehicle volumes shown by number of directional roadway lanes to determine maximum service volumes.)											
1 Undivided	**	**	260	620	770												
2 Divided	**	**	620	1,440	1,630												
3 Divided	**	**	970	2,220	2,450												
NON-STATE ROADWAYS																	
Major City/County Roadways																	
Level of Service						Level of Service											
Lanes Divided	A	B	C	D	E	Sidewalk Coverage	A	B	C	D	E						
1 Undivided	**	**	370	720	770	0-49%	**	**	**	330	810						
2 Divided	**	**	870	1,550	1,630	50-84%	**	**	**	520	990						
3 Divided	**	**	1,360	2,330	2,450	85-100%	**	120	590	>590	***						
Other Signalized Roadways (signalized intersection analysis)																	
Level of Service						ARTERIAL/NON-STATE ROADWAY ADJUSTMENTS DIVIDED/UNDIVIDED											
Lanes Divided	A	B	C	D	E	Lanes	Median	Left Turn Lanes	Adjustment Factors								
1 Undivided	**	**	230	490	630	1	Divided	Yes	+5%								
2 Divided	**	**	540	1,070	1,270	1	Undivided	No	-20%								
Source: Florida Department of Transportation Systems Planning Office 605 Suwannee Street, MS 19 Tallahassee, FL 32399-0450 http://www11.myflorida.com/planning/systems/sm/los/default.htm																	
02/22/02																	
Increase corresponding volume 20%.																	
*This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Values shown are hourly two-way volumes for levels of service and are for the automobile/truck modes unless specifically stated. Level of service letter grade thresholds are probably not comparable across modes and, therefore, cross modal comparisons should be made with caution. Furthermore, combining levels of service of different modes into one overall roadway level of service is not recommended. The table's input value defaults and level of service criteria appear on the following page. Calculations are based on planning applications of the Highway Capacity Manual, Bicycle LOS Model and Pedestrian LOS Model, respectively for the automobile/truck, bicycle and pedestrian modes. **Cannot be achieved using table input value defaults. ***Not applicable for the level of service letter grade. For automobile/truck modes, volumes greater than level of service D become F because intersection capacities have been reached. For bicycle and pedestrian modes, the level of service letter grade (including F) is not achievable, because there is no maximum vehicle volume threshold using table input value defaults.
